This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

Chapter I.

AREA AND POPULATION.

The area of Bolivia, as hitherto published, presents an irreconcilable confusion of figures, ranging all the way from 106,180 to 832,176 English square miles. In his Nociones de Geografia de Bolivia, published at Sucre in 1889, Senor Justo Leigue Moreno gives the area of the country at 2,155,329 square kilometers, or 832,176 English square miles; The Hand Book of the American Republics, 784,554 English square miles; The Statesman's Year Book, 772,548 English square miles; The American Encyclopedia, 697,288 English square miles; The Encyclopedia Britannica, 536,200 English square miles; The Bolivian Delegate to the International American Conference, in his Railway Report, at 275,000 square kilometers, or 106,180 English square miles. The fact that no two of these authorities agree is perhaps explained, with the exception of the latter, which is clearly an error, by their including or excluding in whole or in part in their estimates the disputed territory claimed by the Republic. Hon. Manuel Vicente Ballivian, of La Paz, one of the most scholarly and distinguished authors of Bolivia, and until 1890 director of the Government Department of Boundaries, gives the official estimates of the area of the Republic, and how determined. Under date May 26, 1892, he says:

The total area of the Republic, not including the territory of El Chaco, claimed alike by Bolivia, Paraguay, and the Argentine, is 1,546,818.27 square kilometers, or 597,271 English square miles.

The area by departments is as follows:

Departments.	Area.
	Square kilos.
La Paz	443, 214. 05
Santa Cruz	327, 214. 26
Beni	260, 493. 89
Potosi	134, 932. 89
Tarija	89, 634. 65
Litoral	77, 286. 61
Oruro	55, 262. 28
Cochabamba	55, 486, 27
Chuquisaca	103, 293. 37
Total	*1, 546, 818. 27

*597,271 English square miles.

As to the manner of determining the area of the country he says:

We have thus accurately fixed it from maps I had prepared by Señor Eduardo Ideaquez, and according to treaties defining territorial demarcations, and from truthful documents from the Department of Boundaries, whose director I was until 1890.

In view of these facts, and until all disputed boundary questions are definitely settled, the area of Bolivia, as here given, may be accepted as authentic and substantially correct.

This gives to Bolivia an area greater than that of any single country in Europe, with the exception of Russia, and more than 7,500 square miles greater than that of the Kingdom of Great Britain, France, Germany, Greece, Switzerland, and Belgium combined. It will be observed, however, that the Litoral or Department of Atacama, having an area of 77,286.61 square kilometers or 29,840 square miles, is still in the possession of Chile, and will so continue until the question of its permanent disposition is determined.

POPULATION.

Statements of the population of Bolivia are also greatly at variance. By the census of 1854, the population was 2,326,126 inhabitants, viz:

Whites and Mestizos	634, 345
Indians	931, 781
Savage tribes (same as shown by the census of 1846)	760, 000
Total	2, 326, 126

As the census of 1854 is regarded in the country as substantially correct, it has been accepted as a safe basis for all subsequent estimates. In view of this and the partial, though perhaps less accurate, census of recent years, the population is fixed by the best Bolivian authorities, official and otherwise, at about 2,500,000 inhabitants. The population consists of native whites, chiefly descendents of the Spanish settlers, resident Europeans, Mestizos or Cholos (mixed white and Indian), and Indians of pure blood belonging to the Inca races, and in about the following proportions:

Whites	600, 000
Mestizos or Cholos	700, 000
Indians in a domesticated state	960, 000
Indians in a savage state	240, 000
Total	2, 500, 000

Chapter II.

TERRITORIAL DIVISIONS.

For the purposes of public administration, the territory of Bolivia is divided into four grand divisions, viz: First, Political and Military; second, Judicial; third, Ecclesiastical; fourth, University.

(1) POLITICAL AND MILITARY DIVISION.

The political and military division of the Republic comprises nine departments, 52 provinces, 374 cantons, and 205 vice-cantons, as follows:

DEPARTMENT OF CHUQUISACA.

Situated in southeastern Bolivia, capital Sucre, which is also the capital of the Republic, it embraces 4 provinces, 46 cantons, and 20 vice-cantons. Its provinces and their capitals are: Chuquisaca and Yamparaez, capital Yotata; Cinti, capital Camargo; Tomina, capital Padilla, and Acero, capital Sauces.

DEPARTMENT OF LA PAZ.

Situated in northwestern Bolivia, capital La Paz, it is composed of 9 provinces, 98 cantons, and 26 vice-cantons. Its provinces and their capitals are: La Paz, capital La Paz; Yungas, capital Chulumani; Larecaja, capital Sorata; Muñecas, capital Mocomoco; Caupolican, capital Apolo; Omasuyos, capital Achacachi; Pacajes, capital Corocoro; Sicasica, capital Sicasica; Inquisivi, capital Inquisivi.

DEPARTMENT OF COCHABAMBA.

Situated in central Bolivia, capital Cochabamba, it includes 9 provinces, 54 cantons, and 46 vice-cantons. Its provinces and their capitals are: Cochabamba, capital Cochabamba; Tarata, capital Tarata; Punata, capital Punata; Totora, capital Totora; Arque, capital Capinota; Ayopaya, capital Morochata; Chaparé, capital Sacaba; Mizque, capital Aiguile, and Tapacari, capital Quillacollo.

DEPARTMENT OF POTOSI,

In southwestern Bolivia, capital Potosi, is composed of 9 provinces, 66 cantons, and 54 vice-cantons. Its provinces and their capitals are: Potosi, capital Potosi; Porco, capital Huanchaca; Linares, capital Puna; North Chicas, capital Cotagaita; South Chicas, capital Tupiza; Chayanta, capital Colquechaca; Charcas, capital San Pedro; North Lipez, capital San Cristoval; South Lipez, capital San Pablo.

DEPARTMENT OF ORURO,

In western Bolivia, capital Oruro, is divided into 3 provinces, 20 cantons, and 18 vice-cantons, Its provinces and their capitals are: Oruro, capital Oruro; Paria, capital Poopó, and Carangas, capital Corque.

DEPARTMENT OF SANTA CRUZ,

Situated in eastern Bolivia, capital Santa Cruz de la Sierra, is divided into 6 provinces, 41 cantons, and 21 vice-cantons. Its provinces and their capitals are: Santa Cruz, capital Villa de Warnes; Sara, capital Portachuelo; Vallegrande, capital Vallegrande; Cordillera, capital Lagunillas; Chiquitos, capital San José, and Velasco, capital San Ignacio.

DEPARTMENT OF TARIJA,

In southern Bolivia, capital Tarija, comprises 5 provinces, 24 cantons, 22 vice-cantons, and 1 military colony. Its provinces and their capitals are: Tarija, capital Tarija; Concepcion, capital Concepcion; Mendez, capital San Lorenzo; Salinas, capital San Luis; Gran Chaca, capital Yacuiva.

The military colony of Crevaux, situated along the Pilcomayo River, embraces a large section of public lands assigned in fee simple to certain military officers in recognition of their public services.

DEPARTMENT OF BENI OR VENI,

Situated in northeastern Bolivia, capital Trinidad, comprises 3 provinces, 15 cantons, and 1 vice-canton. The provinces with their capitals are: Beni, capital Trinidad; Magdalena, capital Magdalena, and Secene, capital Santa Anna.

DEPARTMENT OF ATACAMA OR LITORAL,

The Pacific Coast province of southwestern Bolivia, capital Antofagasta. This province has been occupied by Chile since February 14, 1879.

(a) JUDICIAL DIVISION.

For the administration of justice, Bolivia is divided into 7 districts, viz: Chuquisaca, La Paz, Cochabamba, Potosi, Oruro, Santa Cruz, and Tarija. The Supreme Court sits at Sucre, the capital of the Republic, the superior courts in the capitals of the departments, and the inferior courts in the capitals of the provinces or in such other sections of the country as the due administration of justice may require.

(3) ECCLESIASTICAL DIVISION.

e established religion of the State is the Roman Catholic, le Republic forms an ecclesiastical province, composed of liocese and three dioceses, under the general supervision rchbishop and three bishops.

(4) UNIVERSITY DIVISION.

ducational purposes, Bolivia is divided into 5 university : First, Chuquisaca, comprising the departments of Chu- Potosi and Litoral; second, La Paz, comprising the de- ts of La Paz and Oruro; third, Cochabamba, which is to that department; fourth, Santa Cruz, embracing the ent of Santa Cruz, Beni, and Tarija.

Chapter III.

GOVERNMENT AND CONSTITUTION.

The Government of Bolivia is democratic and representative in form. The sovereign power resides in the nation, and its exercise is delegated to the legislative, executive, and judicial branches of the Government.

THE LEGISLATIVE AUTHORITY.

The legislative power is vested in the National Congress, composed of two Chambers, the Senate and House of Deputies. The Senate is composed of two members from each department, and the House of 64 deputies, with a corresponding number of alternates for both Chambers, who become acting members in the event of the death, disability or absence of their principals. One-third of the membership of the Senate and one-half of the membership of the Chamber of Deputies are elected every two years by direct vote of the people for six and four years, respectively.

The Congress convenes annually on the 6th of August, the anniversary of the declaration of Bolivian independence, formally signed and published August 6, 1825, by the first Congress then in session at Chuquisaca, now Sucre, the capital.

The constitution limits the annual sessions of Congress to sixty days, with the privilege of extending the same to ninety days, either upon its own motion or at the request of the Chief Executive.

The salary of Senators and Deputies is at the rate of $200

(bolivianos) per month during the session of Congress, and in addition, there is an allowance for traveling expenses based upon the number of leagues necessarily traveled in reaching the capital.

QUALIFICATIONS OF SENATORS.

To be eligible to the Senate the constitution provides: (1) That the candidate be enrolled in the National Registry of Electors; (2) that he be 35 years of age, and either a Bolivian by birth or a naturalized citizen with a fixed residence of five years in the country; (3) that he have an annual income of not less than $800 (bolivianos), the proceeds either of his profession, industry or real estate; (4) that he shall not have been condemned to corporal punishment by virtue of a sentence pronounced by the ordinary judicial tribunals of the country; (5) that he shall have resided in the Republic for the four years next preceding his election, unless absent in the public service.

QUALIFICATIONS OF DEPUTIES.

Except as to the qualification of age and income, which is 25 years and $400 (bolivianos), the same constitutional conditions of eligibility apply to Deputies as to Senators.

THE EXECUTIVE AUTHORITY.

The Chief Magistrate of the nation must be a Bolivian citizen by birth, having the qualifications of a Senator, and must exercise the executive power under the title of "President of the Republic," assisted by certain ministers of state who constitute his cabinet. He is elected for four years by direct vote of the people, but is not eligible to reëlection as his own immediate successor. The first and second Vice-Presidents, who must have the same qualifications as the President, are elected in like manner, and in turn, succeed to the Presidency in the absence, death or disability of the President, in which event they are disqualified for reëlection

to the office of either President or Vice-President for the period of four years next after the expiration of their term of office.

The President and Vice Presidents are inaugurated and enter upon their official duties on the 6th of August, the anniversary of Bolivian independence.

The President is assisted in the administration of his high office by a cabinet of five ministers, viz: Foreign Relations and Public Worship; Finance; Justice and Public Instruction; Interior, and War. In addition to the management of their several departments of the Government, these ministers unite with the President in authenticating with their signatures his proclamations, decrees, and other official acts.

The President is ex-officio Commander-in-Chief of the army, with the rank of captain-general.

The annual salary of the President is $18,000, with an allowance of $6,000 for incidental expenses; of the First Vice-President $6,000; of the Second Vice-President, $5,000, and of the cabinet ministers, $4,000 each.

THE JUDICIAL AUTHORITY.

Justice is administered by the Supreme Court, whose jurisdiction is co-extensive with the Republic, and by the superior courts and inferior tribunals of the seven judicial districts, into which the country is divided. The jurisdiction of the superior courts is co-extensive with their respective districts, and that of the inferior tribunals comprises the several divisions and subdivisions thereof.

The judges of the Supreme Court are nominated by the Senate and elected by the Chamber of Deputies.

In addition to the Supreme Court of five judges, which sits at the Capital, the organization of the judiciary is as follows:

DISTRICT OF CHUQUISACA.

One superior court of 5 members and 1 district attorney-general, located at Sucre; 14 judges of the inferior courts; 4 attorney-

generals; 4 assistants, and two or more parochial alcaldes in each canton.

DISTRICT OF LA PAZ.

One superior court of 5 members aud 1 district attorney-general, located at La Paz; 30 judges of the inferior courts; 10 attorney-generals; 8 assistants, and the requisite number of parochial alcaldes.

DISTRICT OF COCHABAMBA.

One superior court of 5 members and 1 district attorney-general, located at Cochabamba; 28 judges of the inferior courts; 9 atorney-generals, and 7 assistants.

DISTRICT OF POTOSI.

One superior court of 5 members and 1 district attorney-general, located at Potosi; 21 judges of the inferior courts; 6 attorney-generals, and 7 assistants.

DISTRICT OF ORURO.

One superior court of 3 members and 1 attorney-general, located at Oruro; 8 judges of the inferior courts; 3 attorney-generals, and 1 assistant.

DISTRICT OF SANTA CRUZ.

One superior court of 3 members and 1 attorney-general, located at Santa Cruz; 11 judges of the inferior courts; 2 attorney-generals, and 6 assistants.

DISTRICT OF TARIFA.

One superior court of 3 members and 1 attorney-general, located at Tarifa; 8 judges of the inferior courts; and 1 attorney-general, and 5 assistants.

LOCAL GOVERNMENT.

DEPARTMENTAL AND PROVINCIAL GOVERNMENTS.

With the exception of the municipal organizations the local governments of the Republic are mere subordinate departments of the executive branch of the General Government.

The President appoints the prefects or governors of the departments and the subprefects of the provinces, and they in turn the corregidores of the cantons and the alcaldes of the vice-cantons. The prefects are the chief political, administrative, and military authorities of their respective departments.

MUNICIPAL GOVERNMENT.

The administration of municipal affairs is uniform throughout the Republic. The municipal council of each department capital constitutes the supreme municipal authority of the department. Those of the provincial capitals and inferior towns down to the municipal agents, resident in the rural districts of the cantons, are dependent thereon.

Chapter IV.

PUBLIC INSTRUCTION.

Public instruction in Bolivia is divided into three general departments, viz: Primary, secondary, and superior.

The schools of the primary department are under the immediate control of the municipal governments to which they severally belong, and constitute the common or free-school system of Bolivia. Their number and location are fixed and their teachers employed by their respective city councils. Attendance thereon is compulsory, but is not enforced against the Indians, who have a strong aversion to education. These municipal schools are in session about eleven months in the year.

The secondary department embraces the colleges and lyceums of the Republic, which are under the control of the universities, and whose professors are named thereby. The course of study in this department covers six years of ten months each.

The superior department embraces the universities of the Republic, in which are taught theology, law, and medicine, and whose course of study covers four, five, and seven years, respectively, of ten months each.

For the better administration of the Bolivian system of public instruction and in order to foster a national spirit of education and encourage the Bolivian youth in the study of the learned professions, the chief authority thereover is vested in a Minister of Justice and Public Instruction, who is a member of the President's Cabinet. To the same end, there is located in the capital of each

university district viz, in the cities of Sucre, La Paz, Potosi, Cochabamba, and Santa Cruz, a national university presided over by a Chancellor and University Council, appointed by the Government, who exercise supervisory control over all subordinate educational institutions within their respective districts. This central authority maintains a local delegate in each province, except that in which the university is located, whose duty, among others, is to certify promotions and to transmit in proper form to the Chancellor the graduating papers of those who, having taken the six-years course in the secondary department, seek admission to the university of his district.

The total number of municipal, private, and parochial schools in the Republic, going to make up the primary department of public instruction, according to the statistics of 1890, is 493, with 649 teachers and 24,244 students of both sexes, of whom 6,840 are girls. The secondary department has 16 colleges and lyceums with 2,126 students and 91 professors. The superior department embraces 5 universities in which 511 students are engaged in the study of law under 24 professors; medicine, 105 students with 12 professors; theology, 768 students with 47 professors, making a total of 1,384 students and 83 teachers. The total number of students in all the departments is 27,754 and of teachers 823. In addition to the schools above enumerated, the Government established, in 1890, 1 military school and 2 industrial colleges in the city of La Paz, which give promise of becoming important factors in the educational system of the Republic. The military and industrial schools and those of law and medicine are supported by the state.

Chapter V.

RACES, LANGUAGE, AND CLASS DISTINCTIONS.

RACES.

The inhabitants of Bolivia may be properly classified as whites, Quichuas, Aymaras, and Chunchos.

The white race embraces the people of foreign extraction, and is chiefly composed of the descendants of Spaniards.

The Quichua race is numerically the strongest in the Republic. These Indians are mainly confined to the Departments of Chuquisaca, Cochabamba, Potosi, Oruro, and that portion of the Department of La Paz skirting the northeastern shores of Lake Titicaca, and thence spread over the interior provinces of Peru. They do not differ materially from the Aymaras, except that they are perhaps more highly civilized by reason of living more generally in the great centers of population, where they are extensively employed either as servants in the houses or as laborers in the mines of the better classes.

The Aymara race is confined almost exclusively to the Department of La Paz, the center of the ancient Collas tribes, now extinct with the exception of a small remnant constituting the community of Collana, nine leagues south of the city of La Paz.

The Aymaras are the indigenous inhabitants of the high plains of western Bolivia. Although these Indians are now civilized, they adhere closely to the customs of their ancestors. They are exceptionally good farmers, intelligent mechanics, devout Catho-

lics, and make up the great bulk of the agricultural and pastoral population of the Lake Titicaca region, the most elevated table-land on the American continent or on the globe, with the single exception of that of Thibet.

The Chuncho race, though limited in numbers, occupies a greater area than either the Quichuas or the Aymaras. These Indians are located chiefly in the interior of the eastern departments of Bolivia, viz, Chuquisaca, Santa Cruz, and Beni. They are also met with in the remote provinces of the departments of La Paz and Cochabamba, but under various local names. The Chunchos for the most part are semicivilized, and, like the Aymaras and Quichuas, are industrious and, except when their savage natures are aroused with alcohol, which they in common with the other two tribes drink to great excess, are gentle and peaceable, though rarely hospitable to strangers.

The origin of these three races has long been an interesting study. Orbigny, the French naturalist, maintains that this portion of South America was peopled by a single race, which he calls by the comprehensive name of Antiperuvian; while Tschudi, on the contrary, maintains that the empire of the Incas was inhabited by three distinct peoples, viz, the Quichuas, Aymaras, and Chunchos. This classification is now generally accepted.

LANGUAGES.

There are numerous languages and local dialects spoken in Bolivia. The language of the white people, is Spanish. There are few, however, who do not speak with almost equal fluency Quichua or Aymara, or both, having acquired these tongues as children from the Quichua and Aymara servants, who are as common to the domestic circles of the Bolivian home as were the colored people of the South to the homes of their masters in the days of slavery. The Indians of the Department of La Paz speak Aymara; those of Chuquisaca, Potosi, Cochabamba, and

RUINS OF THE PALACE OF THE INCAS.

Oruro speak Quichua, while a large proportion of those living in the capitals and larger towns speak Spanish as well. The Chunchos speak the local dialects of their respective tribes.

Peruvian and Bolivian philologists have devoted much study to the Aymara and Quichua languages, and a few of them have even published grammars of these distinct though cognate tongues, now gradually disappearing from the spoken languages of the Republic in the slow processes of its development.

In the present unexplored condition of vast areas of the country, known to be densely populated by savage tribes, it is impossible to determine the number, much less the origin, of the dialects spoken in Bolivia.

In the provinces of Mojos and Chiquitos alone there are remnants of perhaps twenty nations, speaking different dialects.

According to Dr. Agustin Aspiazu, an eminent scholar and author of La Paz, the Araonas and Guarayos (inhabiting the districts of Madidi, Undumo, and the left banks of the river Madre de Dios, in Caupolican, the northwestern province of the Department of La Paz) speak the Araona; the Guacanaguas, Toromonas, and Caviñas speak the Cavineño dialect; the converts of the missions of Ixiamas and Tumupasa and the pueblos of Aten, Apolo, and Santa Cruz del Valle Ameno, speak Tacana.

The right bank of the river Beni, in the department of Beni, according to Reverend Father Nicolas Armentia, is inhabited exclusively by the Pacaguaras and Chacobas savages, who speak the Pacaguara dialect. The Chimanes, inhabiting the southwest of this department, and their neighbors, the Mosetenes, dwelling in the northern districts of the province of Yungas in the department of La Paz, speak Tacana. The Itenez Indians, along the river Guaporé, marking the northern boundary of the department of Beni, speak the Itonama, while the Sarabecas, Guarayos, and kindred tribes occupying its southern districts adjoining the department of Santa Cruz, speak a dialect derived from the Guarani, a

native tongue of Paraguay, the same as do the Chiriguanos, Samucos, Chamacocos and other tribes in the province of Cordillera, to the south of the department of Santa Cruz. The Chiquitos, of the provinces of Chiquitos and Sara, in the central and western sections of this same department, speak Chiquitana. The Yuracares, in the northern districts of the department of Cochabamba, speak a dialect bearing the name of their tribe.*

CLASS DISTINCTIONS.

As constituent elements of society, the four general divisions of the population of Bolivia, viz, white, aymara, quichua and chuncho, are separated into three classes: the higher classes, of European descent; the middle classes, or Cholos, in whose veins flow European and Indian blood; and the lower classes, or Indians.

The higher classes are engaged in the professions, in mercantile business and in the higher grades of the military service; the middle classes, or Mestizos, better known in the country under the general name of Cholos, are the tradesmen, the small shopkeepers, and the soldiers of the country; while the lower classes, or Indians, are the farmers, the miners and the day laborers, although many of them are expert masons, bricklayers and plasterers.

* The fierce tribes of the Chaco, as the Tobas, Noctenes, Chorolis, Guisnas, and others of the southern districts of the Department of Chuquisaca, speak special tongues not met with among the other tribes of the Republic.

Chapter VI.

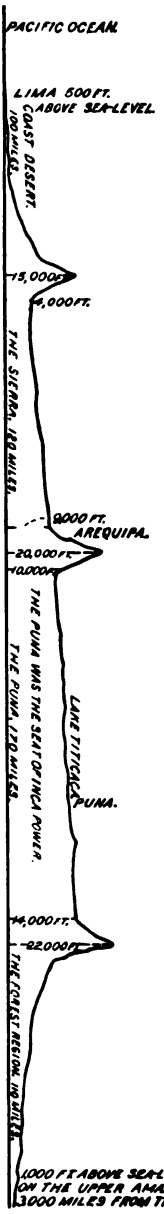
PHYSICAL AND TOPOGRAPHICAL FEATURES.

Bolivia possesses two distinct regions, namely, the Sierra, or mountainous region of the western half of the Republic, where the principal settlements are located, and the Montaña, a vast, low plain, embracing the tropical forests and sparsely settled districts of the eastern part.

THE SIERRA.

The Sierra—which has a cold or mild climate, according to the varied elevations of its high ranges, its valleys, and its tablelands—is divided into two well-defined sections, namely, that embracing the lofty ranges of the Andes and that comprising the high plains of the Titicaca Basin.

The Andes Range, on entering Bolivia from the northwest, divides into two branches. The principal range, called the Cordillera Real, which marks the regions of the rich mineral districts of Bolivia, runs southeast through the departments of La Paz, Cochabamba, and Potosi, with minor cordilleras diverging toward the low plains of the east, where they disappear. The Western or Coast Range continues on south to the Straits of Magellan, after reuniting with the Eastern Range, on the southern frontier of Bolivia, in latitude 22° south.



In that portion of the eastern chain within the limits of the department of La Paz are found the highest mountains of the American continent, and one of the greatest continuous snow ranges in the world. The culminating peaks of this range, which has an average altitude of about 20,000 feet, are the Illimani, Mururata, Huaina-Potosi, Illampu or Sorata, and the Sunchuli. Of these, the Illampu, having an altitude of from 25,000 to 27,000 feet, according to the estimates and measurements of different observers, is the highest mountain of America, and, except Mount Everest, is the highest in the world. About 125 miles to the south, stands the Illimani, at an altitude of 24,500 feet, while midway between, rises Huaina-Potosi, the third great peak of this uninterrupted chain.

Deep and fertile valleys, possessing a semi-tropical climate, occasionally intersect this elevated region and mark the location of the best farming and fruit-growing districts of this part of Bolivia.

Standing boldly out upon the elevated plateau of the Department of Oruro and rising to an altitude of 23,000 feet, is the beautiful and majestic Sajama, whose snow-covered slopes and smoking crater make it the most conspicuous mountain of the western chain. From the base of this mountain, as from that of the adjacent Pachatas (twins), flow numerous streams of hot water used by the natives for cooking. Beyond, are the volcanic peaks of Pomarapa and Tacora, and farther south Chorolque, another of the chief pinnacles of the Western Cordilleras.

THE HIGH PLAINS OF THE TITICACA BASIN.

Between these two principal ranges and at an altitude of from 12,000 to 13,000 feet above the sea, are situated the highlands of Bolivia, known as the Altiplanicie, connected with the plateau of Puno, Peru, on the north, and that of the Argentine Republic on the south, and varying in width, east and west, from 20 to 50 leagues. A careful observer thus describes this region:

> This plateau forms the most elevated table-land on the globe excepting that of Thibet. The latter, however, presents only mountain pastures covered with sheep, but the table-land of the New World supports towns and populous cities and affords food for numerous herds of cattle, llamas, vicuñas, and sheep, and is covered with harvests of cereals at an elevation which has nothing to equal it in any part of the world.

The Department of Oruro and the western territory of the Departments of La Paz and Potosi mark the highest regions of these elevated plains, so remarkable not only among the physical features of Bolivia, but of the entire globe. The basins of this extended plateau inclose a continental water system, in manyrespects the most unique and interesting in the world.

LAKE TITICACA AND THE DESAGUADERO.

Here, at a mean level of 12,488 feet above the sea, is Lake Titicaca, almost as large as Lake Erie, and the most elevated sheet of fresh water in the world. This lake, which lies partly in Peru, is 120 miles long and from 30 to 50 miles wide, and, according to Prof. Alexander Agassiz, who took more than sixty-five soundings in various parts, has an average depth of about 100 fathoms. The well-defined and easily traced terraces of its ancient shores leave no room to doubt that Lake Titicaca, within a comparatively recent geological period, formed a vast inland sea, extending pos-

sibly east and west from Puno, Peru, to the heights above La Paz, and from north to south the full length of the great inter-andean plains of Bolivia and Peru. If its water level, as indicated by its ancient shore lines, "had an elevation of at least 300 or 400 feet higher than at present," as claimed by Prof. Agassiz, then the presence of such a vast inland sea as described is made reasonably certain.

The watershed between the rivers leading to the headwaters of the Amazon and those flowing into Lake Titicaca and the Desaguadero River is formed by the great snow range of the Eastern Cordillera sweeping northward from the Illimani to the Illampu, which stand like giant sentinels overlooking its silver crest.

Two hundred and eighty miles to the south of Lake Titicaca, is Lake Poopó or Aullagas, which, although without any known outlet, receives the drainage of Lake Titicaca through the Desaguadero River. Its area is approximately 30 by 50 miles, and it is of sufficient depth for steam navigation at all seasons of the year.

The line of steamers traversing Lake Titicaca run as far south as the town of Desaguadero, the head of navigation on the Desaguadero River. From here, smaller steamers, engaged in bringing up the silver and tin ores of Oruro and the copper of Corocoro, descend to a point 40 miles below. In order to facilitate the transportation of these metals to Puno, the lake terminus of the Mollendo and Puno Railroad, and to meet the competing rates offered by the Antofagasta Railway Company, which has just completed its line to Oruro and is building it on to La Paz, the Peruvian Corporation has secured a concession from the Bolivian Government to canalize the Desaguadero so as to extend navigation some 200 miles farther south, or within about 10 miles of Oruro.

When this important enterprise has been completed, and the shores of Lake Titicaca and the Desaguadero are touched, as they will be, at all points by steamers plying their waters for a distance

of more than 350 miles, their adjacent districts are reasonably certain to become the scenes of great commercial activity. The great copper-mining district of Corocoro and the silver and tin mining districts of Oruro, even with their present limited development, can furnish an enormous traffic for this line. When, however, these, in common with the extensive silver and lead districts of Sotalaya to the north and the rich gold fields beyond, are made to yield their metals in proportion to their capacity, these sacred waters of the Incas will be freighted with enormous contributions from Bolivia to the world's mineral and industrial wealth.

THE MONTAÑA OR EASTERN DIVISION.

Eastern Bolivia comprises all the territory east of the Andes and extending from the Pilcomayo River on the south to the northern limit of the Republic. It embraces the extensive departments of Santa Cruz and Beni, and the tropical and semi-tropical provinces of La Paz, Cochabamba and Chuquisaca. This is the region of the great tropical forests and navigable rivers of Bolivia. The country is generally level, rising almost imperceptibly from an altitude of 300 feet along the Paraguay River to 3,000 feet above sea level along the foot hills of the Cordillera. These low tropical plains, which seem to be a continuation of the Argentine pampas, inclose vast territories of prodigious fertility and endless forests of valuable timber of the varieties already mentioned, and, according to Col. George Earl Church, an eminent New York engineer, are traversed by not less than 3,000 miles of rivers adapted in a high degree to steamboat traffic, which converge like the arms of a fan upon the head of the falls of the Madeira to make this the main affluent of the Amazon.

To these 3,000 miles of navigable waters flowing north to the Atlantic, must be added the navigable outlets afforded by the Paraguay and the Pilcomayo flowing south to the same ocean.

The principal Bolivian affluents of the Madeira are four in

number, viz.: the Beni or Veni; the Rio Madre de Dios or Mayulata; the Mamore and the Stenez or Guapore. These rivers have more than one hundred branches, navigable in great part for steamers, while all may be traversed by small craft. These splendid rivers would long since have been opened to the commerce of the world but for the difficulties offered by the rapids of the Madeira. These falls and rapids are 19 in number and extend for 230 miles along the great bend of the Madeira at the northeast boundary of the Republic. Fourteen of them are in Brazil, while through the center of the upper five passes the boundary line between that country and Bolivia.

In order to enlist the co-operation of Brazil in some adequate scheme for overcoming this formidable obstruction, the Bolivian Government, on the 27th March, 1867, effected a "Treaty of friendship, limits, navigation, commerce, and extradition" with that country, which was formerly ratified by the Bolivian Congress the following year.

As early as November 5, 1833, under the administration of Gen. Andres Santa Cruz, the Government issued a decree offering a reward of $10,000 to $20,000 to the first person who, in a steamer, reached Bolivia from the Atlantic Ocean by way of any of the rivers of the Republic that run from south to north, and from $5,000 to $10,000 to the first who, in a similar craft, navigated from the same ocean to the territory of the Republic by the rivers which run from north to south.

On the 2d of June, 1843, under the administration of Gen. José Ballivian, another decree was issued authorizing the Executive Power to adopt such measures and incur such expense as might be deemed necessary to realize the navigation of all the navigable rivers of the Republic.

For the purpose of further inviting the attention of other nations to the importance of opening the rivers of the Republic to the commerce of the world, the decree of January 26, 1853, under

the administration of President Belzu, after reciting in a lengthy preamble the advantages to flow from such a result, declares—

(1) The Government, in consequence, has desired to call the attention of the entire world to the magnificent banquet of agricultural, mineral, and industrial productions, as rare as they are precious, with which these privileged regions greet the labor and civilization of man.

(2) That the south and east of the Republic incloses vast territories of prodigious fertility traversed by navigable rivers, which, flowing to the Amazon and the Plata, offer the most natural highways for the commerce, population, and civilization of these districts.

(3) That the navigation of these rivers is the most efficacious and certain [means] for the development of the riches of these lands, placing them in contact with the exterior, and applying to their wants the fructifying principle of liberty, as useful to the interests of the Republic as to those of the whole of humanity.

That these are no vain words is established by the explorations and publications of eminent scientific men. Preëminent among those who have confirmed this view of the Bolivian Government, is the eminent French naturalist, M. Alcide d'Orbigny, to whom reference has heretofore been made. In his "Descripción de Bolivia," published in Paris in 1845 for the Bolivian Government, in speaking of the falls of the Madeira, between Guajara-Merini and San Antonio, he says:

Once all these obstacles are overcome, whichever side is penetrated, be it by the river Paraguay or by the river Madeira, an immense labyrinth of navigable rivers present themselves upon that superficies, where ocean-going vessels and steamers of the greatest possible dimensions can navigate, everwhere developing commercial relations.

Colonel Church, in his report to the governments of Bolivia and Brazil in 1877, in commenting upon the views of this distinguished naturalist says:

If the mind of d'Orbigny thus measured the capacity of these rivers, that of the great savant, Lieut. M. F. Maury of the Washington Observatory, was none the less observant of their commercial importance.

And then he adds his own confirmation of these flattering re-

ports sent abroad by the Government and thus emphasized by M. d'Orbigny, Lieut. Maury, and other eminent travelers and scientists.

It is not practicable to here enter upon the history of the various projects proposed for placing these commercial affluents of the Amazon in direct communication with the sea. It is sufficient for the purposes of this sketch to say that, although the melancholy failure attending these projects has given to their history a tinge of pathos, they have none the less confirmed the words of d'Orbigny who declares in his "Descripción de Bolivia," that

The direction which Bolivia should take for the exportation of its products to the markets of the world is indicated by its navigable rivers.

THE SOUTHEASTERN PROVINCES OF BOLIVIA.

By the southeastern provinces, as here considered, is meant the territory lying between the Andes and the Paraguay River to the east, and stretching from the Itenez or Guaporé River, at the northeast boundary of the department of Santa Cruz, south to the Pilcomayo and the boundary between Bolivia and Paraguay.

According to Mr. John B. Minchen, a proficient English engineer, who has made extensive explorations in this and other parts of the country, this region, though generally flat and wooded, is slightly undulating, with vast areas of open grazing lands, while here and there, it is broken by isolated groups and ranges of hills. The most important tributary of the Amazon in this region is the Rio Grande, at the intersection of which with the post roads between Sucre and Cochabamba, President Arce has constructed, at his own expense, a costly suspension bridge. This bridge, which was finished and opened for traffic in 1891, is the most important engineering work in Bolivia, except the Antofagasta Railway bridge over the river Loa, which has a total length of 800 feet and a height of 336 feet 6 inches from water to rails.

There are many smaller rivers within this territory, such as the

San Miguel, Tucavaca, San Rafael, Agua Caliente, and the Otuguis, while numerous mountain streams course along the foot hills in all directions. Lakes Concepcion, Uberaba, Gaita, and Mandiore are the only known sheets of water within the limits of this sparsely settled and imperfectly explored region.

Along the base of the mountain ranges, especially of the Sunsas, are fine virgin forests, while the lake districts of the Province of Chiquitos contain the choicest pasture lands of this part of Bolivia. The country bordering the upper Paraguay is covered with extensive palm forests occupying, for the most part, the low lands subject to occasional slight inundations, but which afford excellent grazing by burning off from time to time the tangled grass and undergrowth.

From this point on south to the Pilcomayo River, these palm forests continue to skirt the banks of the Paraguay. The country along the left bank of the Pilcomayo, which comprises the extension of the Argentine pampas known as the Gran Chaco, possesses vast bodies of excellent grazing lands as far north as latitude 20° 20′ S.

The country from Lake Concepcion, in the central portion of the Department of Santa Cruz, east to Lakes Uberaba, Gaita, and Mandiore, which have their outlets to the Paraguay, is exceptionally well watered, and therefore marks the most fertile portion of the province of Chiquitos. Running northwesterly from Lake Concepcion to San Javier, is a low range of hills, while to the west, a continuous forest-clad plain extends to the Rio Grande. To the north, the country is slightly undulating and to some extent open, but in approaching the river Itenez or Guapore, a dense forest is met with, which continues in a northeasterly direction to the vast Brazilian province of Matto Grosso. The plains in the vicinity of Santa Cruz are to some extent open, but the slopes of the Andes, a few leagues to the west, everywhere abound in vast virgin forests. In addition to the districts thus described,

there are extensive regions of choice arable lands, where may be grown all the products common to a tropical zone, while the mountain spurs are everywhere peculiarly adapted to the production of the finest quality of coffee.

The territory adjacent to the Rio Grande, and extending northeasterly to the river Piray, presents not only a charming landscape, but is unexcelled for growing sugar cane, maize, and kindred productions. In the province of Chiquitos and other districts, cotton and indigo grow wild, while large quantities of the finest quality of vanilla are found in the same state in the swamps. The forests are the homes of a great variety of tropical birds of rare and beautiful plumage; the flora and fauna are of surpassing interest; medicinal plants of great value and almost every variety of rare and beautiful cabinet woods grow untouched in these virgin forests and uninhabited plains; while the charming valleys of Cochabamba are rich in cereals, and the province of Yungas is a vast storehouse of semi-tropical wealth. Not only has nature thus distributed these rich gifts of her bounty throughout the regions of eastern Bolivia with unrestrained prodigality, but, in the language of Col. Church, "there is abundant evidence that not a river that carries its waters from Bolivia to the Amazon but washes through auriferous deposits as rich as any in California or Australia," while the hills of San Javier have been producing gold for many years, and it is believed that when these remote sections of the country are properly explored and prospected, extensive deposits of this precious metal will be discovered.

THE BENI COUNTRY.

The Department of Beni, or Veni, as it is sometimes written, is one of the largest and most sparsely settled political divisions of the country. Its capital is Trinidad, situated on the river Mamoré, in the province of Mojos or Cercado. It embraces the provinces of Mojos or Cercado, Secure, Magdalena, Reyes, and

Chacobos. As the limits of its northwestern provinces are not well defined nor determined, "the Beni country" is therefore generally understood in the country as embracing the vast unsettled regions of northern as well as northeastern Bolivia, and is so represented in various maps of the country and will be so considered here. The total population of this section, not including the savage Indians, is estimated at more than 22,000 inhabitants, about two-thirds of whom are the descendants of the ancient Indian tribes known as the Mojos, Itonamas, Canichanas, Baures, Mobimas, Cayubabas, etc., and among whom the Jesuits in the last century established a number of missions.

The valleys of the Iruyani, Machupo, and the Madre de Dios, called by the Tacana Indians "Mayutata," or serpent river, and by Quichua tribes the "Amaru-Mayu," are occupied by various savage tribes, among which are the Araonas, Pacaguaras, Toromonas, Cavinas, Chacobos, Sirianos, and Simonianos, supposed to number about 20,000 inhabitants, but as numerous tribes or divisions also live along the shores of the Purus River and others inhabit the more remote regions of this part of Bolivia, their total number is unknown. Some of these tribes, according to Padre Fidel de Codinach, a Spaniard and a distinguished Franciscan friar from La Paz, who lived and traveled much among them, are cannibals and exceedingly immoral.

A translation from the journal of Padre Fidel de Codinach, who, in 1860, starting from the Franciscan Mission of Caviñas on the Madidi River, penetrated northwest as far as the Madre de Dios, a distance of about 150 miles, thus describes the country traversed:

With reference to the lands occupied by these tribes, they are unsurpassed in beauty, as much for their topography as for their fertility and richness. They occupy a broad space, about 4 degrees of latitude and about 8 or longitude. The position is exceedingly agreeable—now extensive groves, which are suddenly replaced by delightful pasture lands, now brooks, rivers, and ponds filled by numerous classes of fish. The most perfect salubrity of climate exists, despite the warm temperature. The groves are delightful and filled with all

that gives pleasure, the leafy and productive almond tree, the aromatic gum, and the palm, ranging from the highest to the lowest, from the royal to the smallest. Hidden riches exist in these lands, grateful and filled with perfume, gum and wax abundant and varied. Here are found cabinet woods, medicinal plants, and products rich and appreciable, and many other valuable productions, without mentioning the great mineral wealth of the district.

This part of Bolivia is watered by the greatest rivers of the Republic. Chief among them are the Beni and Mamoré, which form the Madeira, the former having its headwaters in the eastern slopes of the Cordillera of the department of La Paz, and the latter in the departments of Cochabamba and Santa Cruz; the Itenez or Guapore, formed by the rivers which descend from the northern districts of Santa Cruz and from the province of Matto Grosso, Brazil; the Madre de Dios, which rises in the mountains range of Paucartambo, to the east of Cuzco, Peru, and flows into the Beni; and the Purus, which rises farther north in the same general range and flows direct to the Amazon. Although these rivers offer every facility for steam navigation, their use is limited for the most part to Indian balsas or canoes.

At present, steam navigation is applied to the following rivers: First, the Beni from a point above the rapids of Esperanza, located about latitude 10° 40′ S., on up to the rubber districts of Salinas, the port of Reyes, a distance of about 130 miles; second, the Rio Madre de Dios from its confluence with the river Beni up to the rubber establishment of El Carmen, about 200 miles from Villa Bella; third, the Mamoré River from Villa Bella, the head of the rapids, to Trinidad, a distance of about 300 miles, and thence as far as its confluence with the Chapare. During the rainy season, navigation is continued on up the Chapare to the port of Coni, in the department of Cochabamba, and by the river Sara or Piray to Cuatro Ojos, in the department of Santa Cruz. The various affluents of these rivers are navigated by the Indians, who, rowing against a current of 2 miles per hour, ascend them

in boats, carrying from 5 to 6 tons of freight, at an average of 3 miles per hour, while they descend at the rate of about 9 miles per hour. The banks of these rivers are more or less elevated, while spreading out along their shores, and often extending for many leagues into the interior, are magnificent forests of the finest qualities of cabinet woods known to the lumber districts of the world. These rivers afford the only means of communication between the Beni country and the rest of the Republic, while they connect the eastern part of the country with the Atlantic Ocean by means of the Amazon. Vast quantities of Bolivian rubber are annually brought down these rivers to Villa Bella and here transferred to canoes by the Indians and carried past the 230 miles of falls and rapids of the Madeira to San Antonio, the terminus of steam navigation between Para, 700 miles below, and the upper Amazon tributaries.

Although this region is hot, having a temperature ranging from 27° to 32° C., it is nevertheless healthful. So equable is the climate, that the changes of seasons are hardly noticeable, while the transition from summer to winter is chiefly marked by copious rains, which so increase the rivers that the low plains of the Beni are converted for the time into vast lagoons, which are navigated by canoes during this season. Here, in this remote and perhaps least known region of South America, whose flora and fauna equal if they do not excel those of Brazil, are innumerable birds of rare and exquisite plumage, myriads of butterflies of the most delicate hues, every variety of fish known to frequent inland waters, rich river valleys and hilly districts unsurpassed in their wealth of soil, agricultural products, medicinal plants, aromatic gums and spices and auriferous deposits, while in its rich meadows, graze more than 600,000 head of splendid cattle worth in the country but from $2.50 to $3 per head, or about 5 bolivianos.

Bordering the Purus River, and spreading over the districts of Mapiri and Tipuani to the west and the river districts of the Beni

to the east, and on down through the rich province of Yungas to the south, are the finest tropical forests within the Amazonian basin, containing in all sixty-five kinds of rare and beautiful cabinet woods of prodigious growth and great commercial value. In the warm valleys of Mapiri and Yungas, and especially in the latter, grow enormous quantities of tropical fruits, sugar cane, rice, coffee, coca, cocoa, tobacco, and aromatic gums and spices, while skirting the banks of the Itenez or Guapore, the Beni, Madre de Dios and the Purus rivers, are the great rubber forests where is produced the finest "Para rubber" known to the trade.

Although the northern and northeastern territory of Bolivia, here denominated "the Beni country," is by common consent "a land flowing with milk and honey" whose inhabitants, according to George Earl Church, "gaze upon a wealth sufficient to pay the national debts of the world," it is for the most part as little known to the world as "Darkest Africa," and under present conditions, its vast natural wealth is even less available.

In point of time and means of communication, it is, with the exception of Santa Cruz, farther from the chief centers of Bolivian population than the latter are from the United States or Europe. So remote and difficult of access is this region, that Señor Lucio P. Velasco, a rubber merchant of Trinidad, on a recent trip, chose, rather than endure the hardships of a six weeks' to two months' overland journey, to travel via the Mamore, Madeira, and Amazon rivers to the Atlantic Ocean; thence to Colon and across the Isthmus of Panama; thence down the Pacific coast to Mollendo, Peru; thence across Peru by rail to Lake Titicaca, and thence by steamer back again into Bolivian territory at the end of a ninety days' journey.

Chapter VII.

CLIMATE AND SEASONS.

Bolivia, in common with other mountainous regions of South America, has three general divisions: *tierras calientes* or *calidas*, *tierras templadas*, and *tierras frias*, a hot, temperate, and cold region. Situated within that part of the torrid zone lying between 8° south of the equator and the tropic of Capricorn, and traversed from northwest to southeast by the highest mountains of the Andean range, it necessarily posseses a great variety of climate. In a general sense, the eastern part is hot and humid, the central cordillera system cold, while the climate of the high plains (altiplanicie) of the western division assimilates that of the temperate zone.

As a whole, the climate is mild and salubrious. In the highlands or elevated regions of the Titicaca basin, where the principal centers of both urban and suburban population are located, the climate is remarkably healthful, though the extremes of temperature between day and night demand corresponding caution to avoid colds and consequent pneumonia. While smallpox is endemic to this region it is rarely epidemic, and, except in cases of black smallpox, which are of infrequent occurrence, is rarely fatal. As a rule, strangers on entering this part of the country suffer from dysentery, and, until heart and lungs have adapted themselves to the rarefied air, experience the discomforts of *soroche*, the chief characteristics of which are headache and great difficulty in breathing. *Soroche* is the Spanish translation of the Aymara word *sorojche*, the name by which this ailment is known among the Aymara Indians. In other parts of South America it is called *puna*.

In this part of Bolivia, which embraces the cities of La Paz, Corocoro, Oruro, Potosi, and the great mining center of Huanchaca, Colquechaca, etc., there are four seasons—spring, covering the months of September, October, and November; summer, the months of December, January, and February; autumn, the months of March, April, and May; and winter, the months of June, July, and August. As the transition from one season to another, as thus classified, is not attended by any marked change of weather, a more popularly recognized division is that of the wet or summer season, from December to May, and the dry or winter season, from June to November. During the wet months of December, January, and February, which usually cover the rainy season, and the cold months of June, July, and August, this section of the country is subject to extremes of heat and cold. The difference between the indoor and outdoor temperature being so marked and fires being simply used for cooking, the only means of keeping comfortable is to remove one's overcoat or wraps on leaving the house and don them upon entering. During the other months of the year, the weather is, for the most part, mild, uniform, and exceedingly agreeable.

The wet season is marked by frequent and terrific hail and thunder storms, and so copious is the rainfall that frequently the inconsiderable mountain streams are suddenly converted into impassable rivers. At this season, the La Paz River, which enjoys the distinction of being the only tributary of the Amazon which receives its waters from the eastern declivity of the Cordillera Real, becomes a rushing mountain torrent, sending its waters southward through its narrow, tortuous channel around the base of the lofty Illimani, and thence northward into the calmer currents of the Mamore.

Sucre, in the valley of the Pilcomayo; Cochabamba, in the valley of the Tapacari; and Sorata, in the Sorata River valley, enjoy perpetual spring and a climate of unsurpassed salubrity.

Santa Cruz, Trinidad, and Yungas mark the regions of a continuous tropical summer, where the rains are more frequent and copious and where the earth yields her fruits in astonishing richness.

While the wet season of this part continues from November to April, rains, though less frequent and abundant, occur during the remaining months. By reason of the annual inundation of large areas of this region and the continuous hot climate and consequent noxious exhalations from the decaying vegetation, malarial fevers and other diseases common to warm climates are prevalent. This is more especially true of the extensive tropical provinces of the department of Beni, though, unlike the fevers of the malarial districts of Colombia and Brazil, they yield to simple treatment, while the epidemic maladies which occur here from time to time are not of a violent character.

Along the narrow valleys of the Mapiri and Tipuani rivers, where the purifying currents of fresh air are, in a measure, obstructed by abrupt and elevated mountain walls, a tertian fever prevails, called *terciana*, an intermittent, whose paroxysms occur about every forty-eight hours.

In the absence of proper medical treatment, a large percentage of the mortality occurring among the Indians of these and other low valleys of Bolivia result from this disease. Strangers entering these sections, and especially Mapiri and Tipuani, should be amply supplied with quinine, and carefully avoid freshly plucked fruits and alcoholic drinks.

The regions above 13,000 to 13,500 feet are, as a rule, too cold for habitation, and the vegetation is correspondingly scant, being limited to hardy grasses and mosses and stunted shrubs, with here and there small patches of barley, potatoes, and quinia.

The snow line of the Cordilleras varies from 15,000 to 18,000 feet, "modified in many cases by the aspect of the mountains and the nature of the country surrounding them." The main Cor-

dillera is crossed near the snow line, en route to Yungas, at an altitude of about 15,000 feet on the northwest side of Illimani, and en route to Sorata, Mapiri, and Tipuani at an altitude of about 17,000 feet on the northwest side of Illampu, while the snow line of the intervening chain, which forms a lofty serrated ridge, is approximately 15,000 feet.

La Paz, the metropolis and commercial center of the Republic, situated in the Quebrada del Choqueyapu, 650 feet below Lake Titicaca, and about 12,250 feet above the sea, in latitude 16° 29′ 54″ and longitude 68° 29′ 38″, has a mean annual temperature of about 50° F., as correctly stated by Dr. H. A. Weddell, a traveling naturalist of the Museum of Natural History of Paris in his "Travels in the North of Bolivia," published in Paris in 1853.

The following translation from the above work, taken from the Report of the Statistician of the Department of Agriculture (No. 89, New Series, 1891, p. 553), will be of interest in this connection:

The climate of La Paz is such as the Bolivians call *cabezeras de valle* (head of the valley). Its mean annual temperature is about 10° C. (50° F.), or somewhat less than that of Paris, generally reckoned at 10.8° C. (51.4° F.). The annual range of temperature at La Paz, however, is very different from that at Paris, being less hot in summer and less cold in winter. The result of a long series of observations made in this part of Bolivia, and commuicated to me show the extremes of temperature to be from −7° C. (+19.4° F.) to 23° C. (73.4° F.).

In 1850 the lowest temperature observed in June, there the coldest of the year, was only −4.44° C. (24° F.), while at Paris hardly a winter passes when the thermometer does not fall below −10° C. (14° F.). It might be concluded from these data that the temperature of La Paz is quite uniform, and such, indeed, would be the case did not the usual clearness of the sky render loss of heat by radiation very considerable, so that the nights are generally much colder than the day, while, in consequence, pulmonary diseases are quite prevalent there. Though the thermometer frequently falls below the freezing point at La Paz, plants are rarely frozen. This is because at this great height the air is very dry. I was led to notice this by the fact that the Indians, when preparing chuño, are obliged to wet their potatoes in order to make them freeze.

ALAMEDA OF LA PAZ.

Dr. Weddell is in error, however, in stating that pulmonary diseases are quite prevalent in La Paz, if among pulmonary diseases he includes consumption. As already stated, cases of pneumonia or inflammation of the lungs, consequent upon undue exposure to the night air, are of frequent occurrence, and are apt to be speedily fatal, while cases of consumption are rare. On the contrary, La Paz is the chief resort for pulmonary patients from the south Pacific coast, but, on account of its great attitude, is not a desirable point, if the disease has reached an advanced stage, or if there is any coëxistent organic heart trouble or nervous affection.

The only other record of temperature for any part of Bolivia, kept for a continuous period, is that for the city of Oruro, situated in latitude 18° 62′ and longitude 67° 12′, and, according to the map just issued by the Antofagasta and Oruro Railway Company, at an elevation of 3,694.49 meters (12,122 feet), but according to all previously published measurements, about 13,000 feet above the sea.

This record, which was kept by Señor Carlos Petot, vice-consul of France resident in that city, is as follows:

Summary of temperature observed at Oruro, Bolivia, by Señor Carlos Petot during the years 1885–'88.

[Centigrade thermometer.]

Months.	Maximum.	Minimum.	Average.
January	18	3	10½
February	18	2	10
March	16	2	9
April	13	—1	6

Chapter VIII.

PRODUCTS AND REGIONS OF PRODUCTION.

The natural wealth of Bolivia is far greater than is generally supposed. The country is not only rich in gold and silver, but has an abundance of copper and tin of a superior quality. Rich deposits of bismuth, mercury, platinum, lead, iron, zinc, nickel, alum, sulphur, and some coal are met with, although thus far no important coal deposits have been discovered. Precious stones, chiefly emeralds, and opals, also lapis lazuli, which is a species of mineral of a fine azure blue, valued for ornamental work, hyacinth, agate, alabaster, jasper, marble, granite, slate, pumice stone, porphyry, basalt, chalk, borax, common salt, magnesia, etc., are also found. In the maritime province of Atacama, which has been in the possession of Chile since the war of 1879–1882, are vast deposits of nitrate of soda and guano. The animal kingdom is unusually varied and interesting, while the vegetable kingdom is extremely rich and abundant.

Commenting upon the vast and unavailed of wealth of the country, as he observed it in 1869, George Earl Church, in his report heretofore referred to, says:

I found millions of sheep, llamas, and alpacas browsing upon the mountain sides, and not a cargo of wool was exported; vast herds of cattle roamed the plains, and yet an oxhide was worth scarcely more than a pound of leather in the European markets; hundreds of tons of the richest coffee in the world were rotting on the bushes, and only about ten tons per annum were sent abroad as a rare delicacy; abundant crops of sugar in the river districts were considered a misfortune by the planter, because there was no market; the valleys of Cocha-

bamba were rich in cereal wealth, unsalable when the crop was too great for home consumption; not a valley or mountain side but gave agricultural, medicinal, and other products, such as commanded ready sale in any foreign market; sixty-five kinds of rare and beautiful cabinet woods stood untouched by man in the great virgin forests of the north and east. The mountains were weighted down with silver, copper, tin, and other metals, and the people gazing upon a wealth sufficient to pay the national debts of the world, and yet unavailable for lack of means of communication. There was abundant evidence that not a river that carried its waters from Bolivia to the Amazon but washed through auriferous deposits as rich as any in California or Australia, and for lack of power to take machinery to them they did not produce to exceed £60,000 per annum, where they should have produced millions.

While the facilities for transportation have considerably improved since the above was written, the vast natural wealth of Bolivia, embracing as it does the choicest products of all latitudes, is still largely unavailable, because, under existing conditions, her products, other than high-grade minerals and coca, can not be profitably exported.

The range of production in Bolivia extends from the purely tropical region to that of perpetual snow and ice.

The learned Dr. Agustin Aspiazu, of La Paz, in his "La Meseta de los Andes," divides the country into four zones of production, namely, the torrid, temperate, frigid, and glacial, each having its own flora and fauna. In the article descriptive of the resources of Bolivia, heretofore referred to as appearing in the Report of the Statistician of the Department of Agriculture (No. 89, New Series, 1891), the zones of plant production are correctly described as extending from "the purely tropical of the lowlands through the subtropical of the lower valleys, the temperature of the valley heads and lower plateaus, and the subarctic of the punas to the arctic of the punas bravas and the regions of perpetual snow and ice," and are therefore marked by climates of elevation rather than extent.

The climatic scale suggested by Dr. Agustin Aspiazu* furnishes perhaps as convenient a basis for the classification of the total

* See cut, p. 20.

resources of the country, with respect to their zones of production, as can be adopted.

TORRID ZONE.

This region extends from the low tropical plains and valleys of eastern Bolivia to an altitude of approximately 6,500 feet above the sea. It abounds in every variety of tropical fruits, including granadillas, pepinos, paltas, pacaes, a fruit of the genus *Inga*, consisting of thick pods about six inches long filled with a sweet, refreshing, white pulp; chirimoyas, a species of *anona*, one of the most highly prized of the Bolivian fruits; pineapples, those of the province of Yungas being especially rich and fragrant; sugar cane, coffee, rice, a superior quality of white and yellow cotton, coca (erythroxylon coca), the dried leaves of which are a highly stimulating narcotic and are chewed by the Bolivian and Peruvian Indians, by travelers in the Upper Andes, and by the Bolivian soldiers, when in the field, just as betel is used by the inhabitants of the East Indies; cacao or chocolate tree, a species of *theobroma*, found also in the West Indies, which bears a pulpy fruit from the seeds of which chocolate is made. One of the peculiar productions of this zone is the guayacu tree from which is gathered a fruit containing a rich aromatic flour or powder neatly inclosed in a strong box-shaped cover or shell and esteemed more for its rich perfume than for food. It is known only by the name given it by the Aymara Indians, viz, *háku-guayácca*, *háku* in the Aymara tongue, meaning flour and *guayácca*, box; hence "flour box" or "box of flour." The guayacca is perhaps the tallest tree of Bolivia, growing to a height of about 125 feet, with dense foliage and wide-spreading branches, thus making it one of the most delightful shade trees known to the montaña. This region also abounds in forests of ebony, mahogany, rosewood, satin wood, cedar, wax, and cork trees, palms, rubber trees (caoutchouc), and other varieties of wood of great beauty and value rarely met with in other

countries, including a species of mulberry from the bark of which are made the curious shirts worn by certain tribes of the Bolivian Indians. Among the medicinal and other plants are cinchona, jalap, matico, sarsaparilla, copaiba, tamarind, palma-Christi, ipecacuanha, camphor, gum arabic, balsams, valerian, cinnamon, and vanilla.

The animal kingdom is here represented by vast herds of cattle and by many wild species, including the leopard, black bear, jaguar, or American tiger, puma, tapir, sloth, armadillo, wild cats, monkeys, the huge boa constrictor, alligators, etc. Among the many interesting varieties of birds, are humming birds of rich and varied plumage; the uchi, a species of yellow and black spotted canary; toucan, tunqui, of bright red plumage and stately crest, resembling that of the African touraco; a great variety of parrots and paroquets; the colibri, a small handsome bird allied to the humming bird; the pajaro mosca (fly bird), with plumage so rich and changeable that, it is said, in the sunlight "it produces with its feathers the same changes and brilliancy of the diamond;" the organito (small organ), noted for the organ-like music it makes as it hums and sings, here and there, along the waterfalls where it is always heard. The low plains of this region of production, though the most fertile section of Bolivia, have their objectionable features in the excessive humidity of the climate, and in the obstinate resistance of certain of the native tribes to occupation by strangers either from within or without the Republic.

TEMPERATE ZONE.

This zone of production lies approximately between 6,500 and 12,000 feet above the sea, and embraces the central departments of Cochabamba, Chuquisaca, and Tarija, and the rich valleys of the western departments of the Republic.

Aside from the vast deposits of gold, silver, copper, tin, and other metals which, for the most part, are here first met with, the

chief products are lemons, paltas, grapes, figs, peaches, apples, plums, cherries, quinces, potatoes, and all kinds of garden vegetables; rice, barley, wheat, and maize are also extensively cultivated.

The department of Cochabamba is the great wheat and maize growing section of the country, and is therefore properly denominated the "Granary of Bolivia." It is also noted for its fine horses bred from imported stock from Peru and Chile, while in Sucre are found the finest imported coach and saddle horses in the Republic. Cattle and horses are also numerous throughout this entire range. The forests of Chuquisaca and Tarija, which extend down to the wooded plains of the Gran Chaco Boreal, and those of the La Paz provinces of Inquisivi and Yungas, adjoining the department of Cochabamba on the west, are the homes of a great variety, in size and plumage, of humming birds, pigeons, quails, pheasants, parrots, paroquets, and of innumerable butterflies of indescribable beauty. Monkeys, wild cats, skunks, rabbits, vizcachas (Peruvian hare), foxes, and deer are also numerous.

FRIGID ZONE.

This range embraces that portion of the country situated between 12,000 and 16,000 to 16,500 feet above the sea. Its most important division is the great western plateau, or the Titicaca basin as it is more generally called, lying within the rich mineral department of La Paz, Oruro, and Potosi. As the cold winds blowing from the snowy summits of the Andes sweep in unbroken currents across this treeless plain at an altitude of from 12,000 to 13,000 feet, the climate is dry and generally cold, while that of the heads of the valleys (cabecera de valle) is considerably milder and the soil much more productive. Here, the natives, who, for the most part, are industrious, are alternately sowing and reaping throughout the year.

Although the lofty table-lands of this region are, to the casual observer, apparently nearly destitute of vegetation, they none the

less constitute the great sheep-grazing districts of the Republic. Here may be seen the Aymara Indians attending, with silent and assiduous care, their numerous flocks, and, with stones cast from their slings with marvelous precision, guarding them from danger or directing their course as they feed upon the short dry grass of the pampa.

While there is no official census of the domestic and useful animals in the country, the number of sheep pastured on this elevated table-land have been estimated at 7,000,000 or 8,000,000.

Along the borders of Lake Titicaca and in the mountains, are extensive herds of cattle, while in every part of this range of production, are numerous Indian ponies, mules, burros, and llamas, and a very poor grade of hogs. The Indians of western Bolivia are not only a pastoral people, but they are the farmers of Bolivia as well.

Here, their principal crops are potatoes, barley, quinua, cañaqua, and oca. Being masters of the art of irrigation, and understanding equally well the advantages of properly preparing the soil and drilling the seed in order to obtain the best possible results from this system of farming, they secure a yield of field crops upon these inhospitable uplands that would seem incredible to the farmers of our own country.

As a rule, however, it is too cold at this elevation to grow wheat or to mature barley, and therefore the latter, which is grown in great abundance, is fed to stock, both in its green and dry state, as fodder, and is sold in the La Paz and other markets in the same way. As stated by Prof. Alexander Agassiz in his hydrographic sketch of Lake Titicaca, the myriophilum (totora) here grows very luxuriantly, and forms an important article of food for the cattle of the lake shore, where they may be seen half way under water as they feed upon this nutritious and highly useful product of Lake Titicaca. The same authority says:

> The fields of totora are also the feeding places of the myriads of aquatic birds which abound along the lake shore, and which are the most characteristic feature of the fauna of the lake.

The fishes and reptiles are not numerous, and our collection of the former showed a poverty in species which is most remarkable, and this is also accompanied by a comparative poverty in the number of specimens, except in certain localities. There are in all only six species of fishes, Cyprinoids and Siluroids, a remarkably small number for a sheet of water as large as Lake Erie.

In the absence of trees, the totora, which grows spontaneously and in great abundance in the shallow waters of the lake, is applied by the Indians to perhaps as many uses as the bamboo in India. With this they cover their houses, construct their balsas and sails, make beautiful baskets, table and floor mats, matting as beds for the poor, carpets for the better classes, and strips of woven totora for all classes on which to rest when traveling through the mountains.

GLACIAL ZONE.

This zone embraces the loftiest mountains of Bolivia. It begins at an altitude of from 16,000 to 16,500 feet, and terminates in the regions of eternal ice and snow, extending southward from the immense glacier fields of the majestic Illampu, or Mount Sorato, to the towering heights of the beautiful Illimani 40 miles to the south of La Paz.

In the upper ranges of these inhospitable mountains, feed the wild vicuña and guanaco, fleet of foot and rich in fur, and in the lower ranges, the alpaca and llama. Along the mountain passes and in the lower levels, grow stunted shrubs and short white grass upon which the muleteers and llama drivers feed their animals when crossing the Andes, Rich deposits of silver, tin, bismuth. and considerable gold are also met with in this zone of production, while its crowning heights are not only perpetually covered with snow, but abound in solid beds and columns of ice from whence the markets of the country are supplied throughout the year.

Chapter IX.

GOLD MINES OF BOLIVIA.

As no detailed statement of the production of the precious metals in Bolivia has ever been prepared, so far as can be ascertained, but little is known outside of the country as to its mineral wealth other than that it is the third silver-producing country of the world and is presumably rich in gold deposits.

The absence of a properly organized Government bureau of statistics, furnishing convenient and reliable data upon this and kindred subjects, has made every attempt at such report a difficult and discouraging task. This is especially true as to the production of gold. No matter how desirable a tabulated statement of the gold production of Bolivia might be, the absence of reliable data upon the subject renders such statements* for any considerable period practically impossible. This report will, therefore, be confined to a mere statement of the estimated annual production of gold and how determined, and will then pass to the consideration of the history and condition of gold-mining in Bolivia.

ESTIMATED GOLD PRODUCTION IN 1890.

Gold, unlike silver, is not subject to export duty, and therefore there are no satisfactory means of ascertaining the annual production of the mines. Assuming, however, that one-fourth of the total production passes through the custom-house of this city (La Paz) in connection with the dutiable articles, as merchandise ship-

* Except as to the weight and coining value of the gold product for the years 1886–1890.

silver, a mineral not rare in their Empire, and being deficient in the knowledge of extracting this metal from the quartz, their most advanced method of smelting consisting of small cone-shaped furnaces built at elevated points where they might be fanned by the mountain breezes, they were only able to skim the surface of the vast gold deposits of the country. And yet, with their primitive appliances and methods, they had no trouble in securing this precious metal in such great abundance that history furnishes no parallel of such treasures of gold as were found in the royal palaces, temples, and public edifices of the Incas at the time of the Spanish conquest.

The sudden destruction of their Empire by the Spaniards in 1532, the sacking of their cities and temples, the assassination of their Emperor, Atahualpa, and the hardships to which they were subjected by their conquerors in their insatiable greed for gold, led the Incas to attach a new importance to the precious metals and to conceal their rich treasures with all possible haste. The undisputed fact of history is that the amount of gold and silver thus buried in caves and forests far exceeded in quantity that which was taken by the despoilers of their Empire.

That which the Inca gave the Spaniards, said some of the Indian nobles to Benalcazar, the conqueror of Quito, was but as a kernel of corn compared with the heap before them. (Oviedo, Historia las Indias.)

Disheartened by the fierce intimidations to which they were subjected, and no longer permitted to gather gold for the decoration of their temples and royal palaces, the Incas practically abandoned all forms of gold and silver mining until the close of the seventeenth century, a period of more than one hundred and fifty years. About this time, Sorata, the present capital of Larecaja, was founded, and soon became the most opulent city of Upper Peru, now Bolivia. Quickly following this event, an expedition of Spaniards, mainly from Chile, and a few Portuguese adventurers who had ascended the Amazon from Brazil, visited the prov-

ince of Larecaja and discovered the famous gold deposits of the Tipuani River, on the eastern slope of the Andes, from whose sands the Incas had washed millions of gold before the coming of the Spaniards. This marked the beginning of the first organized gold-mining venture ever undertaken in Bolivia. That this was the El Dorado of the Incas is well supported by a single extract from these ancient records. Señor Tomás Rada, writing of their discoveries to his friend, Señor Antonio Guillen, an expert miner of Chile, said:

> We have found abundant gold in these kingdoms on the other side beyond the snows, where foot traveling is difficult. If you should wish to come here, you will get gold to your heart's content.

Mining operations in northwestern Bolivia now rapidly multiplied, and, through the richness of the mines and unpaid labor of the Indian miners, vast fortunes were rapidly accumulated. It was at this period that the "rescate de oro," or annual sale of gold, was established and became the one great feature of the annual fairs or feasts held at Chuchulaya, Chiquitos, Tacacoma, and Yani, in the province of Larecaja. So much gold was offered on these occasions that it was sold at 15 pesos, or 9 bolivianos, per ounce.

This annual sale of gold, a sort of Wall-street exchange, is still carried on in these ancient Indian villages and attracts to them once a year the gold dealers of the country. It was my good fortune to be present at one of these great feasts, held at Chuchulaya last year, where I witnessed this "rescate de oro," established in that very pueblo more than two centuries before. It was interesting to observe that two hundred years of history had served to acquaint the 3,000 Indians present with something of the commercial value of this metal, as they had advanced the price from 9 bolivianos per ounce to 28 bolivianos, and yet they were selling it at 3 bolivianos less than the market price in this city, 110 miles distant.

In 1781, the Indians, smarting under the oppressive rule of the Spaniards, rose in revolt from Cuzco, Peru, to Tucuman, in the

Argentine Republic; destroyed Sorata, killed the Spanish proprietors and miners, and practically put an end to the business that made them slaves.

It was not until 1805 that work was again undertaken in this district. Señor Yriondo, a Spaniard, then led a new expedition into this field and began work at a point called Ancota. Despite the primitive methods employed, Ancota steadily yielded for the next sixty years a net annual profit of from 40 to 60 per cent on the invested capital. One of the best known and most successful miners who ever entered this district, however, was Señor Yldefonso Villamil, of La Paz, whose proprietorship in Tipuani continued from 1818 until his death in 1867, but whose actual mining operations, in which was associated with him his friend Señor Zabala, were confined to fourteen years of that time and constitute the closing chapter in the history of organized gold-mining in the province of Larecaja. While he secured large quantities of gold, the current stories of his success are the purest fiction. One of these commonly accepted stories represents that he secured 36 arrobas, or 900 pounds, of gold in a single year. For the true history of Señor Villamil's mining operations in Tipuani I am indebted to his venerable son, Gen. Pedro Villamil, of La Paz. Señor Villamil first worked that portion of the gravel banks of Tipuani known as "Salomon." In the absence of pumps and windlasses he substituted a bucket brigade of Indians, who, equipped with rude cowskin buckets and distributed in two divisions along the notched poles that served as ladders, quickly passed the water and gravel from hand to hand to the top of the shafts, a work so fatiguing that a fresh gang was required every few hours. As fast as the bowlders were displaced by digging, drilling, or blasting, a third division, equipped with rawhide ropes, dragged them up the wooden skids that rested against the sloping walls of these shallow shafts. So steep was the incline of these sloping shafts, or, more properly speaking, "sumps," that it often required

from 30 to 40 Indians to drag a single stone to the top. Señor Villamil's celebrated Indian bucket brigade being unable to longer drain the mines of the increasing flow of water that filtered through the sands from the Tipuani River, he was obliged to abandon the property in 1822. He retired, however, with $140,000 as the net earnings of his four years' work.

Thus stood the record of gold-mining in Bolivia up to the date of her national independence, in 1825, with the exception of the work of the early Spaniards in the quartz mines of Araca, 12 leagues south of La Paz, and of the Jesuits in the gold washings and quartz veins of Choquecamata, in the province of Cochabamba, of which, however, there is no obtainable data of value. While Choquecamata is said to have yielded, down to 1847, some $40,000,000, it was soon after abandoned, and no further attempt at reviving the gold-mining industry was made until 1851, when Señor Villamil again entered Tipuani and began operations at "Gritado," immediately opposite the old washings of "Salomon." Employing Chinese pumps worked by overshot wheels, cranes, derricks, and other improved appliances, he met with uninterrupted success until 1861, when his advanced years and impaired health forced him to abandon "Gritado" and retire from business.

While the fabulous stories afloat in relation to the results obtained during this period have given to Tipuani a world-wide fame, it may be well to add that, although the amount of gold secured by Señor Villamil during these ten years is generally placed at 5,000 pounds, the fact is that the yield was but 1,500 pounds, an amount equal, however, to an annual net profit of 40 per cent on the capital invested.

This closes the history of gold-mining in northwestern Bolivia. For thirty years, these rich gold fields have been given up to the Indians, who only work them when forced to it by their limited demands for ready cash. And this is practically true of every

part of the Republic save Chayanta, in southwestern Bolivia, where a company is working on a small scale.*

LOCATION OF THE BOLIVIAN GOLD BELTS.

The gold-bearing regions of Bolivia are divided into two great belts, well defined and unique in their formation. The one best known has its origin in northwestern Bolivia, in the province of Muñecas, and extends southeast through the provinces of Larecaja, Yungas, Inquisivi, the department of Cochabamba, and thence enters Santa Cruz, the extreme eastern department of the Republic. The other has its origin in southwestern Bolivia, in the province of Lipez, and extends almost due east until it passes slightly to the south of Tupisa and Cinti, and thence bears steadily northeast until it joins the northern belt in Santa Cruz; and thence, united, they enter Brazil and constitute one of the richest districts of that Republic.

Within the vast triangle described by these converging lines lies the great silver belt of Bolivia, running parallel with the Cordillera Real, north-northeast and south-southeast.

The extreme north of Bolivia, east of the Cordillera Real, or main Andean range, is also reputed to be rich in gold; but, as this section of the country is occupied by the Chunchos, a brave and treacherous tribe who admit no white man among them and whose almost impenetrable forests make it a comparatively easy matter for them to hold the country against every effort of the whites to enter, nothing definite is known as to its mineral wealth.

The principal gold-bearing districts of Bolivia are, by common consent, those belonging to the northern belt. The reports of competent engineers, recently sent from London to examine this section of Bolivia, show that the vast alluvial deposits of Suchez and Yani, on the eastern slope of the Cordillera Real, are even

* Two European companies, however, will shortly commence work in Tipuani, and a third is now being organized in La Paz for the same purpose.

richer than Tipuani and offer flattering inducements for hydraulic mining. The former is estimated at 100,000,000 cubic yards of gravel, yielding 37½ cents per cubic yard, and the latter at 20,000,000 cubic yards, yielding 50 cents per cubic yard.

Along many of the rivers flowing eastward in this section, deep placers of great richness exist. The La Paz River, flowing through La Paz from the western slope of the Cordillera Real and called in the native Aymara language "Chuquiapa," meaning "river of gold," also carries considerable gold, and in the days of the early Spaniards, was worked with great profit.

The present washings of Chuquiaguillo, an affluent of the La Paz River and only a league distant from La Paz, are also worthy of mention. It was here that an Indian in the seventeenth century picked up a mass of native gold that sold for $11,269, and which may now be seen in the Museum of Natural History in Madrid, and a few years ago, another nugget worth $5,000 now in the possession of Señor Juan G. Matta, the Chilian minister, residing in La Paz was found.

GENERAL REMARKS.

There are other gold-bearing districts capable of yielding enormous quantities of this precious metal under proper conditions, as, for instance, the Rio Suipacha, in southern Bolivia; but, like the districts already named, they are practically unproductive for the want of strong and well-directed capital, suitable machinery, and skilled labor. It is proper to observe, however, that, while Bolivia is thus rich in gold and is far richer in silver, it is well understood by those acquainted with the country and its environments that, situated as it is 500 miles from the Pacific coast, the cost of transporting the machinery and other materials necessary to successful mining in this country is so great that these rich deposits only offer inducements to strong capital and the best possible management. All the silver mines of Bolivia now worked under these conditions,

are paying handsomely, while all others are unprofitable; and so must it prove in every organized effort for the development of gold-mining in this Republic.

While it is apparent from what has here been stated that, under present conditions, the annual production of gold in Bolivia is small, it is equally apparent that, under proper conditions, it is capable of expansion. If the old system of mining employed by the Incas and early Spaniards yielded the rich tributes of gold to the Spanish crown described by Prescott and others, certain it is that, with proper transportation facilities and the introduction of our modern system of mining, backed by sufficient capital and the requisite mining and business intelligence, Bolivia will become one of the greatest gold-mining centers of the world.

The vast mineral regions and ancient river channels of the Bolivian cordilleras and the auriferous gravel beds of the great Andean plateau but await the vitalizing touch of the agencies described to make them yield up their enormous treasures of gold and vastly increase the world's annual production of this precious metal.

Chapter X.

THE SILVER MINES OF BOLIVIA.

In the statement of the gold production and history of gold-mining in Bolivia, attention was called to the difficulties attending the preparation of tabulated statistics showing the annual production of the precious metals in that country, owing to the absence of a properly organized bureau of statistics interested in carefully gathering and regularly publishing, under the authority of the Government, all obtainable data relating to this important subject.

With the exception of the export duties paid by the Huanchaca Company and a few others directly to the Government, the right to collect this duty of 80 cents (Bolivian money) per marc is sold to the highest bidder in October of each year for the calendar year beginning with the 1st of January next thereafter.

The successful bidder, having paid or secured to the Government the amount so agreed to be paid, is under no further obligation thereto in that behalf. During 1890, the duties on silver exported from five districts were sold and collected in this manner, while ten different mining companies paid directly to the Government. The amount of silver produced by these ten mines in 1890 can therefore be pretty accurately determined, while the amount produced from the mines falling within the districts named is not so easy of ascertainment. The estimates, therefore, of the product of these last-named mines and of the amount of silver used in the arts and clandestinely exported, as embodied in this report, though based upon the most trustworthy data obtainable,

including the reports of the minister of the treasury, are necessarily unsatisfactory, and out of abundant caution, have been placed at fully 10 per cent less than the popularly accepted estimates.

With this explanation of the difficulties attending the effort to secure reliable data upon this subject, the amount of silver produced by the Bolivian mines for the calendar year 1890 and the first six months of 1891 may be stated approximately as follows:

Table showing the production of silver in Bolivia during the calendar year 1890 and the first six months of 1891.

Name of mines and districts.	Where situated.	Production.	
		1890.	First six months, 1891.
		Marcs.	*Marcs.*

Chayanta	Department of Chuquisaca	43, 875. 00	
The North	Department of La Paz	52, 625. 00	
Total		1, 190, 158. 22	736. 472. 48

The report of the minister of the treasury for the first half of the calendar year 1890 places the production for that period at 595,079.11 marcs, while the production for the first six months of 1891, as here given, was 736,472.48 marcs, making a gain for the same period over last year (1890) of 141,393.37 marcs.

No allowance is made in the above table for silver used in the industrial arts and clandestinely exported, which is usually estimated here at one-fifth of the total annual production. It is per-

fectly safe, however, to add one-tenth to the production, as shown by the table, for this purpose, thereby increasing the total production for the calendar year 1890 to 1,309,174.04 marcs and for the first six months of 1891 to 810,119.72 marcs.

The following statement shows the quantity and grade of ore produced and how disposed of for the calendar year 1890:

	Marcs.
Ores containing 50 marcs per cajon, or one-half of 1 per cent of silver produced	49, 586. 02
Ores containing 100 marcs per cajon, or 1 per cent of silver produced	252, 813. 76
Ores containing 150 marcs per cajon, or 1½ per cent of siver produced	84, 988. 52
Ores containing 200 marcs per cajon, or 2 per cent of silver produced	74, 998. 24
Ores containing 250 marcs per cajon, or 2½ per cent of silver produced	7, 054. 6
Ores containing 300 marcs per cajon, or 3 per cent of silver produced	1, 216. 64
Ores containing 350 marcs per cajon, or 3½ per cent of silver produced	2, 223. 9
Ores containing 400 marcs and over per cajon, or 4 per cent of silver produced	165, 110. 12
Total of above grades exported	637, 901. 8
Amount of plata piña produced in the country from low-grade ores	552, 166. 42
Total exported and worked in the country	1, 190, 158. 22
Estimated amount used in the industrial arts and clandestinely exported, viz, one-tenth of the total product reported	119, 015. 82
Total production for the year	1, 309, 174. 04

Estimating 1 kilogram at 4.3478 Bolivian marcs and the commercial value of silver at the average price for the calendar year 1890, as given in the annual report of the director of the United States mint, the commercial value of the silver produced in Bolivia for the calendar year 1890 was as follows:

Table showing commercial value of the produce of Bolivian mines for 1890.

Description.	Quantity.		Value.*
	Marcs.	*Kilograms.*	*Dollars.*
Total reported production	1, 190, 158. 22	273, 738. 03	10, 018, 810
Total estimated amount used in the industrial arts and clandestinely exported	119, 015. 82	27, 373. 8	1, 001, 881
Total	1, 309, 174. 04	301, 111. 83	11, 020, 691

*United States currency.

This shows an apparent increase of production over 1888 and 1889 of $1,442,691; but, as the reported production for those years, viz, $9,578,000, does not embrace silver used in the industrial arts of the country and clandestinely exported, which is fully the same ratio of the total production for those years as has been included in the estimate for 1890, viz, one-tenth, the real increase must be determined by adding one-tenth to the returns of the Minister of the Treasury for those years and substracting this sum from the total product of 1890, which shows an actual gain in production for 1890 over the two preceding years of $485,691.

It is interesting to note in passing that, as the average commercial value of silver (.985 fine) in the country for 1890 was but 10.40 bolivianos per marc, or 45.21 bolivianos per kilogram, and the value of a Bolivian dollar at the average exchange for the year (30*d.*) was but 63 cents in United States currency, the difference between the commercial value of the total silver product of Bolivia for 1890 in this country and New York was over $2,600,000, a handsome margin even after paying the export duty of 80 cents per marc and the expense of shipment to the United States.

† The books belonging to this year do not exist in the mint.

METHOD OF TREATING SILVER ORES.

The method of treating silver ores is practically the same in all the mining centers of the country. The ore is first passed through a crusher and then separated by hand, Indian women being employed for this purpose, for which they are paid from 35 to 55 cents in Bolivian money per day, equal to from 20 to 35 cents in United States currency. Ores having 50 and more marcs per cajon, or, say, 165 ounces troy per ton and above, are placed in 100-pound sacks and shipped to Europe, while the lower-grade metals, down to 20 marcs per cajon, or yielding, say, 65 ounces of silver per ton, are treated at the mines, while all ores carrying less than 65 ounces are generally rejected as worthless. The first process here employed consists in milling the ore.

Milling the ore.—The mills used for this purpose are of three

kinds, each made of stone, and are of the most primitive character. In order that the primitive methods of milling usually employed in the country may be the better understood by those not having seen them in operation either in South America or in Mexico, a brief description may be of interest.

First is the "quimbalete," which is simply a large bowlder, with a short pole lashed to the top with rawhide to serve as a lever in rocking it with a "pump-handle motion" back and forth through the segment of a circle of about 5 feet in diameter over a flat bed stone, upon which the metal is thrown so as to be caught under the rocking bowlder.

This "mill," which is generally used where water is scarce, is operated by a single Indian, or, if it be a "double-handed quimbalete," that is, if the pole is lashed midway across the top of the bowlder, then two Indians are required, who, sitting astride either end of the pole, convert the old game of seesaw into an important industrial exercise.

The second is the "trapiche," and is the primitive form of the present Chilean mill. It consists of a large stone wheel 6 feet in diameter and 5 feet wide, called "voladora," whose axle is connected with a perpendicular shaft on which rests horizontally a large wooden wheel, similar to a Pelton, which, being propelled by water, drives the "voladora" around on a flat, circular bed stone called "solera," upon which the metal to be thus milled is thrown from time to time.

In milling gold ores, the water serves the double purpose of driving the mill and washing the metals. Rushing down a sluice box called "chiflon," at an angle of 45°, and striking the buckets, which consist simply of upright pieces of boards extending across the top of the wheel from its rim toward its center, it falls upon the ore traversed by the "voladora," carrying off the fine particles into a pebble-paved sluice box about 6 feet long, where the metal and quicksilver are finally deposited. The capacity of a new

mill of this kind is about 2 tons per day of twenty-four hours, but, as it wears rapidly, its capacity is proportionately lessened, until at the end of twelve or eighteen months a new "voladora" is required.

The third is the "arrastra," and consists simply in substituting a large bowlder for the stone wheel of the "trapiche," which, being lashed to the end of the axle, is dragged over the metals, thus milling them by friction.

Thousands of these "arrastras," "volantes," and "valadoras" are scattered about the abandoned works of Araca, the silent witnesses to the vast mining operations of the early Spaniards at that point.

Plata piña.—The ore having been thus milled, is next subjected to the ordinary process of amalgamation and washing, and the metal is then taken up by quicksilver and placed in cast-iron patterns and pressed, thereby giving it form and expelling a large percentage of the quicksilver, when it is removed from the press and placed in a retort, where the remaining quicksilver is expelled, leaving as the finished product a porous mass of pure silver in the shape of a pineapple; hence its Spanish name "plata piña," or silver pineapple.

This is the class of silver used for coining and in the industrial arts, while large quantities are clandestinely taken out of the country, thus escaping the payment of the export duty of 80 cents per marc.

This process was first introduced by the early Spaniards, and was a great advance over the smelting process they found in use among the ancient Indian miners, which consisted simply of small cone-shaped furnaces, called in the Aymara language "guayra," meaning blasts, built upon the tops of the hills and mountains, where the strong winds rushing through the air funnels in the sides of the furnace fanned the charcoal fires within until the metal was separated from extraneous substances.

LOCATION OF THE SILVER DEPOSITS OF BOLIVIA.

Beginning at Tupixa, the capital of the province of Chichas, in the extreme south of the Republic, and running directly northwest through Huanchaca, Potosi, Oruro, Sicasica, and La Paz, on up through the shore provinces of Lake Titicaca, and terminating in the Sotolaya district of the Department of La Paz, are the great silver and tin mountains of Bolivia, covering a vast territory of about 300 leagues long and 70 leagues wide, over the whole of which are scattered the old workings of the Spaniards.

ABANDONED MINES.

At intervals of every 15 or 20 miles within this great silver belt, are to be seen the old abandoned mines of the Spaniards, the traces of whose vast operations represent results achieved through the enforced and unpaid labor of the Indians that, in the light of our modern methods of mining and just consideration for labor, seem incredible.

One can not travel through the zigzag tunnels and down the tortuous declivities of these old Spanish mines, which always followed the lode in utter disregard of the proper and permanent development of the mines, without being impressed with the thought that these cruel old taskmasters, like guilty men, hastened to secure their ill-gotten gains with all possible speed, as though conscious that their savage brutality in forcing the poor Indian to toil in the mines unpaid and practically unfed must bear its just fruits, as it ultimately did, in their final expulsion from the land of their oppressions at the hands of those they had so sorely oppressed.

Señor José Maria Dalence, in his rare and interesting "Bosquejo Estadistico de Bolivia," published in Chuquisaca in 1851, after a careful personal investigation of the subject by departments, provinces, and mining districts, gives the number of mines abandoned and the number in operation in Bolivia in 1848, as follows:

Table showing the number of silver mines abandoned and in operation in Bolivia in 1848.

District.	Number of mines abandoned.	Number of mines in operation.
Potosi	1,800	26
Porco	1,519	33
Chayanta	130	8
Chichas	650	22
Lipez	760	2
Oruro	1,215	11
Poopo	316	15
Carangas	285	4
Sicasica	320	9
Inquisivi, Department of La Paz	160	5
Ayopaya, Beni, Santa Cruz, and other sections not enumerated	2,845	.....
Total	10,000	134

As indicating the ratio of worked to abandoned gold mines at the same period (1848), the following figures will suffice:

District.	Worked.	Abandoned.
Oruro	.....	200
Araca	4	500
Sorata	7	500
Argue	2	100
Total	13	1,300

These figures, which may be taken as approximately correct, are the more interesting and instructive because the intervening forty-four years have not served to materially change them. The general condition of gold mining has remained unchanged since 1848, while the number of silver mines actually worked has but slightly increased; and yet the enlarged capital employed and the improved methods of mining and of treating silver ores introduced in certain districts in recent years, notably Potosi, Huanchaca, Colquechaca, and Oruro, have resulted in a steady increase of production, until the total silver produced by the Bolivian mines for

MINT, POTOSI.

the calendar year 1890 was $11,020,691, as against about 9,790,000 pesos in 1848 (the peso being 80 cents).

If united capital and improved methods of work, thus so sparingly employed in Bolivia since 1848, have wrought the increased production named without any appreciable addition to the number of mines worked, it is apparent that, with these same conditions applied to the ten thousand abandoned mines of the old Spaniards and to the greater unexplored riches of the vast silver belt of the Republic already described, supplemented by the necessary transportation facilities which railroads alone can supply to this country, the annual silver production of Bolivia would be second to that of no country in the world.

HISTORICAL OUTPUT OF BOLIVIAN MINES.

The causes leading to this remarkable decline in the number of mines worked in Bolivia since the period of greatest mining activity under the Spaniards must be looked for outside of the character of the mines themselves. The system of rifling the mines for immediate gain, instead of systematically developing them for greater and more enduring results, as practiced by the Spaniards; the treatment of the Indians and their consequent revolt and butchery of their oppressors and wanton destruction of the mines; the war between Spain and England; the famine of 1804; the protracted war of independence, ending in 1825 with the expulsion of the Spaniards and complete prostration of the mining industry; and the impoverished condition of the country that followed, would seem to furnish a sufficient combination of causes to account for the wholesale abandonment of the mines described; but the following figures seem to clearly demonstrate that the character of the mines of Bolivia does not enter into the account.

The records kept at Potosi, the location then, as now, of the public mint, of the fifths that accrued to the royal treasury from

1545 to December 31, 1800, show that the mines of Bolivia produced during that period 3,339,262,032 Spanish hard dollars. The same record shows that, of this sum, the mountain of Potosi alone produced, during the same period of two hundred and fifty years, the following:

Years.	One-fifth to Spanish Crown.	Total production.
	Bolivianos.	*Dollars.*
1545–1556	4, 873, 000	24, 365, 000
1556–1578	9, 802, 257	49, 011, 285
1579–1736	129, 509, 939	611, 256, 349
1736–1800	162, 804, 123	848, 315, 508
Total	306, 989, 319	1, 532, 948, 142
1800–1864 (estimated production.*)		1, 386, 951, 258
Total		2, 919, 899, 400

* As given by various local authorities.

The chief source of this vast production of the mines of Potosi, next in point of wealth to those of Guanajuato, in Mexico, was the superficial stratas of "pacos" ores, known as "Colorados" in Mexico, and also chlorides of silver, a class of surface ores common to Bolivia, Peru, and Mexico.

To this sum of $3,339,262,032, produced from 1545 to 1800, must be added the production from 1800 to 1825, the date of Bolivian iudependence, viz, $67,104,003, making a total of $3,406,366,035, which sum, barring the amount produced from the date of the conquest in 1532 to 1545, for which period no reliable statistics are available, represents the total production of the silver mines of Bolivia during the two hundred and ninety-three years of Spanish rule in Alto Peru, the ancient name of Bolivia.

Table showing the silver production of Bolivia from 1545 to 1846.

CONCLUSION.

Not only are the silver and gold deposits of Bolivia abundant and rich, but in no part of the world, with the possible exception of California, do they find a wider distribution than here; and yet present conditions are not favorable to their cheap exploitation. The time is not far distant, however, when all this will be changed, and from the Bolivian cordillera, will be secured an enormous increase of the world's annual production of the precious metals.

It is apparent to the most casual observer that the country is slowly but certainly awakening to the great possibilities of its mines, and that the investment of foreign capital in this field is steadily increasing, while vastly better facilities for mining the ores and extracting the metal are being supplied in certain of its mining centers.

Mr. Arthur F. Wendte, of New York, as constructing engineer of the Real Socavon de Potosi, an English company, recently completed the construction of a large amalgamation plant for that company, and is now building a 100-stamp mill and smelter at Antofagasta for the Huanchaca Company, while important improvements are projected in a few other districts.

The matters of first consideration, however, in the problem of

successful gold and silver mining in this country, are cheaper transportation and cheaper fuel. The Government, recognizing these as prime essentials, has recently granted liberal concessions for the construction of railways to the mountain districts and navigable rivers of eastern Bolivia and to its western frontier, with branch lines connecting many of the principal mining centers. With these lines once in operation, bringing cheap lumber and fuel from the great timber districts of the montaña and furnishing cheaper transportation between the mines and the coast, present conditions will vanish, and for the first time in the history of the country, the opportunity will be presented for the safe investment of the large capital essential to profitable mining; and, from being the third silver-producing country of the world, Bolivia will probably become the first.

Chapter XI.

COPPER AND TIN.

Copper and tin rank next to gold and silver among the mineral riches of the Republic. The tin mines of the department of Oruro and the copper mines of the department of La Paz are among the richest in the world. The enormous quantity and superior quality of these metals are alone sufficient to give to Bolivia high importance among the mineral-producing regions of America.

COPPER.

Although it is said that the famous mountain of Potosi produced from 1545 to 1864 silver to the amount of 600,000,000 pounds sterling, or $2,919,900,000 (United States money), the mountains adjacent to Corocoro, near the Desaguadero River, are as abundant in copper as Potosi was in silver at the time of its discovery in 1545, while, unlike Potosi, their wealth is yet to be extracted. The annual production is about 4,000 tons, of which about 3,000 tons are exported and 1,000 tons are consumed in the country.

There are three grades of ore: (1) Native copper, called charqui, containing from 80 to 98 per cent of the metal. The present production, amounting to about 1,000 tons per year, is used in working the silver ores of the country. (2) Oxide of copper containing about 40 per cent of the metal. As this grade must be reduced by smelting it is but little used, owing to the cost of fuel. (3) A copper-bearing sandstone yielding granulated copper known as barrilla. The metal is extracted by first smelting

the stone and then washing it from a 6 per cent average to from 80 to 98 per cent barrilla. At present, it is the only grade of Bolivian copper exported, and is shipped exclusively to France, where it is said to command a higher price than bar copper. So far as known, those of Corocoro are the only mines in the world yielding barrilla.

Hitherto, it has been necessary to transport copper by pack animals either to the Chilean port of Arica or to the lowest point of navigation on the Desaguadero, a distance of 35 miles, where it is loaded on the river steamers and carried to Desaguadero, and from thence by the lake steamers to Puno, Peru, from whence it is shipped by rail to the Peruvian port of Mollendo. The cost of transportation by these routes has thus far proved a serious drawback to the exportation of copper.

In view of the transportation facilities now being provided for this district, the amount of copper annually exported from Bolivia will be greatly increased within the next eighteen months. Even under present conditions, it is expected that the production for 1892 will be greatly in excess of any previous year. The Antofagasta Railway, now completed to Oruro, will shortly be extended to Corocoro and thence to La Paz, thus affording direct railway transportation to the coast. In addition to this, the Peruvian Corporation owning and operating the southern railway system of Peru and the Lake Titicaca and Desaguadero River steamers are preparing to place their line in direct connection with Corocoro and otherwise increase their facilities for competing with the Antofagasta Railway for the increasing traffic of this district. To this end, they sent out from Glasgow on the 1st of June of this year a fine steamer of 260 tons burden, which will soon be afloat on Lake Titicaca, and are now having a large dredge built in Europe and a smaller one at their railway shops in Arequipa, Peru, to be used in dredging the Desaguadero River, so as to extend navigation as far south as Concordia. From this point, a

tramway will be built direct to the Corocoro mines, with lateral lines extending to all the productive mines of this district.

Within the next year, this company will employ five steamers and one hundred barges in handling the lake and river traffic in connection with the Mollendo and Puno Railway. This company is also preparing to build furnaces and import the necessary coke from Europe to smelt the low-grade copper not now exported. With the increased transportation facilities thus being provided for handling Bolivian copper, its exportation is certain to become, in the near future, one of the largest and most profitable industries of the country.

The amount exported from Bolivia for the calendar years 1890 and 1891 inclusive, according to official returns, was as follows:

Amount of copper barrilla exported from Corocoro, department of La Paz, Bolivia, for the year 1890.

TIN.

The tin mines of Bolivia will share equally with the copper mines in the benefits of the improved transportation facilities described. The completion of the Antofagasta Railway has already resulted in increased activity throughout the great tin-mining district of Oruro, where the richest deposits of this metal, so far discovered, are located. The present output is from 5,000 to 6,000 tons per annum, which is certain to be largely increased in the near future. The importance of Bolivia as a tin-producing country is fully presented in the following article, written for this publication by Mr. John B. Minchen, of Oruro, a well-known English engineer, and a recognized authority upon this subject:

Tin ore is met with at frequent intervals along the eastern border of the Bolivian table-land from the neighborhood of Lake Titicaca to near the southern boundary of the Republic. The richest and most important portion of this zone is, however, undoubtedly comprised between latitude 17° and 19°. The general formation is slate or shale, usually highly inclined and distorted by eruptions of trachytic porphyry or other igneous rocks, the tin ore occurring in these latter. The conditions under which it is met with are, however, by no means uniform

either as regards the extent of the deposits or the class of associated minerals; occasionally, as in the silver mines of Oruro and Potosi, it is more or less intimately mixed with iron pyrites and ores of silver; in other, and the majority of cases, it is more or less pure, forming the chief characteristic of the lodes.

In some instances, the deposits are to a great extent superficial; in others, they have been followed to depths of 1,000 feet, and still continue. The width of the veins or lodes is also variable, ranging from 1 or 2 inches up to 6 or 8 feet. In the tin mines proper, the ore is frequently very pure, containing 40 per cent, 50 per cent, and even 65 per cent of the metal, though in such cases the width rarely exceeds 2 feet; in other cases, almost pure tin oxide occurs in the form of crystalline grains and nodules in a matrix of tenaceous clay or in a ferruginous mass, forming the bulk of the lode, which then often presents a width of from 6 to 10 feet.

In the mines worked exclusively for tin, depths of 600 feet have not, as yet, been exceeded. The ore in some of these continues rich in the bottom, while in others it gives place to pyrites carrying more or less tin.

The excessive freights to and from the Pacific coast have hitherto greatly retarded the development of the Bolivian tin mines, increasing the cost of ore exported, and rendering difficult the importation of suitable machinery, the down freights reaching £12 to £14 per ton, and the up freights £20 to £24.

Another evil hitherto has been the insignificant amount of capital in the country available for the industry, and the disinclination of foreigners to make any considerable investments in a region laboring under such disadvantageous conditions.

The miners have been, almost without exception, in the power of the merchants, who, to counterbalance the risks which they undoubtedly run, contract for the delivery of ore at low prices, charging at the same time a high rate of interest on all advances, the result being that only the richest mines or those most favorably situated have been able to avoid, sooner or later, a state of bankruptcy. The completion, however, to Oruro of the Antofagasta Railway is already producing a most beneficial effect. Deposits hitherto untouched and mines worked in a desultory manner with little or no profit will undoubtedly now be taken in hand, and may be expected to pay well, while those at present in production will largely increase their output with the aid of grinding and concentrating machinery. Water power is not usually available in the immediate vicinity of the mines and the primitive methods employed for grinding the ore by manual labor under rocking stones, or with small edge runners worked by mules, do not admit of any reasonable amount being treated. Hitherto, only the richer classes could be touched, anything below 10 or 15 per cent not paying expenses; in many of the

mines, consequently, large quantities of such poorer ores have been left untouched that with cheap grinding would be available.

Some of the more important lodes of the Oruro silver mines are composed of iron pyrites from 1 to 6 feet wide and frequently containing from 5 to 20 per cent of tin oxide associated with ores of silver and interspersed through the mass. In these cases, the tin forms a valuable by-product, being extracted with but little extra expense by simply washing the tailings after treatment by the amalgamation process for silver. This washing has hitherto been commonly effected by hand, the tailings being fed in at the head of slightly inclined channels a foot wide and some 6 or 8 feet long, supplied with a moderate stream of water, the material being constantly raked up and turned over by means of a small, thin board; the lighter, earthy portion is gradually separated and carried off, the tin oxide finally remaining of a lye of 65 to 70 per cent, when it is dried and sacked for export. Common hand buddles are also employed, and of late Frue vanners have been introduced with fairly satisfactory results, though the unequal feeding by hand is objectionable.

The concentrated tin ore, or barrilla, is also smelted on the spot, with charcoal, in small vertical blast furnaces, and run into 50-pound slabs. The loss, however, is not less than 20 per cent; consequently, in the Oruro district but little is reduced. From Potosi, owing to higher freights to the coast (£18 per ton), all the tin is exported in the metallic form.

Toward the northern part of the Bolivian tin zone, what promises to be an important deposit has lately been opened up in the La Paz Cordillera, on the base of the snow peak Huaina Potosi. The ore is possibly superficial, but it is of the finest quality, a rough grinding and washing raising it to a lye of 70 to 73 per cent.

Further south, in the cordillera of Quimsa Cruz, lodes of fine tin exist, especially at high altitudes near the snow line. They have been worked at intervals, but, owing to the difficulties of transport, hitherto with but little profit.

Following these, are the Collquiri silver and tin mines, which have, at times, given a large production, and which, with increased facilities, will no doubt prove important. Still further south, the richest tin district is encountered in the hills and ranges immediately to the east of Oruro and Lake Poopa, where the mines of Negro Pabellon, Villacolla, Morococala, Huanuni, Llallagua, Challa, Apacheta, and Avecaya follow each other at short intervals.

All these mines are situated at an altitude of some 14,000 feet above sea level and they contain well-defined lodes of fine ore, which occasionally attain a width of 2 feet with a lye of 60 per cent.

In Negro Pabellon, tin-bearing pyrites has made its appearance at a depth of

200 feet, while in Morococala, the same depth has been reached without as yet any change.

The Huanuni district has for many years been the most important tin-mining center. A splendid conical mountain, Pozoconi, rising some 1,800 feet above the level of the adjoining ravine, is traversed by a multitude of lodes and veins, which have been largely worked. While many of these, at depths of from 100 to 200 feet, run into tin pyrites, in one of the principal lodes crossing the summit of the mountain the pure ore has been followed down for 600 feet without alteration.

Most of the lodes in Negro Pabellon, Morococala, and Huanuni present continuous veins of solid tin stone, of variable width, up to some 2 feet, and, under these circumstances, as might be expected, some difficulty is experienced, owing to the extreme hardness both of the vein itself and of the adjoining rock; but seams of clay, containing interspersed nodules and grains, are also met with and are worked to advantage, while from the tin-bearing pyrites the ore is extracted by calcination in ovens and subsequent grinding and washing.

The Challa-Apacheta mines are situated about 10 miles south of Huanuni, the lodes traversing low hills, rising some 250 feet above the neighboring ravine. One of these lodes is remarkable as possessing the unusual width of from 25 to 30 feet, the tin ore, in the form of grains and sand, being so thickly interspersed through a slighty argillaceous matrix as to give a mean lye for the whole mass of some 20 per cent. This lode has been explored horizontally over an extent of 250 feet, and to about the same distance vertically below the surface. When pyrites is encountered, as might be supposed from its composition, the lode is extremely soft, the contents being worked out with pick and shovel at a low cost. It requires, however, a certain amount of grinding to reduce the tin particles to a uniform size and admit of satisfactory washing on the vanner. What appears to be a continuation of the same lode is met with in an adjoining hill, but under very different conditions. It is here a comparatively narrow hard vein, from 12 to 18 inches wide, in parts very solid, but with more or less admixture of pyrites, requiring calcination before grinding. This calcination is effected in heaps in the open, a very small amount of fuel at the base being sufficient to start combustion, which is then maintained by the sulphur present.

One of the most important and productive tin mines at the present time is that of Avecaya, situated in a lofty mountain at the southern extremity of the Oruro tin district. The lodes are from 1 to 3 feet wide, giving considerable masses of solid ore, averaging some 40 per cent of the metal.

The mining district of Berenguela is situated about 45 miles east of Oruro, on the heights immediately south of the Argue quebrada. It was extensively worked by the Spaniards, but chiefly for silver, in which many of the lodes

appear to have been rich. Those containing tin are distinct and nearly virgin. The tin oxide occasionally occurs massive and pure, but for the greater part, exists in the form of minute grains, interspersed through a ferruginous and siliceous matrix from 3 to 6 and even 9 feet wide. This substance is soft and easily broken down with the pick at a trifling cost, but requires fine grinding for the satisfactory extraction of the tin. Several samples examined by the writer showed much uniformity of composition, giving 7 per cent of metallic tin. On grinding with water, some 50 per cent of the earthy matter is almost immediately carried off, when the residue, consisting of siliceous particles, requires further stamping to reduce it. On washing, the tin oxide remains as a fine white or light yellow sand.

Tin from the Berenguela district is said to be of a superior quality to any other mined in Bolivia. A fine, permanent water power, suitable for "Peltoa" wheel or turbine exists at a distance of 800 to 1,000 meters from the mines.

The tendency of tin ore to degenerate into pyrites is again illustrated in Berenguela, where, in one of the mines, this change occurs at a depth of 150 feet.

In addition to the deposits already mentioned, many others exist, though, however, of less importance; while the ravines, descending from some of the mines such as Negro Pabellon, Morococala and Huanuni are more or less rich in stream tin and have been to some extent worked, the washed product giving 62 to 66 per cent.

The celebrated silver mines of Potosi have, for many years, furnished considerable quantities of tin, which has also been worked of late years in the mines of Tasna. The conditions under which it occurs appear to be very similar to those which exist in Oruro.

The annual exportation of concentrated tin ore from Bolivia at the present time appears not to be above 400 or 500 tons per month.

Chapter XII.

BANKS, MONEY, WEIGHTS, AND MEASURES.

BANKS.

The banks of Bolivia are chartered by the General Government and are of two classes, namely, banks of emission, deposit, and discount, and mortgage banks. At present, there are two of the former and three of the latter, with branches in all the leading cities of the country. In view of the remarkable success attending these institutions a brief statement of their origin and history will doubtless be of interest.

BANCO NACIONAL DE BOLIVIA.

This bank was organized in June, 1872, as the successor of the Banco Boliviano, founded in 1868, by Mr. Charles Rand, of New York, now with Messrs. W. R. Grace & Co., of that city. Its capital stock is 2,600,000 bolivianos, which is fully paid up. It is authorized by the terms of its charter to issue notes in proportion to 150 per cent of its paid-up capital. Its main branch is located in Sucre, the capital of the Republic, while it maintains subordinate branches in La Paz, Potosi, Cochabamba, and Tarija, and reserve agents in Oruro, London, and Paris. The principal business is done by the La Paz branch. In addition to accumulating a reserve fund of 520,000 bolivianos, it has paid, according to official documents, an annual average dividend of 18.62 per cent upon its paid-up capital of 2,600,000 bolivianos, and some years as high as 34 per cent. Its net earnings for the fiscal year ended June 30, 1890, was 420,199.96 bolivianos, at which date its circulation was 4,337,420 bolivianos and its deposits 1,674,153 bolivianos. The following general balance of this bank for June 30, 1890, will be

of interest as indicating the character and amount of business done by the Bolivian banks:

General balance on June 30, 1890.

BANCO DE POTOSI.

This bank commenced operations in November, 1887, with a paid-up capital of 1,000,000 bolivianos, which it is now arranging to increase to 2,000,000 bolivianos. It, also, is authorized to issue notes in the proportion of 150 per cent of its paid-up capital. The main branch is located at Sucre, while it maintains minor branches in Potosi and Cochabamba, and banking agencies in Oruro, Tupiza, Colquechaca, Santa Cruz, Tarija, Antofagasta, La Paz, Tacna, Salta, Rosario de Santa Fé, and in London and Paris. On June 30, 1890, the bank had in circulation notes to the amount

of 1,422,639; deposits, 741,226.16. Thus far, this bank has paid an annual dividend of 10.32 per cent.

CREDITO HIPOTECARIO DE BOLIVIA.

This bank was established in January, 1870, with a subscribed capital of 1,000,000 bolivianos of which 100,000 bolivianos only has been paid in. It is the first bank of this character organized in Bolivia, and its success has been phenomenal. Its principal place of business is La Paz, with branches and agencies in different parts of the country. It has for many years paid a regular annual dividend of 40 per cent on its subscribed capital, and its managers expect to shortly be able to pay an annual dividend of 100 per cent. This is perhaps the most successful mortgage bank in the world. Starting in business with but 100,000 bolivianos of paid-up capital, it has thus far paid 40 per cent annually on 1,000,000 bolivianos, while its shares are eagerly sought after at 440 bolivianos per share, or at a premium of 340 per cent. Its loans for the first half of 1891 amounted to 486,000 bolivianos. At the close of 1891, the amount of its loans and the value of its securities therefor were:

	Bolivianos.
Amount of cedules issued	3, 730, 700
Value of its mortgaged property	8, 187, 185

BANCO HIPOTECARIO GARANTIZADOR DE VALORES.

This bank was founded November 30, 1886. Its principal branch is in Sucre, with subordinate branches and agencies in other parts of the country:

	Bolivianos.
Its nominal capital is	10, 000, 000
Subscribed capital	1, 000, 000
Paid-up capital	100, 000
Number of shares	1, 000

This institution is also in a most prosperous condition. At the close of 1889, the amount of its loans and the value of its securities were:

	Bolivianos.
Amount of cedules issued	1, 516, 900
Value of its mortgaged property	4, 275, 218

BANCO HIPOTECARIO NACIONAL.

This is a new institution, organized in 1890. It began business with a paid-up capital of 100,000 bolivianos. At the close of 1891, its loans and the value of its securities were:

	Bolivianos.
Amount of cedules issued	200, 300
Value of mortgaged property	500, 000

The following half-yearly balance of the Credito Hipotecario de Bolivia will serve to indicate the character and amount of business done by the mortgage banks of Bolivia:

Forty-fifth half-yearly balance on June 30, 1892.

DR.	*Bolivianos.*	
Number of cedules in circulation	3, 983, 200. 00	
Interest on cedules in circulation	4, 355, 630. 28	
Value of cedules on deposit as pledged securities	241, 800. 00	
Value of judicial deposits	32, 404. 42	
Interest on cedules not collected	6, 360. 00	
Bills payable	21, 239. 60	
Value of unredeemed cedules	31, 500. 00	
Paid-up capital	100, 000. 00	
Undivided profits	502, 248. 41	
Reserve fund	20, 000. 00	
Amount of dividend ordered	55, 890. 90	
Amount deposited to anticipate payments	3, 967. 50	
Time deposits	10, 070. 00	
Dividends uncalled for	900. 00	
Provisional deposits	2, 283. 82	
CR.		
Amount of loans		8, 692, 756. 69
Amount of its own cedules purchased and owned by the bank		123, 200. 00
Real estate		19, 500. 00
Amount due on loans		171, 554. 50
Value of cedules on deposit as pledged securities		241, 800. 00

Cash		40, 939. 54
Bank furniture		2, 778. 02
Pending claims		11, 160. 71
Total		9, 367, 494. 93

While the notes of the banks of emission are redeemable in silver, this has been rendered impracticable owing to the fact that through the inordinate disposition of the Indians to hoard silver, and the large amounts annually exported to Europe by the importing houses of the country, silver coin has hitherto been practically withdrawn from circulation as fast as the Government has been able to coin it. The total coinage at the Government mint in Potosi for the calendar years 1885 to 1889, inclusive, was $6,379,255.79, and yet at the close of 1889, the total silver coin in the banks of Bolivia was but about 200,000 bolivianos, while but a nominal amount was in circulation.

Owing to the high price of silver abroad, the Government was able to purchase but little at prices that justified its coinage, and therefore, the stock of silver coin in the country continued to diminish until it resulted in a depreciated paper currency. In order to relieve the situation, an Executive decree was issued, dated November 22, 1889, requiring the owners of all mines producing piña or bar silver to sell one-fourth of their monthly production to the Government for coinage into 20-cent pieces. But as the price offered was about 7½ per cent less than the market value, and this decree had not the force and effect of law, the mine owners refused to sell, finding it more profitable to export it, and therefore, this attempt to relieve the banks failed.

The Congress of 1890, however, again took up this matter, and provided, by suitable legislation, that all mine owners producing silver bullion should sell to the Government, at the market price, one-fourth of their total production for the purposes of coinage.

By a subsequent act, dated October 26, 1890, the Executive was authorized to have coined either in the United States or Europe, 5 and 10 cent nickel pieces to the amount of 200,000 bolivianos. By an amendment, dated September 29, 1891, this was increased to 400,000 bolivianos. In this way, the Government has succeeded in restoring silver to its proper ratio in the circulating

medium of the country, and thereby, has enabled the banks to resume specie payments.

MONEY.

The money in use in Bolivia embraces silver, nickel, and copper coins, and bank notes. The monetary unit is the silver boliviano (dollar), which weighs 25 grams, and is equivalent at par to the 5-franc piece, or 48 pence. As the Government mint discontinued the coinage of the silver boliviano several years ago, it is no longer in circulation. The fractional coins are: Silver, 5, 10, 20, and 50-cent pieces (15 and 30-cent pieces are still in circulation, though their coinage has been discontinued); nickel, 5 and 10-cent pieces; copper, 1 and 2-cent pieces. The present 20-cent pieces contain but 4.60 grams, and are coined nine-tenths silver and one-tenth copper, and 8 per cent light in weight. The same ratio is observed in the coinage of the other fractional silver coins.

The paper currency consists of bank notes of the denomination of 1, 5, 10, 20, 50, and 100 bolivianos, issued by the Banco Nacional de Bolivia and the Banco de Potosi. These notes, as before stated, are redeemable in silver at sight. Although the national banking law limits the issue of these banks to 150 per cent of their paid-up capital and requires that the latter shall be deposited in silver in the vaults of the banks and held as a reserve for the redemption of their notes, this is not observed in practice, as will be seen by a comparison of the circulation at the close of 1889 with the amount of silver then in their vaults. Owing to the difficulty in securing silver for small transactions the practice obtains of making change by tearing bank notes of the denomination of 1, 5, and 10 bolivianos into two parts and circulating each half as the value of 50 cents, 2.50, and 5 bolivianos respectively.

WEIGHTS AND MEASURES.

Although Bolivia has promulgated the French metric system, which is in official use in the Republic, the people still adhere to the Spanish system of weights and measures.

The vara is equal to 0.927 of a yard; the league is equal to 6.666 varas or 5.55 kilometers; the ton to 20 hundredweight; the hundredweight or quintal to 4 arrobas (quarters) or 100 pounds or 46 kilograms; the arroba of wine or spirits to 8.044 gallons. In weighing minerals, the cajon is reckoned at 50 quintals and the marc (marco) at 8 ounces or 230 grams.

Chapter XIII.

TRADE ROUTES AND COMMERCE.

Nature has denied to Bolivia the usual facilities for trade enjoyed by most countries. Her foreign and internal traffic must traverse long distances, precipitous mountains, and inhospitable plains. Her principal trade routes are through Chilean and Peruvian territory to the Pacific seaboard, although considerable traffic passes to the Atlantic Ocean, via the Argentine Republic and over the Amazon River and its tributaries through Brazil. The Pacific coast trade is carried on through the Peruvian port of Mollendo and the Chilean ports of Arica and Antofagasta.

THE ARICA ROUTE.

The shortest course is that via Arica, which involves a land transit of 240 miles from La Paz across the Cordillera of Tacora to Tacna, and thence by railway to Arica, 40 miles distant. Pack-mules usually occupy about seven days, donkeys nine days, and llamas fifteen days in making this journey to and from La Paz. The trade of the departments of Oruro, Cochabamba, and in part, that of La Paz, is carried on through this port. But for official returns, the enormous traffic claimed for this precipitous mountain route would seem incredible. In the annual report for 1890 of the Director General of Statistics of the number of cargoes of merchandise and sundry articles imported to Bolivia during 1889

through the custom house at Arica, and either from thence or from Tacna transported by mules, donkeys, and llamas across the cordilleras to the provinces of Oruro, Potosi, La Paz, Cochabamba, and Sucre, the following totals are given:

Number of cargoes transported by mules, 11,935; by donkeys, 24,522; by llamas, 25,999; total, 62,456, having a total weight of 394,040 arrobas or 9,851,000 pounds of freight.

As the average cargo for a mule is 225 pounds, for a donkey 150, and for a llama 100 pounds, the amount of freight thus carried over the cordillera to the interior of Bolivia, from this one port, would furnish cargoes for 43,782 mules, or 65,673 donkeys, or 98,510 llamas, or an average of 69,321 pack animals. While there are no statistics showing the amount of freight exported during 1889, it is fair to conclude that, as the annual exports of Bolivia are more than twice its imports, at least as much cargo was transported by this route to the coast as from it, during this period, thereby making the total for the year not less than 19,702,000 pounds, and requiring a corresponding increase in the number of pack animals to transport it.

The recent extension of the Antofagasta Railway from Uyuni to Oruro is likely to divert much of this traffic to the all-rail route to Antofagasta. This, however, will be more than recovered to the Arica and Tacna Railway upon the extension of its line to Oruro and La Paz, as is now proposed. There is no doubt that this route and that of Arica, together with their extensions to Potosi, traverse the richest mineral districts of the entire globe.

MOLLENDO ROUTE.

The principal part of the trade from La Paz and the lake provinces, including that of the rich copper districts of Corocoro, is by steamers up the Desaguadero River, and across Lake Titicaca to Puno, and thence by the Mollendo, Arequipa, and Puno Railway across Peru to Mollendo. The distance from La Paz is 479

miles, viz: land transit from La Paz to Lake Titicaca, 45 miles: lake transit, 110 miles; railway transit to the coast, 324 miles.

The Bolivian traffic by this route is something enormous, and is steadily increasing. It is not uncommon to see from 1,000 to 1,500 mules receiving and discharging cargo at Chililaya,, the Bolivian port of Lake Titicaca, for La Paz and other interior towns.

ANTOFAGASTA ROUTE.

This is also a continuous railway route extending from Oruro, 150 miles south of La Paz, to the Pacific coast at Antofagasta, distant from Oruro 573 miles, and from La Paz 723 miles. The recent extension of this narrow gauge line from Uyuni to Oruro, a distance of 312 miles, which was opened to traffic April 29, 1892, makes it a competing line for the Pacific coast trade with that of the Mollendo and Puno standard gauge and the lake and river steamers owned and operated in connection therewith.

The great bulk of the commerce of the departments of Chuquisaca, Potosi, and of the southern part of Oruro, is transported by this Antofagasta line, notwithstanding the Argentine North Central Railway is rapidly approaching the southern frontier of Bolivia, being now opened to traffic as far north as Jujuy (pronounced *Hoolooee*, instead of *Wewee*, as it is generally given).

ARGENTINE ROUTE.

A fourth and longer outlet is that through Argentine territory to the Atlantic. The commerce of the province of Tarija, and to some extent, that of Potosi and Chuquisaca pass this way. This route involves a land transit of about 770 miles from Pupiza and Tarija, the location of the south Bolivian custom-houses to Jujuy, the terminus of the North Central Railway, and thence 836 miles by rail to Rosario on the Parana River, and thence 246 miles by steamer to the Atlantic.

The great distances to be traversed by this route are shown by the following table:

	Miles.
Buenos Aires to Rosario by steamer	240
Rosario to Jujuy by rail	836
Jujuy to—	
Tarija and Tupiza by cart road	267
Potosi by cart road	420
Sucre by cart road	507
Cochabamba by cart road	717
Uyuni (Antofagasta Railroad station) by cart road	300
La Paz by rail and cart road	762

The amount of tin, silver, bismuth, and other products passing this way for the month of January, 1889, according to the custom-house valuations, was 123,951.55 bolivianos, of which 112,405.25 bolivianos were exports and 10,946.30 bolivianos were imports. Assuming that this was an average month, the annual traffic by this course is, in round numbers, about 1,500,000 bolivianos.

PARAGUAY RIVER ROUTE.

This route extends from Puerto Suarez and Puerto Pacheco, farther south on the Paraguay River and about 475 miles eastward from Santa Cruz de la Sierra, down the Paraguay and La Plata to the Atlantic Ocean. These are comparatively new ports, established to meet the demands of the growing trade of eastern and southeastern Bolivia with the Atlantic seaboard.

As there are no published reports of the commerce of these ports, it can not here be even approximately given. If the projected railway from Santa Cruz de la Sierra to Puerto Pacheco, and that of Gen. Thomas O. Osborne, of Chicago, from Asuncion to Sucre are built, the Paraguay River is destined to become one of the most important and profitable trade routes of the Republic.

AMAZON RIVER ROUTE.

This outlet extends from Villa Bella, the Bolivian port at the confluence of the Mamore with the Madeira River, thence via

the Madeira (or Madera) and Amazon rivers through Brazil to the Atlantic Ocean. In addition to about 35,000 quintals of rubber annually exported from northern Bolivia via the Purus and Amazon, large quantities of this valuable product are brought down the Madre de Dios, Beni, and Itenez (Guapore) rivers to Villa Bella and thence shipped to Europe.

The latest published report from the custom-house at Villa Bella is for the last quarter of 1888. According to this official statement, the imports for that quarter amounted to 1,785 bultos and the exports to 5,637, on which duties to the amount of 16,110.83 bolivianos were collected. As this report fails to furnish further information, it is impossible to here give the probable annual value of Bolivia's foreign trade by this route.

COMMERCE.

The commerce of Bolivia is mainly with Germany, Great Britain, and France, and in the order named. There is also considerable trade with Chile, Peru, and to a limited extent with the United States. The chief imports are cotton and woolen manufactures, silks and fancy goods, articles of millinery and men's furnishing goods; hardware and cutlery, steel and iron; china, crystal, and porcelain ware; furniture, including brass and iron bedsteads; jewelry, clocks, and watches; drugs, wines, and liquors; preserved fruits and meats; sugar, flour, kerosene, mining machinery and tools; iron bridges, carriages, railway supplies, etc.

The exports are silver, lead, tin, copper, bismuth, borax, sulphur hides, leather, furs, alpaca and sheep wool, guano, a superior quality of Peruvian bark known as calisaya, rubber, cacao, and a small amount of coca and coffee. While it would be interesting and instructive to give, in this connection, the annual commerce of Bolivia for a series of years, this is impossible, as but few reliable data exist upon which to base an independent investigation, while to follow the statistics hitherto published, would be to mis-

lead those interested in the subject. The only estimate obtainable of the internal trade is that furnished by the report, already mentioned, of Col. Church to the Governments of Bolivia and Brazil, in 1877, in which it is placed at £15,000,000 or $73,000,000 per annum.

These figures are not here given as authentic, and are therefore submitted without comment other than to venture the opinion that the internal trade of Bolivia is, at the least, one-fourth greater to-day than in 1877.

The nearest approach to anything like a systematic and reasonably satisfactory official statement of the foreign trade of the country for any one year is that for 1886. The chief articles of export were gold, silver, bismuth, copper (barrilla, etc.), tin, Peruvian bark, coca, hides, tobacco, alpaca and sheep wool, coffee, flour, corn, sulphur, leather, chocolate, cotton, vicuña robes, and chinchilla skins, in exchange for wines, liquors, cotton, woolen, and silk goods, edibles (including preserved fruits and meats), ready-made clothing, small fancy articles, jewelry, clocks and watches, drugs and paints, kerosene, flour, furniture, hardware, machinery, etc. The total of these exports and imports for 1886 is represented as follows:

	Bolivianos.
Imports	5,983,453.00
Exports	12,034,670.18
Total	18,018,123,18

Equal in United States currency to $11,054,063.19.

This statement is valuable as indicating the character of Bolivian commerce rather than its annual volume. In point of quantity, it is manifestly wrong. Of the 400,000 quintals of rubber annually shipped abroad from the Purus River country, in Bolivia and Brazil, 35,000 quintals, according to the Report of the Minister of Finance and Industry for 1891, are exported by Bolivia. This statement not only omits this item, but the entire imports and exports of the department of Beni passing through the custom-

house at Villa Bella, at the confluence of the Mamore and Madeira rivers; also those of the department of Santa Cruz passing via the custom-house at Puerto Suarez, on the Paraguay River.

That this statement is misleading, is further shown by a comparison of the total commerce of 1886, as thus given, with that for the same year through Argentine territory alone, exclusive of that passing via the Paraguay and Amazon rivers to the Atlantic Ocean. According to the report for 1886 of the Director-General of Statistics, the amount so passing, as taken from the custom-house reports of Tupiza, Estarca, and Mojo, was as follows:

	Bolivianos.
Total imports, 95,674 bultos, officially valued at.....	1, 542, 756. 43
Total exports, 16,091 bultos, officially valued at.....	3, 274, 928. 68
	4, 817, 685. 11

When it is remembered that but a small fraction of the trade of Bolivia goes out or comes in via the Atlantic and that the imports for the whole country during 1886, as given in the statement now under review, were but 5,983,453 bolivianos and the exports but 12,034,670.18 bolivianos, this comparison becomes all the more striking. These figures would give to this interior Argentine route practically one-fourth of the commerce of the entire country, when every one at all conversant with the subject knows that not one-tenth of the trade of Bolivia passes that way, and, according to the official returns for the month of January, 1889, already referred to in this chapter, it will not exceed one-twelfth.

These facts are alone sufficient to prove the unreliable character of this statement, either for the period covered by it or as an index to the aggregate annual commerce of the country.

While the difficulties to be met with, in any attempt at independent investigation, have already been pointed out, the following figures are submitted as an additional demonstration of the utter worthlessness of these totals for 1886, and at the same time, as furnishing an approximately correct statement of the annual for-

eign trade of the country. The total silver production of Bolivia for 1886 was $9,500,000, and for 1890 and the first half of 1891, it was $11,020,691 and $6,819,787 respectively.

As the production for the last half will doubtless equal that of the first half of 1891, the total for the year may be safely set down at $13,639,574. The coinage for the first six months of 1891 was $516,731, and, allowing the same for the last half, the total will be $1,023,462. Adding to this, the very liberal allowance of $500,000 for use in the industrial arts, there would remain for export $12,106,112.

According to official and other data, from three-fifths to two-thirds of the exports from Bolivia consist of silver. The weight of authority, however, is that it represents but three-fifths of the exports, thus making a total of $20,176,850, made up as follows:

	Dollars.
Silver	12, 106, 112
All other exports, including gold, copper, tin, bismuth, lead, and rubber, etc	8, 070, 738
Total	20, 176, 850

Assuming that the annual imports, as indicated by the foregoing statement of the commerce of Bolivia for 1886, are but 50 per cent of the annual exports, and that the same ratio holds good for 1891, as it doubtless does, and more, in view of the accelerated, importation caused by the construction of the 312 miles of railway from Uyuni to Oruro and the largely increased supply of mining machinery brought into the country, the imports would amount to $10,088,425, thus making the total trade for the year $30,265,275.

Tested by the well-known fact that all of the silver exported from Bolivia is in payment for imports, the amount set down to imports in this calculation is more than $2,000,000 too small, and should be increased to $12,106,112 to correspond with the amount of silver exported.

The total trade of the country for 1891 was therefore approximately as follows:

	Dollars.
Silver exported	12, 106, 112
All other products	8, 070, 738
Exports	20, 176, 850
Imports	12, 106, 112
Total	32, 282, 962

As the value of a Bolivian dollar, at the average exchange of 30 pence, is 63 cents in United States currency, the total commerce of the country as expressed in Bolivian currency, would amount to 51,242,796 bolivianos. Although the annual trade of Bolivia, according to these figures, is nearly three times greater than is usually credited to the country, they are here submitted as the result of a careful study of the subject during two years residence in the country, and as being substantially correct.

In the carefully prepared article on Bolivia by Mr. I. de Veitelle, editor of D. Appleton & Co.'s foreign publications, published in the American Cyclopædia for 1879, Mr. de Veitelle says in discussing this subject:

Large quantities (of silver) have always been exported secretly, the value of which there is no means of determining. Certain it is, however, that all the silver sent out of the country is in payment of imports. Ever since 1850, the yield of the silver mines has steadily increased, and it is now estimated at an annual value of not less than $10,000,000, exclusive of the product of the Caracoles mines. Gold, too, has at all times been exported on an extensive scale, but secretly. * * * Merchants who have attentively studied this subject are of opinion that the aggregate value of the gold, copper, and tin at present exported is about $5,000,000 a year, which, with $10,000,000 for silver, constitutes an annual value of $15,000,000 for metal exports alone. * * * Notwithstanding the absence of positive statistics, as the Bolivian imports are known to consist mainly of manufactured goods, an approximated idea of their minimum values may be arrived at thus:

Let the population be regarded as made up of (1) 325,000 Indians in a state of savagery and not submissive to the laws of the land; (2) 1,000,000 civilized Indians; (3) 500,000 whites, forming the first or upper class; and (4) 500,000

mestizos, constituting the second class. The civilized Indians, the most useful element of Bolivian society, being for the most part land owners, farmers, cattle rearers, etc.—in fine, the factors of the nascent industries of the country—may, in order to avoid possible exaggerations, be excluded from the proposed estimate. Nevertheless these Indians, besides their usual dress, which is exclusively of home manufacture, make liberal expenditures on gala dress for their carnival and other feasts, in the regular observance of which they yield to none. If, then, the moderate sum of $30 be assumed as the yearly outlay of the 1,000,000 individuals of the first and second classes (500,000 whites and 500,000 mestizos) for dress and such other necessaries or luxuries as are not produced in the Republic—church ornaments, jewelry, watches and clocks, house ornaments, fancy wares, stationery, books, school supplies, musical instruments, hardware, cutlery, wrought and cast iron, agricultural and mining implements, machinery, etc.—the total value of the foreign merchandise annually imported into Bolivia will be $30,000,000. And it may be affirmed without fear of challenge that this estimate is far below reality.

While the estimate of $30,000,000 for imports, as here given by Mr. I. de Veitelle, is believed to be too great, this extract from his interesting and instructive article is here quoted as fully sustaining the more conservative estimate.

Chapter XIV.

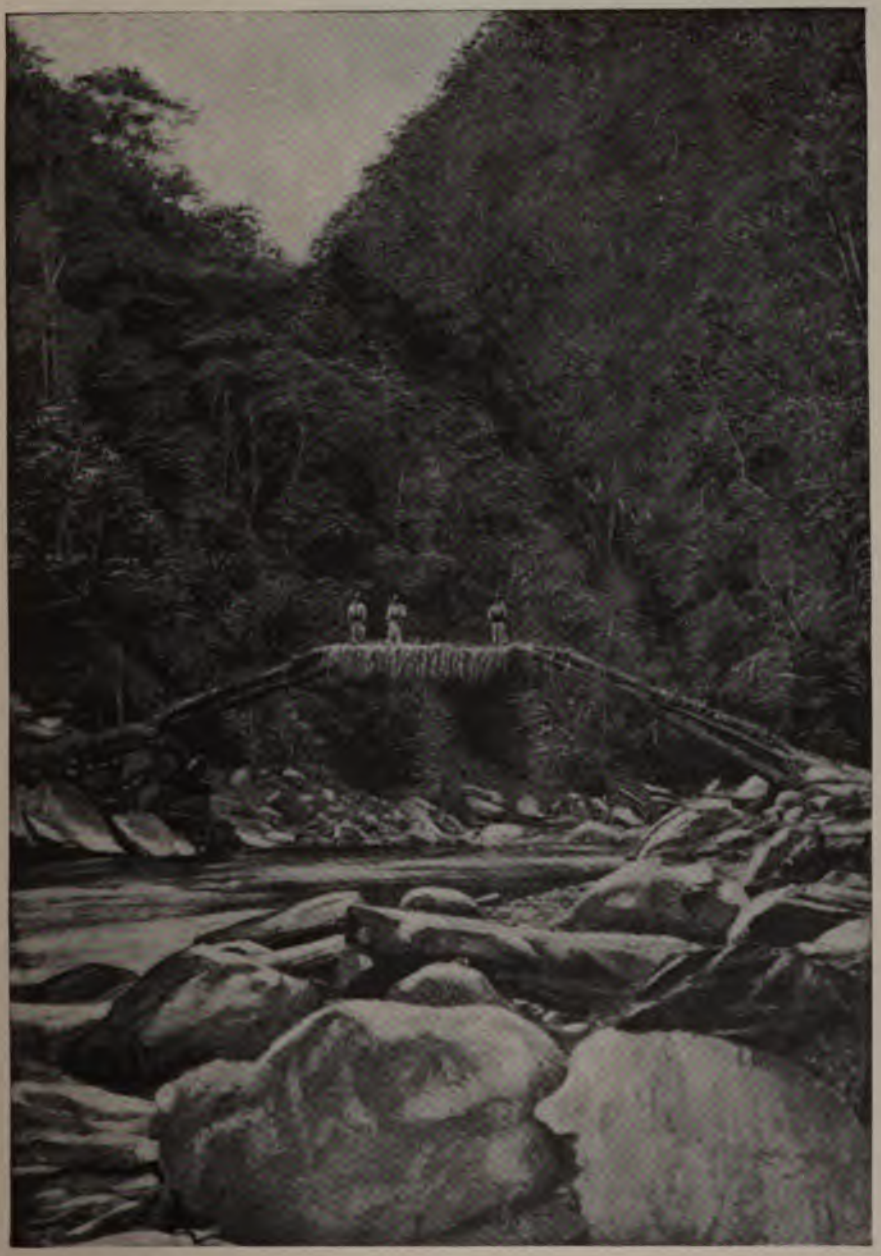
MEANS OF COMMUNICATION.

Under this heading will be considered highways, railroads, and telegraphs.

PUBLIC HIGHWAYS.

The public highways in Bolivia are either national or municipal. The national are built and maintained by the Government from the annual appropriations made therefor by the national congress. They communicate with the principal cities and mining centers of the Republic. The topography of the country is such as to admit of but few wagon roads east of the altiplanicie or high table-lands of western Bolivia.

The most expensive national thoroughfares, both in cost of construction and maintenance, are those built by Indian labor in the upper Andes for the exclusive use of pack animals. Numerous troops of mules, burros, and llamas daily toil up and down these narrow and tortuous trails or wend their way through the deep and narrow passes and around the sharp and precipitous angles of the cordilleras, bearing their burdens of tropical fruits, coca, cacao, coffee, etc., from Yungas and other warm valleys along the eastern declivities of the Andes to the markets of La Paz and other cities in exchange for flour, dry goods, alcohol, etc. The vast interior commerce of Bolivia, as thus carried on, is a genuine surprise to every foreigner visiting the country, and especially as it is conducted almost entirely by Indians.



A Native Bridge.

The construction and maintenance of the municipal roads is under the control of the several municipalities. These roads, as a rule, connect the principal cities with the adjacent towns and settlements, and for the most part, are well built. One of the best in the country is the Arce avenue, connecting the city of La Paz with Obrajes, a small village 3 miles distant. This road, which is the principal driving course of the city, was completed this year at a cost of about 75,000 bolivianos. Perhaps the finest municipal highway in the country is that connecting Cochabamba with the baths of Calacala. Those of Sucre, the capital of the Republic, are also well built, and are among the best carriage roads of Bolivia. The best long-distance roads are those connecting the city of La Paz with Chililaya (Puerto Perez), the Bolivian port on Lake Titicaca, 45 miles distant, and with Oruro, a distance of 150 miles. The municipal roads of La Paz and other cities are maintained in much the same way as are the country roads in Ohio and other parts of the United States, all male citizens between certain ages being obliged to work on the public highways one day in each six months or pay in lieu thereof 50 cents (about 33 cents in United States money), the sum allowed the Indians therefor per day, who, with but rare exceptions, do this class of work.

Regular stage lines are maintained as follows:

	Miles.
La Paz to Chililaya, to connect with the lake steamers	45
La Paz to Oruro	150
Oruro to Cochabamba	123
Oruro to Laguinillas	135
Cochabamba to Sucre	195
Potosi to Sucre	77
Total stage service	725

In addition to this, there is now under construction a stage road from Tarija to Tupiza.

The distances between the capitals of the several departments are:

[Measured by leagues of 20,000 feet each.]

Capitals.	Potosi.	Tarija.	Cobija.	Santa Cruz.	Oruro.	La Paz.	Cochabamba.	Trinidad.
Sucre	29	88	187	124	75	124	65	314

Cochabamba	94	153	225	119	41	90	.....	309

RAILROADS.

In his report on the railways of Bolivia to the International American Conference, then in session at Washington (February, 1890), the Bolivian delegate, Señor Juan Francisco Velarde, says:

The central location of Bolivia has retarded the development of its railroads, since it has been obliged to wait until the lines of the neighboring countries should approach its own frontiers before undertaking their extension, as in the case of those from Mollendo to Puno, and from Arica to Tacna, in Peru, which still remain idle within their respective limits, and that of the Central North Argentine Railway, which is now nearing Jujuy, with every probability that it will be extended as far as the Bolivian frontier.

Bolivia has three lines of communication with the Pacific Ocean: (1) by the Antofagasta and Oruro Railway; (2) by the Mollendo and Puno Railway, in connection with the Lake Titicaca and Desaguadero River steamers; (3) by the Arica Railway.

THE ANTOFAGASTA AND ORURO RAILWAY.

This is a narrow-gauge road (75 centimeters) running from the Chilean seaport of Antofagasta to Oruro, a total distance of 922 kilometers or 573 miles. It reaches the great silver district of Huanchaca at Uyuni, 379 miles from Antofagasta. From here, a branch road, 25 kilometers (15½ miles) long, runs to the great

mining properties of the Huanchaca Company. In order to make this connection, the Huanchaca Company was obliged to cut a tunnel 3,307 meters long, a work which occupied five years at a cost of 544,582 bolivianos. On the 29th of April of 1892, the extension of this road from Uyuni to Oruro, a distance of 194 miles, was completed and opened to traffic. It is the intention to extend it on to Corocoro and La Paz, thereby giving it a total length of about 723 miles.

The following table gives the stations, distances, and elevations along this route from Antofagasta to La Paz:

Places.	Distances.	Elevations.

ARICA RAILWAY.

The Arica Railway runs from the Chilean port of Arica to Tacna, a distance of 47 miles. From here, the road is to be extended via Corocoro to La Paz. This proposed extension covers a total distance of 294 miles. At present, traffic is carried on between La Paz and Arica by means of mules and llamas. Owing to the short distance to the coast by this route, the commerce of La Paz, Oruro, and Cochabamba has hitherto largely passed this way. The prolongation of this line to La Paz will be attended by unusual engineering difficulties and enormous cost in ascending the steep acclivities of the Western Cordillera, over which it must pass.

The following table shows the places, distances, and elevations along this route from Tacna to La Paz:

Places.	Distances.	Elevations.	
	Miles.	*Feet.*	*Meters.*

MOLLENDO AND PUNO RAILWAY.

This is a standard gauge road running from the Peruvian port of Mollendo via Arequipa to Puno on Lake Titicaca, a distance of 325 miles. From here, communication is had with Bolivia by the Lake Titicaca steamers crossing to Chililaya, a distance of 110 miles, and thence, to La Paz, 45 miles, across a practically level plain, with the exception of the winding descent into the city, which covers a distance of 3 miles over one of the best constructed gravel roads met with in any country.

The Mollendo and Puno Railway was opened to traffic in 1870, in connection with the lake and river steamers of Titicaca and the Desaguadero River, which are owned and operated by the same company. The Peruvian bondholders, who now own the road, recently secured a concession from the Bolivian Government for the construction of a railway from Desaguadero, the southern terminus of lake navigation, to La Paz, a distance of 66 miles. The object of this proposed road is to hold the La Paz traffic against the competing line of the Antofagasta Railway Company, about to be extended to that city from Oruro.

The following table shows the places, distances, etc., from the Pacific Ocean to La Paz by this route:

Places.	Distances.	Elevations.	
	Miles.	*Feet.*	*Meters.*

La Paz	372¼	12, 307	3, 751. 17

In addition to these several routes to the Pacific Ocean, the configuration and vast area of eastern and southern Bolivia give rise to two additional channels of communication; north by way of the Amazon and south by way of the La Plata to the Atlantic seaboard.

Recognizing the importance of placing the eastern part of the Republic, which, like the western part, has its own distinctive resources and trade, in direct communication with the Atlantic Ocean, the Bolivian Government has recently granted liberal con-

cessions for the construction of railways from the interior of the country to the navigable tributaries of the Amazon and La Plata.

These concessions embrace the following new lines of road: (1) A railway from Oruro to Cochabamba and thence to Trinidad on the Mamoré, which has its outlet to the Atlantic through the rivers Madeira and Amazon. (2) A railway from La Paz through the rich province of Yungas to the head of navigation on the Beni River which unites with the Mamoré at the Bolivian port of Bella Vista to form the Madeira. (3) A railway from Cochabamba to Santa Cruz de la Sierra, the capital of the rich and extensive department of Santa Cruz, and thence to Puerto Pacheco on the Paraguay River. (4) The extension of the Paraguay and Bolivian standard gauge railway now under construction from Asuncion, on the Paraguay River, to the frontier of Bolivia and thence to be built through Bolivian territory to Sucre, the capital of the Republic. This road, of which Gen. Thomas O. Osborne, of Chicago, is the president, follows up the famous valley of the Pilcomayo through what is known as the Gran Chaco, which possesses a dry and fertile soil and a mild and healthful climate, while the Bolivian extension is bounded on either side by some of the richest mining districts of the Republic. From Sucre, it is proposed to continue this road via Oruro, La Paz, and the eastern shore of Lake Titicaca to Santa Rosa, in Peru, where it is to unite with the railway system of southern Peru now being extended from that point to Cuzco. If this road is built it will not only be the most important railway in Bolivia, but will furnish, in connection with the line now under construction from Buenos Aires to Asuncion, continuous railway connection between Cuzco, the ancient capital of the Incas, and Buenos Aires, the capital of the Argentine Republic, over a track of uniform gauge and covering a total distance of about 2,000 miles. It will also be connected with the sea by the Paraguay and La Plata rivers, whose waters are navigable for ocean steamers as far as Asuncion,

the terminus of the road, and for river steamers several hundred miles farther up. (5) A railway from Uyuni, on the Antofagasta line, to La Quiaca, on the Argentine frontier, to meet the proposed extension of the North Central Argentine from Jujuy. A branch is also contemplated from Uyuni to Potosi. As this road, if built, will furnish to Bolivian traffic an important and much needed outlet to the Atlantic seaboard, its promoters have secured perhaps the most liberal railway concession ever granted by the Bolivian Government.

The following act relating to railroads will serve to show the general character of the concessions under which Bolivian railways are now being built.

ACT RELATING TO RAILROADS.

Be it enacted by the Chamber of Deputies.—ARTICLE 1. That the Huanchaca Company of Bolivia is guaranteed an annual interest of 6 per cent for a term of twenty years on the capital which it may invest in the construction of the railway from Uyuni to Oruro. This guarantee shall be obligatory from the time that the railway reaches Oruro.

ART. 2. The estimate and cost of the line shall be verified by the national engineer corps.

ART. 3. The company constructing the railroad shall open it to the public in Oruro within two years from the 1st of January, 1890, paying, in case it should not then be completed, the fine of 400,000 Bolivian dollars.

ART. 4. The same annual interest of 6 per cent is guaranteed for twenty years on the capital employed in the construction of a railway from the city of La Paz to the Peruvian frontier in the department of Puno.

ART. 5. The same interest is guaranteed for twenty years on the capital invested in the construction of the railroads from banks of the river Paraguay and the Argentine frontier to Santa Cruz, the Beni, Tarija, and Sucre.

This concession refers only to the propositions presented to the legislature in 1889.

ART. 6. There is hereby granted to the companies constructing the railroads one square league of ground for each league of track laid; this ground to be in alternate lots, the remaining lands continuing to be Government property.

ART. 7. In case those companies should prefer the granting of lands they will not be entitled to the money guarantee.

ART. 8. The stipulations of responsibility for the payment of the granted guarantee shall not in any case affect the present national income.

ART. 9. All further stipulations bearing upon the present act are left to the power of the executive.

Let this be sent to the Senate for its action.

The Hall of the Chamber of Deputies in La Paz, October 27, 1889.

TELEGRAPHS

Bolivia has telegraphic communications with Peru, Chile, and the Argentine Republic, and thence by cable with the United States and Europe. The following lines are now in operation:

	Kilos.
La Paz to Tacna	370
La Paz to Desaguadero on the Peruvian frontier	100
La Paz to Oruro (opened July 16, 1892)	250
Oruro to Uyuni	310
Sucre to Potosi	140
Potosi to Huanchaca	175
Potosi to Cotagaita	170
Potosi to Colquechaca	140
Cotagaita to Tupiza	90
Cotagaita to Camargo	90
Tupiza to La Quiaca on the Argentine frontier	90
Tupiza to Tarija	190
Huanchaca to the Chilian frontier	300

Chapter XV.

PUBLIC REVENUES AND DEBT.

Public assessments in Bolivia range themselves under the three heads of national, departmental, and municipal.

The first and second are laid to meet the ordinary expenses of the General Government of which the several departmental governments are constituent parts. The third is laid to meet the expenses of administering the municipal governments of the Republic, and is therefore not available for the ordinary expenses of the National Government. Article 26, section 3, of the Constitution provides, however, that the latter may be exacted as a loan by the General Government whenever, in cases of great danger from internal commotion or foreign war, so far imperiling the security of the Republic as to authorize the Executive authority to declare the country in a state of siege, the ordinary revenues of Government are insufficient to provide for the public defense. The national receipts are derived mainly from customs and excise duties.

The customs duties for the fiscal years 1885–1890 were:

	Bolivianos.
1885	1, 882, 264
1886	1, 255, 877
1887	1, 344, 916
1888	1, 749, 035
1889	1, 174, 333
1890	1, 500, 000
1890, Government estimate	1, 726, 000

The budget of 1891 estimates the total receipts as follows:

	Bolivianos.
National receipts	3, 321, 280
Departmental receipts	1, 384, 949
Total	4, 706, 229

The national receipts were made up from these sources;

Customs receipts	1,726,000
Internal revenue	1,595,280
Total	3,321,280

The departmental revenue contemplates receipts from the several departments as follows:

	Bolivianos.	
Chuquisaca	170,659	
La Paz	415,762	
Cochabamba	171,304	
Potosi	266,122	
Oruro	108,502	
Tarija	61,120	
Santa Cruz	113,180	
Beni	78,300	
		1,384,949
Total		4,706,229

The total national expenses for 1891, which include disbursements in behalf of the army, diplomatic and consular representatives, post and telegraph, custom-house officers, public instruction and clergy, and the legislative, executive, and judicial branches of the Government, are fixed at 3,613,697 bolivianos; the department expenses at 1,377,025 bolivianos; total, 4,990,722 bolivianos; receipts for same period, 4,706,229 bolivianos; amount of deficit, 284,493 bolivianos.

As the annual imports are about $12,000,000, and as export duties are levied upon silver, copper, and tin, it would seem that the customs duties should be, according to the Bolivian tariff, much greater than these figures indicate. The cause of this discrepancy is to be found mainly in two facts: (1) Under the reciprocal trade relations with Peru and Chile, their imports, which constitute an important part of Bolivian foreign supplies, are either on the free list or pay practically nominal duties; (2) the duties on imports go largely to the custom-houses of Bolivia's west-coast neighbors through whose ports she is forced to trade.

According to the report for 1890 of the director-general of statistics, the imports of Peruvian products for 1889 through the custom-house at La Paz amounted to 44,754 bultos. During the first half of 1890, there were imported through the same custom-house, free of duty, Peruvian products to the amount of 19,280 bultos. Assuming, in the absence of official returns, that the total Peruvian imports for the latter period amounted to the half-yearly average of 1889, viz, 22,377 bultos, we have: Total Peruvian imports into Bolivia through La Paz custom-house during the first half of 1890, 22,377 bultos; total quantity exempt from customs duty, 19,280 bultos; subject to customs duty, 3,097 bultos; or, in other words, 86 per cent of Peruvian products imported into Bolivia pay no duty whatever. Although, under the present reciprocity treaty with that Republic, certain Bolivian products enter the markets of Peru on equally favorable terms, the balance of trade is so largely in favor of Peru that this treaty is proving a great hardship to Bolivia, as will be seen by the following translation from the Annual Report of the Minister of Finance and Industry to the National Congress of 1891:

[TRANSLATION.]

The Republic of Bolivia anxiously awaits the modification of the treaty of commerce with Peru. The mission intrusted to our minister plenipotentiary, don José Manuel Braun, has for its object the carrying out of this patriotic aspiration.

The reciprocity of duties in the Peru-Bolivian commerce is greatly prejudicial to our treasury. The exportation of Bolivian products to Peruvian markets is not to be compared with the amount of imports from that Republic.

The importation of alcohol and spirits, which is carried on in great quantities by reason of their paying very low duties, is prejudicial to the development of the industries of the country and without benefit to the national treasury.

The injurious effects produced on the Indians, by whom they are consumed, is a sufficient reason to justify an increase of the duties upon the importation of these articles.

The second cause assigned for the disproportion between the

annual trade and customs receipts of Bolivia, namely, that the duties on Bolivian imports go largely to her neighbors, will be made manifest by the following translation from the same report relating to the receipts of the custom house at Arica for 1888:

[TRANSLATION.]

By the compact celebrated with the Republic of Chile, which is in the actual occupation of this Peruvian port, the custom-house of Arica is common (to Bolivia and Chile), and the duties collected on Bolivian commerce are divided in this form: 75 per cent is paid to Bolivia and 25 per cent is reserved by Chile for expenses of administration.

Out of its 75 per cent Bolivia applies 40 per cent annually in payment of its Chilian debt for damages sustained by citizens of that Republic on account of the war.

The receipts for the year 1880 amounted to 1,260,541.96 bolivianos, distributed as follows:

	Bolivianos.
Paid to Bolivia, 35 per cent	441, 189. 66
Applied to Chilean claims, 40 per cent	504, 216. 79
Received by Chile, 25 per cent	315, 135. 51
Total	1, 260, 541. 96

In addition to this, Chilean products, to the amount of 20,518 bultos, were imported into Bolivia during the first half of 1890 free from import duties, being 1,229 more than from Peru during the same period.

PUBLIC DEBT.

The original foreign debt recognized by Bolivia on account of the seizure of the mining properties of Chilean subjects at the commencement of the Pacific war of 1879–1882 was as follows:

	Chilean dollars.
Campañia Huanchaca de Bolivia	2, 207, 032. 56
Compañia Corocoro	2, 818, 000. 00
Compañia Minera de Oruro	286, 956. 50
	1, 238, 841. 60
Total	6, 550, 830. 66

Pursuant to the convention of truce, which was signed between Bolivia and Chile April 4, 1884, 40 per cent of the custom-house

receipts of Arica have been applied annually in discharge of this debt, namely:

	Chilean dollars.
1885	698, 399. 64
1886	409, 746. 77
1887	471, 317. 93
1888	504, 216. 79
1889	469, 259. 48
1890 (first six months)	221, 698. 79
Accrued interest on deposits to this account to December 31, 1889	12, 917. 89
Total	2,787, 557. 29
Balance of foreign debt June 30, 1890	3, 763, 273. 37

As the value of the Chilean dollar is about one-fifth less than the Bolivian dollar, the total foreign debt as expressed in Bolivian dollars is about 3,010,618, or $1,847,000 United States currency. The internal debt is as follows: Amount owing to the National Bank of Bolivia, 621,000 bolivianos; amount owing to the Bank of Potosi, 30,000 bolivianos; amount owing to the Aullagas Mining Company, 5,211 bolivianos; amount owing on sundry loans, war claims, etc., 3,828,705 bolivianos; total national debt, 7,495,534 bolivianos or $4,598,487 United States currency.

In addition to this, is a claim arising out of the conflict of 1879–1882 between Chile, Peru, and Bolivia in favor of the representatives of the United States commercial house of Alsop & Company, formerly of Valparaiso, known as the "claim of the representatives of the late John Wheelwright, liquidator of Messrs. Alsop & Company, of Valparaiso." This debt of 835,000 Bolivian pesos, with interest at 5 per cent per annum from the year 1886, was solemnly acknowledged by the Bolivian Government and its payment secured by a lien on the annual income of its Pacific coast custom house in excess of 405,000 bolivianos per annum. Upon the occupation of Tacna and Arica by Chile, in consequence of the war with Bolivia and Peru, this arrangement was set aside by the Government of Chile. At the request of his excellency,

President Santa Maria, conveyed to the United States minister, Mr. Logan, in 1884, the consideration of this claim was postponed, in the words of his excellency:

Until such time as a definite arrangement with her opponent would leave Chile free to consider the questions growing out of the rights of neutrals.

Chapter XVI.

AGRICULTURE.

The farms (fincas or haciendas) of Bolivia are either owned by Indian communities or by the wealthy townspeople of the Republic. Those of the former are held and cultivated in common by the Aymara and Quichua Indians, whose villages not unfrequently number several thousand inhabitants. Those of the latter are cultivated by the Aymaras and Quichuas who, as a rule, succeed each other from one generation to another as life tenants of their respective fincas, no matter who may chance to be the owner of the land. They also live in communities of from ten to one hundred families, depending upon the size of the finca, thus giving to their united homes not only the appearance but the usual features of an Indian village, prominent among which is a chapel presided over by the resident priest of the nearest provincial capital.

Yoked bullocks only are used for preparing the soil for planting, and horses, mules, and burros for marketing the crops, while both are dispensed with in cultivation, the Indians doing the work with their rude hand implements with the same detail and care as a painstaking gardener. The bullocks are yoked by lashing a light crosspiece of wood immediately behind their horns. To this rude yoke, is fastened the long beam of their wooden plows, which are in all respects similar to those of the ancient Egyptians, except that they have but a single handle, like those now used in Sicily, and instead of the footpiece or point being shod with a metal sock, as were probably those of the Egyptians, a flat iron point, about 2 by 12 inches, is fastened with rawhide at the foot of the crooked stick which serves both as handle and

share, and which is so adjusted as to cut the soil to a depth of from 4 to 6 inches. After thus plowing and cross plowing, the clods are broken by hand and the ground harrowed and cross harrowed by dragging a heavy slab or pole over it laterally until it is perfectly smooth. It is then cut into deep furrows, which serve the double purpose of drilling in the grain and irrigating the growing crop. When the grain is harvested, it is beaten out with flails and then cleaned by throwing it into the air to carry off the chaff. This will serve to illustrate the primitive methods employed by these Indian farmers, who regard all attempts to improve upon them as innovations not to be encouraged.

The landlord's share is always grown separate from the tenant's, the latter being required to give to the cultivation of the crops of the owner or to such other work, either on or off the farm, as he may desire, from two to four days of each week in return for his privileges as a tenant. And thus these Indians become the quasi fixtures of their respective fincas and pass with them to each successive proprietor as an important element in determining the value of the land, although the conveyance in no way binds them to continue as tenants, and yet they are certain to do so, unless when driven out of the valleys, as they occasionally are, by an epidemic of *terciana*, from which many of them die every year.

The soil of eastern Bolivia and of the valleys throughout the Republic is exceedingly fertile. The crops raised embrace fruits, vegetables, sugar cane, cotton, rice, coffee, cocoa, tobacco, alfalfa, and every variety of cereals, with the exception of oats and buckwheat, which have not yet been introduced among the farm products of Bolivia.

The rivers and mountain streams furnish every facility for irrigation, which, for the most part, is an essential condition of successful farming in the present cultivated districts. Owing to the cold climate of the great western plateau the cultivation of the soil is limited, in the main, to the raising of barley, potatoes, quinia, and cañagua, although some wheat is grown in the imme-

climate vicinity of Lake Titicaca. Stock-raising is also an important industry among the farmers of this region. Their surplus products, consisting of wheat, barley straw, potatoes, wool, and mutton, find a ready market at good prices in La Paz, while to this same market are brought in great abundance tropical fruits, vegetables, maize, coffee, rice, cocoa, beef cattle, etc., from the rich valleys of Yungas and other sections of northwestern Bolivia. The commerce of La Paz is much larger than is generally supposed, the annual sales of cocoa alone amounting to approximately 4,000,000 bolivianos.

The products of the soil that, in the near future, are most certain to become important factors in the industrial wealth of the country are those of the forest rather than the field. The world can not match this inland Republic in the vastness and rich variety of its virgin forests and in the quantity and quality of its cinchona trees, from which is gathered the best Peruvian bark produced on the globe.

The number of trees in the leading cinchona districts is:

[illegible]	500,000
[illegible]	70,000
[illegible]	3,500,000
[illegible]	32,000
[illegible]	30,000
[illegible]	10,000
[illegible] other plantations	1,858,000
Total	6,000,000

The following table of comparative analysis by Delondre and Bouchardat gives the yield per 1,000 of sulphate of quinine, which shows the superior quality of the cinchona bark of Bolivia:

[illegible] bark from	30 to 32
[illegible] bark from	15 to 20
[illegible] bark from	15 to 20
[illegible]	12
[illegible] Peruvian, without outer bark)	4
[illegible] (red) from	20 to 25
[illegible] (pale) from	15 to 18
[illegible]	30
[illegible] from Popayan, from	20 to 25

While the Bolivian bark is thus superior to all others—that of Challama, in the department of La Paz, yielding, according to the analysis of Dr. Francisco Salmon, 48 ounces of sulphate of quinine to the quintal (100 pounds)—the annual production of the extensive plantations of India and Australia during recent years, added to that of Bolivia, has so depreciated the market value of quinine that at present there is but little profit in the business. The owners of these plantations, however, believe that present prices will result in the total abandonment of the business in India and Australia, when the market will advance and the cinchona plantations of Bolivia will again be the source of abundant wealth to themselves and of revenue to the Government.

There are no better farming lands in the world than those of eastern Bolivia and the warm valleys of the mountain regions. The earth yields her fruits of both cultivated and spontaneous products in such rich abundance that Bolivia is not likely to ever become a profitable market for the surplus farm products of other nations.

While it is true that considerable flour is at present imported from Chile and California, it is reasonably certain that, within a few years, the supply of Bolivian wheat will be fully equal to the local demand. On the other hand, while the possibilities of farming in Bolivia are practically immeasurable, and the soil is capable of yielding an enormous annual surplus of farm products, their primitive methods of farming, the indifference of the farming classes to the advantages of improved agricultural appliances, the inland position of the country, and the great cost of transportation under existing conditions preclude their cultivation for export. It is equally certain that until the steam train is substituted for the mule train in the overland traffic of the country, and the balsa and canoe of the Indian are replaced by the steamboat on the great fluvial highways of the Republic, Bolivia can not hope to take prominent rank among the agricultural regions of America.

Appendix A.

POLITICAL CONSTITUTION OF THE REPUBLIC OF BOLIVIA.

[Translated by Hon. Rodolfo Aranz, Member of Bolivian Congress.]

Narciso Campero, Constitutional President of the Republic of Bolivia.

Whereas, the National Convention has sanctioned and proclaimed the following Political Constitution:

In the name of God:

The Bolivian people, represented by the National Convention of 1880, sanction and proclaim the Constitution of 1872, with the modifications agreed upon, as follows:

SECTION FIRST.—*Of the Nation.*

ARTICLE 1. Bolivia, a free and independent State, constituted as a unitary Republic, adopts representative democracy as its form of government.

ART. 2. The State recognizes and maintains the Roman Catholic Apostolic religion, and prohibits any other public worship, excepting in the colonial territories, where there will be toleration.

SECTION SECOND.—*Individual rights and guarantees.*

ART. 3. Slavery does not exist in Bolivia.

Every slave is free from the moment he treads Bolivian soil.

ART. 4. Every one has the right to enter the territory of the Republic, to stay or journey therein, and to leave it without any other restrictions than those established by international law, to exercise or engage in any lawful business, to publish personal opinions through the press without previous censure; to teach, subject to the supervision of the State, without any other conditions than those of capacity and morality, to make partnerships, to assemble peacefully, and to make petitions individually or collectively.

Primary instruction is free and compulsory.

ART. 5. No one can be arrested, detained, or imprisoned, except in the cases and according to the forms provided by law, it being required for the execution

of such warrants that they shall proceed from a competent authority, and shall be given in writing.

ART. 6. Any offender *in flagrante delicto* (in the commission of the crime) can be apprehended even without a warrant by any person, with the sole object of taking him before the proper authority, who must examine the prisoner within twenty-four hours after arrest at furthest.

ART. 7. Those in charge of prisons shall not receive therein anyone as arrested, imprisoned, or detained without having a copy in their register book of the respective warrant. They can, nevertheless, receive into the prison bounds those who have been arrested with the object of being brought before the proper judge, but in such case they are under obligation to give an account thereof to the said judge within twenty-four hours.

ART. 8. Attacks against personal security make the immediate authors responsible, and the fact of having committed the offense by order of a superior authority can not be accepted as an excuse.

ART. 9. No one may be judged by special tribunals, nor be submitted to other judges than those named prior to the commencement of the suit. Only those who are under military jurisdiction can be tried by martial law.

ART. 10. No one is compelled to give evidence against himself in a criminal cause, nor against his blood relations up to the fourth degree inclusive, nor up to the second, if by affinity. In no case, can torture or any kind of personal mortification be employed.

ART. 11. The confiscation of private property must never be applied as punishment for a political offense. Private papers and correspondence are inviolable and can not be taken except in cases determined by law and by written order from the lawful judge. No legal action can be taken that is based on private papers that have been violated or stolen.

ART. 12. Every house is an inviolable asylum; it can not be entered in the night season without the consent of the person who lives therein, and in the day time, entrance thereto is only allowed on the written order of the lawful authority, except in the cases of an offense *in flagrante.*

No soldier may be lodged in a private house in time of peace without the consent of the proprietor; nor in time of war except in the manner prescribed by law.

ART. 13. Private property is inviolable; expropriation can not be enforced except for the sake of public utility and according to the law, and with a previous indemnification for its just value.

ART. 14. No tax is obligatory, except when established by the legislative power according to the prescriptions of this Constitution. Any person may apply to the proper judicial authorities against any illegal taxation. Municipal

taxes are obligatory when the necessary steps pointed out by this Constitution have been observed in voting the same.

ART. 15. No money can be withdrawn from the national, departmental, or educational treasuries except in conformity to the respective appropriations therefor. A quarterly account of the public expenditures shall be published within sixty days, at the latest, after the expiration of such period. The Minister of Finance shall publish the accounts relating to the National Treasury; the superintendents those of their respective departments.

ART. 16. Equality is the basis of all taxation and public charges. No personal service can be exacted of anyone if not in accordance with the law or by virtue of a lawful sentence.

ART. 17. Real estate belonging to the church, and property belonging to beneficent and educational establishments, to the municipalities, and to communities or religious corporations, shall enjoy the same guarantees as those belonging to private individuals.

ART. 18. The public debt is guaranteed. All obligations or engagements contracted by the State in conformity with the law are inviolable.

ART. 19. Every person in Bolivia is granted the enjoyment of civil rights; their exercise is regulated by civil law.

ART. 20. The legislative power only has the authority to alter or modify the laws, as well as to dictate regulations or dispositions concerning judicial procedure.

ART. 21. The penalty of death is abolished, excepting only when it is decreed for assassination, parricide, and treason to the country; by treason is understood complicity with the enemy during time of war with a foreign power.

ART. 22. The penalties of public infamy and civil death are abolished.

ART. 23. The acts of those who usurp public functions not belonging to them are null and void, as are also the acts of those who exercise jurisdiction or power unauthorized by the law.

ART. 24. The principles, guarantees, and rights recognized in the foregoing articles can not be altered by the laws that regulate their exercise.

ART. 25. Those who violate constitutional rights and guarantees enjoy no privileges, and are subject to ordinary jurisdiction.

SECTION THIRD.—*Of the preservation of public peace.*

ART. 26. In cases of grave danger, on account of internal commotion or foreign war, that may threaten the security of the Republic, the Chief of the Executive Power may, with the approval of the Council of Ministers, declare in state of siege any part of the territory that may be necessary, and for such length of time as may be deemed requisite.

ART. 27. The declaration of the state of siege produces the following results:

1st. The Executive can increase the permanent army and call to active service the national guard; 2nd, can negotiate the advance that may be indispensable on the national taxes and revenues; likewise negotiate or exact in form of a loan a sufficient sum of money, in case that it (the Executive Power) can not meet the expenses with the ordinary revenues.

In the case of compulsory loan, the Executive may assign the amount to be exacted from each department and it shall be the duty of the municipal councils to make the distribution thereof among the proprietors of their respective districts;

3d. It may reduce the payment of the civil and ecclesiastical list and of the municipal assignments in a sufficient proportion to cover the necessary military expenses caused by the disturbance of public peace; but the said reduction may not exceed the one-half of the amount fixed in the law of estimates (annual appropriations).

4th. The guarantees and rights granted by this Constitution shall not be *de facto* suspended in general through the declaration of the state of siege; but they may be to certain designated persons, accused on good grounds of conspiring against the tranquillity of the Republic, as set forth in the following paragraphs:

5th. The lawful authority may issue orders of summons or arrest against those accused of the crime mentioned in the foregoing paragraphs placing them within seventy-two hours, if possible, from the moment of arrest, before the competent judge, to whom he will hand the documents that have given authority for the arrest, with all the judicial investigations that have been made. If the trial can not take place within the said time it may be postponed until public order is reëstablished; but in no case, except that of amnesty, can the trial be omitted. Should the maintenance of public peace necessitate the transportation to a distance, of the suspected persons, the authorities may order such transportation, provided it is not to a greater distance than 50 leagues nor to an unhealthful place. The banishment or arrest can only take place in the event that the suspected or accused persons do not prefer to leave the Republic.

6th. The Executive may also withhold or retain all private correspondence, without violating it; also require the use of passports for those entering or leaving the territory declared to be in the state of siege.

ART. 28. The Government shall give an account to the next legislature of the use made of the authority conferred by the state of siege, stating the result of the trials enacted and suggesting the necessary measures for the payment of the debts contracted, whether by direct loan or by reduction in the payment of the lists and the anticipated collection of taxes.

ART. 29. Congress shall employ its first sessions in the examination of the accounts referred to in the preceding article, pronouncing their approbation thereof or declaring the responsibility of the Executive power therefor.

ART. 30. Neither Congress nor any association or public gathering can grant to the Executive power extraordinary faculties or the entire national jurisdiction, or agree to give it supremacy by which the life, honor, and properties of the Bolivian people shall be at the mercy of the Government or of any person whatever. Any deputy or deputies who promote, favor, or execute such act, are by so doing, unworthy of the confidence of the nation.

SECTION FOURTH.—*Of Bolivians.*

ART. 31. Bolivians by birth are:

1st. Those born in the territory of the Republic.

2nd. Those born in a foreign country of a Bolivian father or mother in the service of the Republic, or who have emigrated for political causes; these are Bolivians even in those cases in which the law requires the persons to have been born in Bolivian territory.

ART. 32. Likewise are Bolivians:

1st. The sons of a Bolivian father or mother, born in a foreign country, by the simple fact of residing in Bolivia.

2nd. Foreigners who, having resided one year in the Republic, declare before the municipal authorities of the place where they live their desire to become Bolivians.

3rd. Foreigners who, as a concession, shall obtain letters of naturalization from the Chamber of Deputies.

SECTION FIFTH.—*Of citizenship.*

ART. 33. To be a citizen it is required:

1st. To be a Bolivian.

2nd. To be twenty-one years of age, if single, or eighteen, if married.

3rd. To be able to read and write, and to possess real estate, or an annual income of two hundred bolivianos (dollars), provided that the same is not compensation for services rendered as a domestic servant.

4th. To be inscribed in the national civil register.

ART. 34. The rights of citizenship consist:

1st. In concurring, as elector, or elected, in the formation or exercise of the public powers.

2nd. In being admitted to all public offices, with no other requisite than that of fitness, saving the exceptions established by this Constitution.

ART. 35. The rights of citizenship shall be forfeited:

1st. By naturalization in a foreign country.

2nd. By having been sentenced judicially by a competent tribunal to any form of corporal punishment, until again reinstated.

3rd. By fraudulent bankruptcy.

4th. By accepting employment, salary, or decorations from a foreign Government without special permission from the Senate.

ART. 36. The right of citizenship is suspended by being *sub judice* in virtue of a decree of impeachment, or by being distrained as debtor of public monies.

SECTION SIXTH.—*Of sovereignty.*

ART. 37. The sovereignty resides essentially in the nation; it is inalienable and imprescriptible, and its exercise is delegated to the legislative, executive, and judicial powers. The independence of these three powers is the basis of the Government.

ART. 38. The people do not deliberate or govern, except through their representatives and the authorities created by the Constitution. Any armed force or gathering of individuals who arrogate to themselves the rights of the people commit the crime of sedition.

SECTION SEVENTH.—*Of the legislative power.*

ART. 39. The legislative power resides in the National Congress, composed of two chambers, one of Deputies and another of Senators.

ART. 40. They shall meet in ordinary session every year in the capital of the Republic on the 6th day of August, although they have not been previously convoked; their session shall last sixty available days, which may be extended to ninety, if judged necessary, by the same Congress, or upon the request of the Executive power.

ART. 41. If, at any time, the Executive be of opinion that it is expedient, for grave reasons, that the ordinary Congress shall not meet in the capital of the Republic, it may issue a decree of convocation to any other place.

ART. 42. An extraordinary congress may be convoked by the concurrence of a majority of both houses, or by a decree of convocation of the Executive power, who, in such case, shall determine the place of meeting. In both cases, the Congress must occupy itself exclusively with the business designated in the decree of convocation.

ART. 43. The chambers shall meet with the presence at least of the majority of their respective members at the same time and in the same place, and one house shall not begin nor finish its sessions on a different day from the other.

ART. 44. Any Deputy or Senator may be elected President or Vice-President, of the Republic, minister of state, diplomatic agent, or military commander in time of war, being suspended in the exercise of his legislative functions during such time as he shall hold such office.

The Vice-Presidents shall not be suspended in their legislative functions, except when holding the Presidency or any of the aforesaid offices.

ART. 45. No Deputy or Senator shall accept appointments from the Government other than those named in the aforesaid article. The holders of civil, ecclesiatic, and military offices, whose appointment and removal depend exclusively on the Executive power can not be Deputies or Senators for any electoral district.

Neither can other paid employees be elected Deputies or Senators in the electoral district where they exercise jurisdiction or authority.

ART. 46. Deputies and Senators are inviolable at all times for the opinions expressed in the discharge of their duties.

ART. 47. No Deputy or Senator may be accused, pursued, or arrested from the day of his election until the end of his returning journey to his residence without the consent of the house to which he belongs, except when taken *in flagrante delicto* (*) for the perpetration of which he may be subjected to corporal punishment.

Neither can they be prosecuted in a civil cause during the period named in the above paragraph.

During their constitutional period of office they can address petitions or remonstrances to the Executive power for the fulfillment of the legislative laws and resolutions; they can also make known the needs and the desired means of improvement of their respective electoral districts.

ART. 48. The sessions of Congress and of both houses shall be public; they can not be held in secret unless two-thirds of its members agree thereto.

ART. 49. When the same citizen be elected Deputy and Senator at the same time he shall give preference to the seat of Senator.

ART. 50. If he be elected Deputy or Senator for two different districts or departments he shall be free to accept either.

ART. 51. The offices of Senator and Deputy can be resigned at will.

ART. 52. The functions of the legislative power are the following:

1st. To dictate laws, to cancel, modify or interpret them.

2nd. To impose taxes and contributions of any kind whatever, or to suppress, cancel, or modify the existing ones, and to determine, if necessary, their distribution among the departments and provinces.

* Which is punishable with imprisonment and hard labor.

3rd. To fix, in each legislative session, the expenses of the public administration.

4th. To fix, also, in each legislative session the permanent military force to be maintained in time of peace. The taxes and contributions are decreed for eighteen months only; the military force also for the same period.

5th. To authorize the Executive to contract loans and to provide the funds for the interest charged thereon, to recognize the debts contracted and to provide the means of paying them.

6th. To create new departments or provinces and designate their limits; to create first-class ports of entry and to establish custom-houses.

7th. To fix the weight, law, value, type, and denomination of the national coins; to authorize the issue and circulation of bank notes; and to regulate the system of weight and measures.

8th. To grant subsidies and guarantees of interests for the construction of rail-roads, canals, post-roads, and any other wayfaring enterprises.

9th. To permit the transit of foreign troops through the territory of the Republic, determining the length of their stay therein.

10th. To allow corps of the permanent army to reside in the place where the sessions of Congress are being held, and within a circumference of ten leagues thereof.

11th. To allow national troops to leave the territory of the Republic, fixing the time for their return.

12th. To create and cancel public offices determining or modifying their functions and fixing their salaries.

13th. To decree amnesties and to grant pardon to certain persons previously obtaining a satisfactory report from the Supreme Court of Justice.

14th. To approve or reject treaties or conventions of any kind.

Section Eighth—*Of the Congress.*

Art. 53. Each house shall certify the election of its respective members, and can expel them temporarily or permanently; can punish all infractions of its regulations; organize its secretaryships; name all the employés depending thereon; make its estimate of expenses or disbursements and order the payment thereof, and control everything relating to its internal policy and management.

Art. 54. Both houses shall meet in joint session in Congress in the following cases:

1st. To open and close its sessions.

2nd. To scrutinize and verify the ballot and acts of election for President and Vice-President of the Republic; to exercise the right of personal election when

Ministers of State, the judges of the Supreme Court of Justice, and the diplomatic agents.

2nd. To elect the magistrate of the Supreme Court of Justice from a list of three presented by the Senate.

SECTION TENTH.—*Of the Chamber of Senators.*

ART. 61. The Senate of the Republic shall be composed of two Senators for each department.

ART. 62. To be a Senator it is necessary:

1st. To be a Bolivian by birth or by naturalization, with five years' permanent residence in the country, and to be inscribed as a citizen in the national register.

2nd. To be thirty-five years of age.

3rd. To have an annual income of $800, whether from a profession, industry, or real property.

4th. Not to have been sentenced to corporal punishment (imprisonment) pronounced by the ordinary courts of justice.

5th. To have four years' uninterrupted residence in the Republic immediately before the election, unless such absence from the country was by reason of employment in the public service.

ART. 63. Senators shall hold their office for the term of six years, and can be reëlected indefinitely.

The Senate shall be renewed by a third of its members in the first two periods of two years; the third parts shall go out by drawing lots. (In the first Congress.)

ART. 64. The functions of the Chamber of Senators are the following:

1st. To hear the accusations made by the Chamber of Deputies against the functionaries named in Art. 60.

In such case, the Senate shall only decide whether the impeachment shall take place or not. If its decision be in the affirmative, then the Senate shall suspend the said functionary from office and place him at the disposition of the Supreme Court of Justice, to be tried in conformity with the law. The Senate can only try the magistrates of the Supreme Court of Justice and adjudge their responsibility, no matter whether the accusation proceeds from the Chamber of Deputies, from the complaint of the offended person, or from information of any citizen.

In the cases provided for in the two foregoing paragraphs, a two-thirds vote of the members present shall be necessary.

A special law shall regulate the course and formalities of these judgments.

2nd. To propose a list of three names for archbishop and bishops, to be presented to the Executive power for the respective canonic sees.

3rd. To propose lists of three names for magistrates of the Supreme Court of Justice, in order that the Chamber of Deputies may make the election.

4th. To reinstate, as Bolivians and as citizens, those who may have forfeited their rights.

5th. To allow Bolivian citizens to accept honors, employments, titles, or gifts from foreign governments, providing that these are not contrary to the laws of the Republic.

6th. To elect by secret ballot, from the lists of three proposed by the Executive, the generals and colonels of the army.

7th. To decree rewards and public honors to those who may merit them, for their services to the Republic.

SECTION ELEVENTH.—*Of the formation and promulgation of laws and resolutions of the legislative power.*

ART. 65. The laws may originate in the Senate or in the Chamber of Deputies, by bills presented by any of its members, or by special written messages addressed by the President of the Republic, on condition that such bill (presented by the latter) be sustained in the debates by at least one of the ministers of state, who shall not be present when the voting takes place. The cases provided for in Art. 59 are excepted.

ART. 66. A bill once passed in the Chamber where it originated shall pass immediately to the other for its consideration and approval in that legislative period (congressional session of that year).

ART. 67. Any bill that has been rejected in the Chamber where it originated can not be again proposed in either Chamber until the next session.

ART. 68. When one of the Chambers, revising a bill (passed by the other), rejects the same, the Chamber in which it originated may reconsider it, and if it insists on its approval, by a majority of two-thirds of its members present, the bill must be presented a second time to the other Chamber, and can not be again rejected unless by a majority of two-thirds of the members present; otherwise, the bill shall be considered as approved.

When the rejection is confirmed, or when the Chamber in which it originated does not insist on its approval, said bill can not again be presented during the legislative session of that year.

ART. 69. If the revising Chamber simply amends or modifies a bill, it shall be considered as approved, in case the Chamber in which it originated accepts by absolute majority the amendments or modifications made. But if it does not accept them, or if it again alters or modifies the bill, then the two houses shall

meet together to deliberate in a single debate, under the direction of the President of the Senate, upon the altered bill. In the event of approval, the said bill shall be sent to the Executive to be promulgated as a law of the Republic. But if it be rejected, it can not be presented anew, except at a subsequent legislative session.

ART. 70. All bills sanctioned by both Chambers may be vetoed by the President of the Republic within the term of ten days from that on which it was sent to him, but only on condition that pending its consideration, the minister to whose branch the bill belonged was not present.

Any bill not vetoed within said period must be promulgated, and, if within this term, Congress closes its sessions, the President may publish in the official gazette his message containing the reasons for his "veto," for consideration in the next meeting of the Chambers.

ART. 71. The alterations or modifications of such bill proposed by the Executive shall be addressed to the house where it originated, which, on meeting with the revising Chamber in joint session in Congress, if they find the same well founded and give their approval accordingly, the bill shall be returned to the Executive for promulgation.

If both Houses declare the observations (of the Executive) unfounded by a majority of two-thirds of the members present, it devolves upon the President of the Republic to promulgate such law.

If he refuses, the President of the Senate shall do so, in order to give effect to the law.

ART. 72. When the Chambers deliberate upon questions relating to any parliamentary decision of their own exclusive concern, the agreement of the Chambers relating thereto is sufficient without its promulgation by the Executive. In such case, this formality is performed by their respective presidents and secretaries. The procedure to be observed in these cases, for the regulation of the debates and the decisions concerning the relations between the house that initiates and the other that revises a parliamentary vote, shall be the same as those of any ordinary bill.

ART. 73. The Chambers can, by motion of their respective members, accord a vote of censure upon the acts of mere policy of the Executive, addressing the same against the ministers of state, either separately or collectively, as the case may be, with the sole object of obtaining a modification in the Executive's policy.

For the exercise of this faculty, the decision of the Chamber where it originated is sufficient by a simple majority vote of the members present.

ART. 74. The promulgation of the laws shall be made by the President of the Republic, in this form:

"Whereas the National Congress has sanctioned the following law": * * * "I hereby promulgate it, and order it to be kept and obeyed as a law of the Republic."

The parliamentary votes and resolutions shall be promulgated in the following form:

"The National Congress of the Republic decrees" * * *; "This decree shall therefore be executed in accordance with the Constitution."

SECTION TWELFTH.—*Of the Executive power.*

ART. 75. The Executive power shall be entrusted to a citizen, with the title of "President of the Republic," and can only be exercised through the medium of the minister secretaries of state in the several departments.

ART. 76. The constitutional period of the President of the Republic shall last four years, and the same person can not be reëlected until one intervening period has elapsed.

ART. 77. When, during the same period, the President of the Republic, either through resignation, inability, or death, can not perform the duties of that office, the first Vice-President, who was elected at the same time, and in accordance with the requirements of the corresponding section of this Constitution, shall then be called to discharge its functions until the termination of the constitutional period.

The first Vice-President shall also replace the President when the latter assumes the command of the army, in the event of civil or foreign war.

In the absence of the First Vice-President, and in all the cases mentioned in this article, the Second Vice-President who was elected in the same manner as the former, must take his place.

ART. 78. The Vice-Presidents can not be reëlected to such office nor to that of President if they have administered the executive power to complete the preceding constitutional period.

In the absence of the Vice-Presidents, the President of the Senate may act as such, and in case of his absence, the President of the Chamber of Deputies.

ART. 79. Only citizens who are qualified to be elected Senators, and who are, besides, Bolivians by birth, can be elected President or Vice-Presidents of the Republic. They shall receive the annual endowment which is legally assigned to them for their services, and which can not be increased nor diminished during their period of office, nor can they receive any other remuneration of any kind whatever.

ART. 80. At the time of undertaking the executive power, the President shall swear solemnly before Congress to discharge faithfully his duties, and to preserve and defend the Constitution of the Republic.

ART. 81. After the President, the Vice-Presidents shall take the same oath in the same manner.

While the First Vice-President does not discharge the executive power, he shall be President of the Senate, notwithstanding the Senate shall elect its own President in the absence of the former.

ART. 82. The salary of the Vice-President, when temporarily discharging the duties of President, shall be the same as that which is assigned to his own post, but if he enters upon the office of President in order to complete a constitutional period, he shall then have the same endowment as the President of the Republic.

ART. 83. The President and Vice-Presidents of the Republic shall be elected by direct suffrage and secret vote of all the citizens in exercise of their rights.

A special law regulates this election.

ART. 84. The President of the Congress, in the presence thereof, shall open the sealed papers containing the acts that have been sent by the several electoral districts. The secretaries, together with four other members of Congress, shall proceed immediately to the counting and computation of the votes in favor of each of the candidates.

Those who have the absolute majority of votes, that is to say, one more than the half of the total number of votes polled, shall be proclaimed President and Vice-Presidents of the Republic.

ART. 85. If none of the candidates for the Presidency or Vice-Presidencies of the Republic have obtained the absolute plurality of votes, then the Congress shall take the three candidates who have obtained the greater number and elect from among them (President and Vice-Presidents).

ART. 86. This election shall take place in a public and permanent session. If, after the first election made, none of the candidates have the absolute majority of votes of the members present, then a second election (ballot) shall take place in which the two candidates who obtained the greater number of votes in the preceding one shall only be voted for.

In the event that these two candidates receive an equal number of votes, the voting shall be repeated until one of them shall obtain the majority.

ART. 87. The counting of votes and the proclamation of President and Vice-Presidents of the Republic shall take place in a public session.

ART. 88. The election of President and Vice-Presidents of the Republic, made by the people and proclaimed by Congress, or made by the latter in accordance with the foregoing articles, shall be announced to the nation by a special law.

ART. 89. The functions of the President of the Republic are the following:

1st. To negotiate and conclude treaties with foreign nations, and to ratify and exchange them with the previous approval of Congress; to name consuls,

consular agents, and diplomatic ministers, to admit foreign functionaries of this class, and to conduct generally the foreign relations of the country.

2nd. To direct the operations of a war declared by a special law and to command in person the forces, observing the provisions of Art. 77. In time of peace, he has the command of the permanent army and of the national guard, in accordance with the laws that the Congress may dictate.

3rd. To aid in the formation of the laws by means of his direct suggestions in special messages, with the parliamentary intervention of the ministry, and to promulgate the said laws in accordance with this Constitution.

4th. To convoke Congress in extraordinary session, when urgent business may require it.

5th. To execute the laws and to enforce obedience thereto, issuing the necessary decrees and orders, without previously defining any rights, or altering those defined by the laws, or contradicting the dispositions of the laws, always observing the restrictions named in Art. 20.

6th. To look after the collection and administration of the national revenues and to decree their disbursement in accordance with the law, it being prohibited to make any disbursement without his written order, and the authorization of the minister of the corresponding department, with an express mention of the law that fixes the said disbursement.

7th. To present annually to the Congress, the estimate of the national expenditures for the ensuing year, and an account of the money disbursed in the preceding year, in conformity with the respective law of estimate.

8th. To keep vigilance over the municipal resolutions and especially over those relating to revenues and taxes, in order to lay an information before the Senate as to those that may be contrary to the Constitution and the laws, should the municipality which has transgressed fail to heed the remonstrances of the executive.

9th. To present annually to Congress in any of its first ordinary sessions a written message, containing a report relating to the course and state of the affairs of public administration during the year, accompanied by the special reports of the ministers of state as to their several departments. The President may further give, through the medium of the same ministers, information respecting any matter determined upon, which the Chamber may desire, reserving such details relating to diplomatic affairs, which, in his opinion, should not be published.

10th. To commute the penalty of death, in accordance with the law.

11th. To enforce the execution of sentences of the tribunals of justice.

12th. To decree amnesties for political offences without prejudice to those that the legislative power may grant.

13th. To grant pensions in conformity to the law.

14th. To exercise the rights of the national patronage in the church and over the benefices of curacies and ecclesiastical persons.

15th. To present archbishops and bishops for consecration, choosing one of the three proposed by the senate.

16th. To appoint canons, prebendaries, and other dignitaries from among those presented for nomination by the chapters of cathedrals.

17th. To grant or refuse, in accordance with the vote of the senate, the passage (enforcement) of the papal briefs, bulls, and rescripts.

If the same contains any general and permanent dispositions, a special law is required.

18th. To name the magistrates of the national court of exchequer, selecting them from the list of three presented by the senate, and who can not be dismissed from office except by virtue of a sentence pronounced by the supreme court of justice. (They hold office for six years and are eligible to reëlection upon the expiration of their said term of office.)

19th. To name all the employees of the Republic whose nomination or presentation is not reserved by the law to any other power.

20th. To give in the name of the nation titles (commissions) to all public functionaries, no matter by what authority or intervention they were proposed or appointed.

21st. To name provisionally, in the case of resignation or death, the functionaries who should be elected or proposed by any of the other powers.

22nd. To attend, in person, the sessions in which Congress opens and closes its labors.

23rd. To maintain and defend the interior peace and public order and the exterior security of the Republic in accordance with the constitution.

24th. To propose to the senate, in the case of vacancies, a list of three names for generals and colonels of the army, with a full report of their respective services and promotions.

25th. To confer in the name of the nation, and only on the battlefield, in time of foreign war, the promotions to the degree of colonel and general.

26th. To grant, according to law, special temporary privileges to those who invent, improve, or import systems or methods useful to science or art, and to indemnify (inventors) in the event of making public the secret of such invention, improvement, or importations (for the benefit of the public).

27th. To create and establish minor ports of entry.

ART. 90. The degree of captain-general of the army is inherent in the functions of President of the Republic.

SECTION THIRTEENTH.—*Of the ministers of state.*

ART. 91. The affairs of public administration are despatched by the ministers of state, whose number is designated by the law.

ART. 92. To be a minister of state the same qualifications are necessary as for a member of the Chamber of Deputies.

ART. 93. The cabinet ministers are responsible for their acts of administration of their respective branches in conjunction with the President of the Republic.

ART. 94. The responsibility of the ministers is collective for all acts resolved upon in cabinet council.

ART. 95. All the decrees and orders of the President of the Republic shall be signed by the ministers of the several departments, and shall not be obeyed without this requisite.

For the appointment or removal of the ministers, the signature of the President is sufficient.

ART. 96. The cabinet ministers may be present and take part in the debates of either of the houses of Congress, but they must retire before the voting takes place.

ART. 97. As soon as Congress opens its sessions, the ministers shall present thereto, in the form expressed in Art. 89–9, their reports relating to their respective departments.

ART. 98. The account of the disbursement of the public revenues, which the minister of finance must present, shall be considered as having been examined and approved by the other ministers in their respective departments. The said account must be submitted to Congress with the report of the national court of exchequer. At the making up or formation of the national budget, there shall be present (in Congress) all the ministers of the several departments.

ART. 99. The written or verbal order of the President of the Republic shall not excuse a minister from his personal responsibility.

ART. 100. For private delinquencies committed thereby, they (the ministers) may be accused (prosecuted) before the supreme court of justice by the person injured, and judgment shall be awarded in conformity with the law.

SECTION FOURTEENTH.—*Of the internal administration.*

ART. 101. The superior, political, administrative, and economic government of each department of the territory of the Republic resides in a magistrate with the denomination of prefect, depending on the executive power, and whose immediate agent he is, and with whom he shall communicate through the medium of the respective cabinet minister. In these branches, and in all that concerns the peace and security of the department, all public functionaries of whatever

class or denomination, residing within the territory of the department, shall be subordinate to the prefect.

ART. 102. To be a prefect it is necessary—

1st. To be a Bolivian by birth or naturalization, with five years' permanent residence in the country, and to be in the exercise of the rights of a citizen.

2nd. To be at least thirty years of age.

ART. 103. The government of each province resides in a sub-prefect, subordinate to the prefect. The sub-prefects are named by the President of the Republic.

ART. 104. In each canton (district) there shall be a "corregidor" (country justice) as an immediate agent of the subprefect. His nomination shall be made by the prefect upon the recommendation of the subprefect. In the country districts there shall be "alcaldes" (inferior country justices), appointed by the subprefect.

ART. 105. The prefects and sub-prefects shall exercise their functions during the constitutional period of four years. They can be removed by the President of the Republic for causes that gravely affect the good service of their administration or that endanger the public peace.

The minister of the interior shall inform the Congress of such dismissals and their causes.

The corregidores and alcaldes of the country districts shall remain in office for one year, and can not be reëlected until after the interim of another year.

ART. 106. To be a subprefect or corregidor it is necessary to be a Bolivian in the exercise of citizenship.

ART. 107. A special law shall determine the jurisdiction of the functionaries provided for in this section.

SECTION FIFTEENTH.—*Of the judicial power.*

ART. 108. Justice shall be administered by the supreme court, by the district courts, and by the other tribunals and courts of justice established by law.

ART. 109. The administration of justice is free on the part of the functionaries who exercise jurisdiction and receive salaries.

ART. 110. The supreme court of justice is composed of seven magistrates, whose election shall be made by the Chamber of Deputies, from a list of three, presented by the senate.

To be a magistrate of the supreme court of justice it is required:

1st. To be a Bolivian by birth or naturalization, with five years' permanent residence in the country, and to be at least forty years of age.

2nd. To have been magistrate in any of the superior district courts, or district attorney for five years, or to have practised with honorable distinction during ten years the profession of a lawyer.

3rd. Never to have been condemned to imprisonment or hard labor by virtue of an executory sentence of an ordinary tribunal.

ART. 111. The jurisdiction of the Supreme Court of Justice, besides that specified in the law, are the following:

1st. To examine appeals, in accordance with the law, and to decide at the same time the principal questions at issue.

2nd. To have the exclusive right to examine and decide all controversies or pure legal rights, whose decision depends on the constitutionality of the laws, decrees, or any kind of resolutions.

3rd. To examine and decide all cases in which the Constitution attributes to it exclusive jurisdiction.

4th. To examine and decide all causes involving the responsibility of the diplomatic and consular agents, of the national commissaries, of the magistrates of the superior courts, district attorneys, magistrates of the court of exchequer, and prefects for offences committed in the discharge of their duties.

5th. To examine and decide causes and contentions involving the contracts, negotiations, and concessions of the Executive Power, and suits and contentions that may arise from the resolutions of the said Executive Power.

6th. To examine and decide all controversial questions relating to the exercise of the national patronage by the Supreme Government of the Republic.

7th. To settle the controversies arising between the municipal councils, and between these and the political authorities, and between either or both of these authorities and the provincial municipal boards.

ART. 112. The Supreme Court at its first session, and after having taken the oath before Congress of obedience to the Constitution and the laws, shall elect its own president, who shall also be president of all its chambers, and shall hold that post for ten years, with the right of being re-elected.

When Congress meets at any other place than the capital of the Republic, a commission shall be given to the members of the Cathedral Chapter to take the oath of the magistrates of the Supreme Court, the ceremony taking place in the Session Hall of Congress in the Capital of the Republic.

ART. 113. The president of the Supreme Court shall watch over the upright and lawful administration of justice throughout the Republic, addressing to all the magistrates such observations, admonitions, or "writs that justice may be administered," that may be necessary, according to the advice of the court, or by suggesting to the Attorney-General the necessity of his making the corresponding accusations by such petitions (proceedings) as the Constitution and laws permit.

ART. 114. The Attorney-General shall be named by the President of the Republic, from a list of three persons presented by the Chamber of Deputies. The term of office of Attorney-General shall last for a period of ten years, and

he may be re-elected. He can not be dismissed except by virtue of a condemnatory sentence pronounced by the Supreme Court.

ART. 115. The magistrates of the district courts shall be elected by the Senate from a list of three names presented by the Supreme Court of Justice.

ART. 116. The district courts, in addition to the jurisdiction conferred upon them by the law, may give judgement against the officials of the municipalities, either individually or collectively, for offences committed in the exercise of their duties. The sub-prefects shall be submitted to the same jurisdiction.

ART. 117. The petty judges shall be elected by the Supreme Court from a list of three persons presented by the district court.

ART. 118. The district and petty attorneys and the fiscal agents shall be appointed by the President of the Republic from a list of three names presented by the Attorney-General.

ART. 119. The magistrates of the Supreme Court of Justice shall exercise their functions for a period of ten years; those of the district court, six years, and the petty judges four years. Their re-election is allowed after the expiration of the aforesaid period.

No magistrate or judge can be dismissed from office unless by an executory sentence against him; neither can he be suspended in the exercise of his functions except in the cases determined by law. He can only be transferred from one district to another in the case of his free will to do so.

ART. 120. Publicity is the essential condition of all legal procedure for the administration of justice, except in such cases as would offend public morals.

ART. 121. The public ministry is exercised in the name of the nation by the commissions designated by the Chamber of Deputies, by the Attorney-General, and by the other functionaries to whom the law attributes such ministry.

ART. 122. The tribunals, under their responsibility, shall not give possession of their offices to the magistrates or judges who have not been elected in accordance with the requirements of this Constitution.

ART. 123. The secretaries and other subordinates of the judicial power shall be named by the district courts from the list of three proposed by the judges under whom they have to serve. The Supreme Court shall name those belonging thereto.

SECTION SIXTEENTH.—*Of the Municipal Power.*

ART. 124. In the capitals of departments, there shall be municipal councils. In the provinces, the same as in their sectional divisions, and in each port, there shall be municipal boards, whose number shall be determined by law. In the cantons, there shall be municipal agents, depending on the municipal boards, and these on the municipal councils.

ART. 125. The regulative law shall determine the number of members in each locality of the municipalities, their election, the conditions required to hold such office, the duration of the term of office, and the means and manner of discharging their duties.

ART. 126. The duties of the municipalities are:

1st. To promote and watch over the public works of their district.

2nd. To establish or suppress municipal taxes, with the previous approval of the senate.

3rd. To create and direct establishments of public (primary) instruction, administer their funds, dictate their regulations, name the preceptors, and assign to them salaries. In the establishments (of primary instruction), belonging to the State, the municipality shall only have the rights of inspection and vigilance.

4th. To establish police boards of public health, comfort, ornament, and recreation.

5th. To look after the charitable institutions in conformity to their respective regulations.

6th. To prepare the census of the actual population and property of their municipal districts.

7th. To prepare the departmental statistics.

8th. To make the distribution of men for the army assigned to their territory in accordance with the law of conscription.

9th. To demand the public force necessary for enforcing obedience to their resolutions.

10. To collect, administer, and expend their own revenues.

11th. To accept legacies or donations, and to negotiate loans for promoting works of charity or public utility.

12th. To watch over the public sale of provisions, having as a basis the principle of free commerce.

13th. To name juries for the trial of offences of the public press.

14th. To name the parish alcaldes from a list of three names presented by the local judges; also their secretary and treasurer, the municipal agent for the canton districts, and all the employees of their dependencies.

ART. 127. The municipal councils can execute among themselves contracts and arrangements, with the object of promoting and carrying into effect public highway enterprises that embrace two or more departments, providing that the combination be based on disbursements by the municipal treasuries of the departments which the enterprise concerns.

SECTION SEVENTEENTH.—*Of the public force.*

ART. 128. In the Republic, there shall be a permanent armed forced, composed of the national army, the strength of which shall be determined by each legislative session fixing the number absolutely necessary.

ART. 129. The armed force must essentially be obedient; in no case, can it hesitate or deliberate; it is, in every respect, subject to the regulations and military ordinances in all that relates to the service.

ART. 130. There shall also be national body guards in each department; their organization and duties shall be determined by law.

ART. 131. Those who are not Bolivians by birth or naturalization, with five years' permanent residence in the country, can not be employed in the army in the position of generals or commanding officer, except by special consent of Congress.

SECTION EIGHTEENTH.—*Of the reforms of the constitution.*

ART. 132. This constitution can be reformed, in whole or in parts, by previously declaring the necessity for such reformation, and determining it with precision by an ordinary bill, which must be approved by a majority of two-thirds of the members present in each house. This bill can be presented in either or the chambers in the constitutional form.

The law declaratory of the reform shall be passed to the Executive for promulgation.

ART. 133. In the first sessions of the legislature in which the members of the Chamber of Deputies have been renewed, the reform shall be considered by the chamber that first proposed it, and if this be approved as necessary by two-thirds of the members present, it shall then be passed to the other chamber for revision, which also requires a two-thirds vote.

The procedure then shall be the same as the constitution prescribes for governing the relations between the two chambers.

ART. 134. The chambers shall consider and vote the reform, adjusting it to the constitutional dispositions determined in the bill authorizing the same.

The reform, once sanctioned, shall pass to the Executive for promulgation, and can not be vetoed by the President of the Republic.

ART. 135. When the modifications relate to the constitutional term of office of the President of the Republic, they shall be considered, in accordance with the disposition of the preceding articles, only in the next constitutional period.

ART. 136. The chambers can resolve any doubt that may occur with regard to the interpretation of any of the articles of this constitution, if such interpre-

tation is declared well founded by a two-thirds vote, observing in all else the formalities prescribed for an ordinary bill.

ART. 137. The colonies can be subjected to special laws and regulations.

ART. 138. The authorities and tribunals shall obey this constitution in preference to other laws, and the latter in preference to any other resolutions.

ART. 139. Laws and decrees contrary to this constitution are henceforth abrogated.

Given at the Hall of Sessions, in La Paz, the seventeenth of October, eighteen hundred and eighty.

TEMPORARY ARTICLES.

NOTE.—Five additional articles were adopted at the same time, intended to meet certain possible contingencies of the then pending war with Chile, but which are not now recognized as a part of the constitution in force in the Republic.

Appendix C.

IMPORT DUTIES OF BOLIVIA.*

In the preparation of these tables the official classification of the Bolivian tariff has been followed, which differs materially from that of the United States.†

Except in a few cases, the customs duties of Bolivia are assessed upon an official valuation of each article of merchandise imported, such valuation being declared annually by a decree of the Executive, usually upon the first of January.

The valuations expressed in English are calculated on the basis of the official valuation of foreign coins issued by the Director of the Mint of the United States, October 1, 1891, in which the Boliviano, or dollar, of 100 centésimos is valued at 72.3 cents United States currency.

EQUIVALENTS.

1 kilogram.....	=	2.2046	pounds.
1 centimeter.....	=	.3937	inch.
1 meter.....	=	39.37	inches.
1 square meter	=	1.196	square yards.
1 gram.....	=	15.4323	grains.
1 liter..	=	1.0567	quarts.
1 millar.....	=	2,204.6	pounds.
1 quintal	=	220.46	pounds.

There is a surcharge of .25 per cent on the rates here given. which the executive may increase to 50 per cent and may be varied as to the custom-house to be affected. Importations at Beni, San Matias, and Puerto Suarez are exempt from the additional charge.

* Corrected to January 1, 1891.

† There is no reciprocity agreement between the United States and Bolivia.

ARTÍCULOS LIBRES EN EL PRESENTE ARANCEL.

A. Afrecho, animales vivos, avisos impresos y calendarios comerciales, azogue, acero bruto, id. en planchas, aisladores para telégrafos, anclas y anclotes, aparatos eléctricos, arados, aparatos mecánicos para levantar pesos, azadas y sus repuestos, azadones, avena.

Bromuro—Continúa.		
de etilo	kilo..	4.00
de estaño	kilo..	20.00
de fierro	kilo..	5.00
de mercurio	kilo..	7.00
de oro	kilo..	1,000.00
de plata	kilo..	60.00
de plomo	kilo..	6.00
de potasa	kilo..	1.50
de litio	kilo..	14.00
de soda	kilo..	2.00
de zinc	kilo..	4.00
Bujías—		
Reinald, en cajas de lata, incluso envase	kilo..	10.00
Cadmio—		
metálico y sus composiciones	kilo..	5.00
Cafeina—		
alcaloide	kilo..	30.00
Cajas—		
de lata, para soda, purgante y refrescante, incluso envase	kilo..	.60
las mismas, de cartón	grueza.	2.50
Cajitas—		
de cartón, ordinarias, hasta 30 gramos de capacidad	grueza..	.40
como las anteriores, hasta 125 gramos de capacidad	grueza..	1.25
las mismas, hasta 250 gramos de capacidad	grueza..	2.00
de cartón, las clases semifina y fina, hasta 30 gramos de capacidad,	grueza..	.80
las mismas, hasta 125 gramos de id	grueza..	1.75
las mismas, hasta 250 gramos de id	grueza..	3.00
de cartón, con filete de color, hasta 30 gramos de capacidad	grueza..	1.60
las mismas, hasta 125 gramos de id	grueza..	2.50
las mismas, hasta 250 gramos de id	grueza..	5.00
de cartón, con filete dorado, fino, hasta 30 gramos de capacidad	kilo..	3.00
las mismas, hasta 125 gramos de id	kilo..	5.50
las mismas, hasta 250 gramos de id	kilo..	10.00
de madera de boj, con pote de porcelana, finas, hasta 30 gramos de capacidad	docena..	1.25
las mismas, de 31 á 60 gramos de id	docena..	2.50
las mismas, de 61 á 100 gramos de id	docena..	5.00
de madera blanca, torneadas, ordinarias, hasta 60 gramos de capacidad,	grueza..	.60
de madera, finas, barnizadas, hasta 60 gramos de capacidad	grueza..	6.00
de viruta, para ungüentos, incluso envase	kilo..	.60
Cal—		
cloruro seco, en barriles ú otros envases, peso bruto	kilo..	.30
sódica	kilo..	.50
carbonato ó creta precipitada	kilo..	.50
preparada	kilo..	.25
fosfato natural (ojos de cangrejo)	kilo..	.60
id. precipitado gelatinoso	kilo..	1.40
hipofósfito	kilo..	4.00
lactato	kilo..	3.00

Appendix D.

MINING LAWS OF BOLIVIA.

The mining laws of Bolivia consist of the *Ley de minería* (Mining Law) promulgated on the 13th of October, 1880, and the *Reglamento de la ley de minería* (Rules for the application of the Mining Law) made on the 28th of October, 1882.

The provisions of the *Ley de minería* are simple and wise. They are contained in no more than twenty-seven articles and leave little room for casuistics or embarrassing technicalities:

The full text of the law is as follows:

MINING LAW.

TITLE I.—*Ownership of the mines.*

ARTICLE 1. All kind of metalliferous substances of whatever origin and however laid on the ground, whether on the surface, or beneath the same, in any manner or form, belong originally to the State.

ART. 2. For the purposes of this law, the soil and the subsoil are two things altogether different.

Soil is the exterior coat, or surface, extending downwards only to such depth as may be reached by the work of the owner, either when engaged in agricultural pursuits or when paving or making foundations, or doing any other labor whatsoever different from mining.

Subsoil is all that lies beneath that coat and extends downward indefinitely.

ART. 3. The ownership of the soil, whether belonging to private individuals or to the State, is never impaired or jeopardized, except upon proceedings of condemnation, and the owner can at all times use it or take advantage of its products. But the ownership of the subsoil, which is under the control of the State, may, according to circumstances, and under no other rules than the dictates of advisability or profitableness, be either abandoned by the State, so as to allow said subsoil to become common property, or ceded or conveyed by the same State

to the owner of the soil, or granted by a regular concession in the form of a patent, also by the State and subject to the provisions of the present law, to a third applicant.

ART. 4. Mines are real estate and constitute a property different and independent from the land in which they are situated, even if their owner and the owner of the land are one and the same person. The ownership, possession, use, and enjoyment of a mine can be transferred or conveyed exactly in the same way as the ownership, possession, use, and enjoyment of all other property, subject, however, to the provisions of this law.

ART. 5. Mines do not admit of actual material division, but the capital which represents their value may be divided into shares.

TITLE II.—*Searching and testing.*

ART. 6. Searching and testing is allowed, without previous permission from the authorities, on lands belonging to the public domain, and also on private land when not fenced. In both cases excavations and test works may be made.

When the lands belong to private parties and are fenced, no searchings or excavations can be made, except with the consent of the owner or by judicial authority, granted upon indemnification.

Searchings and excavations are forbidden in grounds improved by buildings and in public or private gardens.

TITLE III.—*Concessions and mining properties.*

ART. 7. All persons who are in possession of their civil rights can obtain, through only one individual concession, one or more mining properties in mineral lands already known, and no more than thirty in lands where mineral wealth has been recently discovered. The mining properties which are the object of one concession shall be contiguous and have no vacant spaces between them, so as to show that the limits of one coincide exactly with the limits of the others which are adjacent on any side.

ART. 8. Priority in the filing of the petition to obtain the grant shall give preferential right.

ART. 9. When between two or more tracts granted by different concessions a vacant space happens to be found not large enough to constitute by itself one mining property, then the said space shall be granted to the owner of any of the adjacent mines who first asks for it, and, upon his renunciation, to any outside applicant.

ART. 10. If the application has for its object the construction of galleries for general investigation, or for draining, or transportation purposes, the applicant

shall be granted the mining properties he may ask for, exactly as in all other cases, if vacant ground to do so is found in existence; but, if such works are to be made across mining properties already granted, the applicant shall have to enter into an agreement with the respective owners and arrange with them upon the proper terms and conditions for the payment of any valuable ores which may be actually found.

If the owners of the mining properties object to the excavating of these galleries, they will not be made, except upon proceedings of condemnation.

ART. 11. The unit to be used for these concessions, that is, an individual mining property, is a prismatic figure, having for its basis a square one hundred meters on each side, horizontally measured, and of indefinite depth.

ART. 12. Sands which carry gold or tin, and all other metallic productions to be found in rivers or placer mines or in veneros, aventaderos, rebosaderos, or reventazones, in vacant lands, whether belonging to the State or to private individuals, shall be subject to concession and adjudication in the same way and with the same formalities as all other mines.

ART. 13. The tailings, rewashings, and slag and refuse heaps of abandoned mines and smelting establishments which may be found on uninclosed or unfenced grounds shall be granted to whomever first shows his desire to work them; but they shall be considered vacant if no work on them has been done for six months.

ART. 14. After the concession is made, even if no ore has been found or no work of any kind has been done, and upon no more evidence than that necessary to show that the ground is free, the demarcation or survey of the mining property shall be in order.

This demarcation may embrace all kind of grounds, buildings, roads, etc., and the mining labors must be made according to the police and safety regulations.

The starting point for each property shall be marked either outside or inside the same property, according to the location of the metalliferous deposits and with a view to secure the best possible identification.

TITLE IV.—*Working of the mines and forfeiture of the concessions.*

ART. 15. The miners shall work their mines with entire freedom, without being subject to follow in any way whatever any kind of technical rules or processes, but paying, however, due attention to the laws and regulations in force, the compliance with which shall be closely watched by the authorities.

ART. 16. The concessions of mines are made in perpetuity, but the grantees shall have to pay a patent of five *bolivianos* per hectare.

For the hills of Potosí, Machacamarca, and others where actual work is now being done and where the mining properties can not be constituted according to

Article 11 of this law, because of the fact that some properties there are to be located one upon another, the cost of the patent shall be four *bolivianos* for each mine opening or mouth, whether it is the mouth of a *socavón*, or subterraneous passage driven from the skirt of the hill, or of a *barreno*, or hole bored in the rock, or any other mine opening. No other mouths are exempted from the payment herein provided for except those which are plainly and exclusively destined to allow the passage of light for other labors.

The cost of the patent for the mining properties referred to in Article 12 of the present law shall be two *bolivianos*. Nothing will be paid for patents in the cases referred to in Article 13 of the present law.

ART. 17. These patent fees shall be paid semiannually and in advance, and shall be due from the date of the concession. All mining properties shall be deemed to be abandoned if the amount of patent fees due for one year is not paid within fifteen days after the miner is required to do so under proceedings of execution.

ART. 18. Upon the failure to pay the patent fees the mine shall be sold at auction and granted to the highest bidder, on condition that he shall continue to pay said fees. Out of the proceeds of the sale such a sum shall be taken as is required to pay the amount of patent fees due to the Treasury, the expenses incurred, and an additional 10 per cent. The balance shall be given to the delinquent ex-owner.

ART. 19. If no bidder makes his appearance on the appointed day the sale shall be postponed; but if the same thing happens on the new day assigned for that purpose, the ground shall be declared vacant and free.

ART. 20. Miners who desire to abandon their mines may report their intention to the proper authorities, and from that day forward they shall be exempted from paying the patent fees.

TITLE V.—*Rights and duties of the miners.*

ART. 21. Every miner is bound to allow the neighboring mines to be ventilated, and is also subject to an easement consisting in suffering the waters from the said mines to pass naturally through his property to the general outlet. He is bound, moreover, to comply with all the police regulations which may be made and provided.

In all these cases of easement, proper valuation and indemnification of the harm done is to be previously made.

ART. 22. The owners of a mine shall indemnify, either upon agreement or according to appraisement made by experts under the general provisions of laws, for all damages caused by them to other mines by waters accumulated in their own

works, when, although required by the injured party to make the proper drainage, they failed to do so. They shall also be bound to pay damages sustained through any other cause which results in detriment or injury to the property of others inside or outside the mines.

ART. 23. Miners are free to enter into such agreements as may be proper with the owners of the soil in regard to the area they need for dwellings, storehouses, shops, offices, etc. If no agreement can be reached by them, either in regard to the extent of the area or to the price to be paid, the miner shall be entitled to secure the acquisition of the said property upon proceedings of condemnation.

ART. 24. Such roads as have been made for the service of one mine shall be used by all others located in the same mineral district. But the expenses of preservation and repair shall be defrayed *pro rata* of the use made of said roads.

ART. 25. The ownership of the waters which may be found in their works belongs to the miners.

ART. 26. They are also the owners, within the limits of their mining properties and in the whole depth of the same, of all the veins and metallic deposits which they may find. But they are forbidden to work or benefit said veins or deposits by trespassing on properties belonging to others.

ART. 27. Trespassers are bound to make restitution of the value of the ore obtained by them in this way, as appraised by experts. If convicted of having acted in bad faith, they shall be deemed guilty of larceny.

Bad faith is presumed when the trespass exceeds ten meters.

TRANSITORY PROVISIONS.

ART. 28. The present owners of mines may build their mining properties in the form provided by this law without prejudice to the rights acquired by third parties.

ART. 29. The concessions made under the former legislation shall become perpetual, and enjoy all other privileges granted by the present law, as soon as the patent fees herein established commence to be paid.

ART. 30. All questions in trespass, easements, etc., arising between old mines which have not built their properties in accordance with the present law shall be tried and adjusted according to the laws in force at that time.

ART. 31. Miners are subject to the courts of ordinary jurisdiction, and mining companies shall be established and governed according to the provisions of the code of commerce.

ART. 32. No execution can be made on mining and metallurgic interests; but the creditors may cause receivers to be appointed.

ART. 33. Mines of precious stones shall be subject to the provisions of the present law until especial regulations regarding them are made and promulgated. Article 17 of the decree of January 8, 1872, is hereby repealed.

ART. 34. The decree of December 31, 1872, relative to inorganic matters, is left in force, but the concessions which it makes are reduced one-half and its Article 27 is repealed.

ART. 35. The executive shall make rules providing for the manner and form in which the applications are to be made, the form of the concessions, and how the surveys of the mining properties must be made. It also shall make police regulations applicable to the mining industry. All these rules shall be enacted upon consideration of such drafts or projects for the same as shall be framed by three mining committees simultaneously sitting at Sucre, Potosí, and Oruro.

ART. 36. The present law shall be in force as soon as the executive promulgates the rules to which the preceding article refers.

ART. 37. The decree of July 23, 1852, relative to stakes (or pits of a certain depth) for the benefit of public instruction, is hereby repealed.

The Rules for the application of the foregoing Mining Law of Bolivia form a code of seventy-five articles, which may be condensed, as follows:

I. *Rules relative to the "cateo" or preliminary testing excavations.*—These excavations, or *calicatas*, which must not exceed 10 meters in length or depth, may be undertaken by all persons capable of contracting valid obligations.

If made in lands belonging to the State no license nor any other requisite whatever is necessary; but previous notice must be given to the local authority.

If made in lands belonging to private parties, the permission of the owner should be first obtained; but, if he refuses it, the *cateador* may apply to the district court for a special permission; and the court may grant or refuse it, according to circumstances.

The application must be in writing, and shall set forth in precise terms, besides the names, occupation, and places of residence of both the applicant and the landowner, what are the purposes of the *cateo*, and specify particularly the place in which it is proposed to be made.

Upon the filing of this application the court shall appoint a day in which both parties shall be heard and the case decided. But on petition of any of the parties, or merely on its own motion,

the court may direct an investigation to be made at the locality, either by the official engineer, or, if there be none, by an expert appointed by the court itself, and suspend its decision until receiving his report.

The decision shall then be rendered without further discussion and shall be final in all cases.

A record shall be made and entered in a book specially kept for this purpose, which shall remain in the custody of the court, accurately setting forth all that transpired in the case.

The landowner may cause the *cateador* to give bonds to secure the payment of the indemnification due him for damage arising out of the *cateo*, if allowed. Application to that effect may be made at the hearing of the case, and the court shall grant it, either in general terms, by holding the *cateador* responsible for these damages, or, if so requested by the landowner, by fixing the amount and ordering its previous payment. The determination of this amount shall be made upon a hearing of the two parties, or, if necessary in the judgment of the court, upon professional or expert examination and report.

The decision of the court shall fix the time during which the excavations may be made. This time shall never exceed thirty days, to be counted from the date of the decision.

If no work has been done during this period, or if the works prove to be fruitless, no license can be given the *cateador* for a second attempt on the same ground.

II. *Rules concerning the mining properties, their concession, survey, possession, and registry.*—Persons desiring to obtain one or more mining properties shall file an application to that effect before the highest executive officer of the department, called the *prefecto*, stating their names, occupations, and places of residence, the name to be given to the property where concession is asked, the number of *pertenencias* or mining properties which are desired, the exact point, either inside or outside the ground, as the case may

be, from which the surveys have to start, fixing it as far as possible with relation to some other point the location of which admits of no doubt, the mineral district to which the new mines belong, expressing whether said district is already known as a mining district or whether it is new in this respect, the names of the adjoining mines if any, how the new mines are to be located in relation to them, and the name of the landowner, should the ground belong to private parties.

For the purposes of the law, mineral districts shall be considered to be known as such when one mine at least is actually worked at the time of the application or was formally worked before, or when two or more petitions for registries within their limits have been filed by different persons.

As soon as the application is filed, a record shall be made at the foot thereof of the exact time, hour and minute, in which it was received. This note or memorandum shall be signed in the presence of the applicant by the *prefecto* and his secretary. If the applicant wishes to file his petition in duplicate, he has the right to do so, and in that case the record above mentioned shall be made on both copies, one of which shall be left in the office and the other returned to the applicant for his own use.

The secretary of the *prefecto* is directed to keep a book called "book of petitions for mining properties," in which he shall enter in strict chronological order the applications of this kind which he has received. Each application shall be made the subject of a different item, and each item shall have its number and shall be signed by the secretary.

Applicants have the right to examine this book whenever its contents may affect their applications.

The *prefecto* shall order the concession to be made in favor of the applicant, under article 7 of the law—that is, no more than 30 *pertenencias* in new mineral districts and 1 or more in the old ones, these *pertenencias* to be contiguous—and shall cause his order

to be made known to the neighboring miners and also published in the newspapers or otherwise.

The object of this publication is to afford an opportunity to any interested party to come and oppose the final carrying out of the concession, and for this purpose a period of at least thirty days is granted.

The opposition, if any, must be founded either on a preferential right growing out of priority in the filing of an application for the same grant, or on the allegation that there is no vacant or unoccupied ground wherein the new mining properties could be located. No other grounds shall be allowed.

Should such opposition be made within the period marked by law, the *prefecto* shall refer the whole matter to the district court, where the case shall be tried under the regular proceedings of law followed in all ordinary suits.

If the decision is adverse to the opponent, or if no opposition is made, the next step to be taken after the order of the *prefecto*, consists in the survey, which shall be made by order of the authority and upon notice given to the neighboring miners and to the owner of the ground.

The petition for the survey shall be filed at the latest within sixty days after the date on which the order of the *prefecto* granting the concession became final. Otherwise the petition shall be considered as abandoned and the concession shall be canceled.

The *prefecto* shall order the survey to be made, as above stated, and shall name the engineer or expert by whom it is to be made, and also the subordinate officer who must represent his authority at the time of its being made.

The next thing shall be to give possession of the surveyed mining properties to the persons in whose favor they were granted, and this shall be done on the spot by the same officer who attended the operations of the survey, with the usual formalities. A full record of all the proceedings shall be made and preserved.

The engineers or experts who surveyed the *pertenencias* are bound to draw in duplicate a plat of the same, to which they and the attending executive officer shall affix their signatures. One copy shall be given to the interested party and the other shall be preserved in the *prefecto's* office.

The mining notaries for each district shall keep a book, or registry, in which they will enter each concession. The entry shall be a complete copy of the whole record of the case, from the application filed before the *prefecto* to the record of the act of possession. A copy of this entry shall constitute full evidence of the ownership of the mine.

Every volume of the registry shall be closed on the 31st of December each year, and a new book shall be started on the 1st of January. Several formalities are required to prevent this book from being tampered with in any way whatever and to secure its authenticity.

III. *Rules relative to the condemnation of private property for mining purposes, the constitution or establishment of easements in favor of the mining industry, and the mining police.*—Mines and mining business are always presumed to be matters of general utility and enjoy all the privileges of public works, among them the important right of securing, through proceedings of condemnation, the acquisition of whatever private property may be required for their success, if no agreement can be reached with the owners.

The very nature of the mines and the mining industry has been the cause of several easements, in some cases of peculiar importance. Particularly noticeable among them are the three following, to wit:

1. The easement of *ventilation*, under which every miner is bound to allow the air to pass through his mine to the neighboring ones, when necessary. This service is to be rendered gratuitously, and if any question should happen to arise out of the exercise of this right between the respective owners, it shall be speedily

settled by the local authority, upon examination by experts if necessary.

2. The easement of *drainage*, under which every miner is bound to allow the waters naturally flowing toward his mine from the neighboring ones to pass through it on their way to the common outlet. The exercise of this right is subject to several regulations which insure its equitable and reasonable enforcement, and implies in all cases the necessity of paying the proper indemnification to the injured party if any damage is done to his property.

3. The easement of *passage* under which every miner is bound under certain circumstances to allow his neighbors to enter their mines through the one belonging to him.

Miners are bound to comply with certain rules of police, which are conducive either to the common safety or to the better success of the mining industry. They are bound to have their mines properly ventilated and lighted. No work is allowed to be done in darkness. Waters must not be allowed to remain deposited, and ditches and gutters are to be made to carry them outside. The heaps and deposits of material extracted from the mines must be arranged in such way as to prevent any injury, either to the persons or to the property from being sustained in the mines to which the material belongs, or in the neighboring ones. Accidents must be immediately reported to the legal authority, and the local authority has the right to see that no accident happens through neglect or disregard of the mining regulations in force.

Actions intended to secure indemnification for damages, of whatever origin, are to be brought before the civil courts against the owner of the mine, whether an individual, a corporation, or a company.

Criminal actions intended to secure punishment for some offense are to be brought directly against the offenders.

The whole subject of mines in Bolivia has been placed in charge of the Secretary of Industry. Under him and subject to

his authority jurisdiction in mining matters is exercised respectively by the *prefectos*, or heads of the departments, and the *intendentes* and *subprefectos* in the provinces. There are also certain engineers appointed by the Government and called *ingenieros fiscales*, by whom all official engineering work is to be done.

Appendix E.

PATENT LAW OF BOLIVIA.

The present Bolivian patent law, promulgated on May 8, 1858, provides that letters patent will be granted to every inventor of new and useful improvements, or for methods or means discovered for the improvement of any manufacture or industry; but patents will not be granted for inventions on mere modifications in preparation, or for objects of adornment, secret remedies, or inventions contrary to the laws or good morals. The term for which patents are granted is not less than ten nor more than fifteen years. In case an invention, though old in some countries, shall be new in Bolivia, and shall be imported into that country, an exclusive patent may be granted to the first importer. If the establishment of the machinery or imported industry necessitates the expenditure of $25,000, the patent to the importer will be granted for three years; if it reach $50,000, for six years; and if $100,000 or more, for ten years. The application for a patent should consist of a petition; description explaining the invention or improvement; two copies of the drawing, and a sample of the article, improvement, or product, or perfected invention. In case of an application for a patent of importation, the importer should accompany his petition with designs or models of the machine, with a detailed specification of its principles and methods of working. In case it is desired to make any alterations in the invention or in the petition, a declaration in writing, accompanied by a description of the new method, should be filed. In case a patent is to be assigned in whole or in part, the assignment should be a public instrument. In the case of a dispute of date between two applicants for a patent for the same invention, the patent will be granted to the prior applicant. Upon the expiration of the term of a patent, the invention, improvement, or importation will become property of the public, and a notice of the expiration is published and deposited in the public library of the state. In the case of the infringement of a patent, the infringer's property shall be confiscated in favor of the patentee, who shall have paid to him the loss and damages proportioned to the extent of the fraud. If the infringement is not proved, the patentee shall be compelled to pay the loss and damage caused

by the apprehension in favor of the defendant, and to pay a fine equal to that which would have been adjudged in case of his conviction. Patents will be vacated for the following reasons:

(1) Where an inventor is found to have hidden in his description the true means for the working of his invention;

(2) Where the inventor is found to have employed secret methods which were not detailed in his specification;

(3) Where an inventor, or he who calls himself such, is proved to have obtained the patent for an invention already described or published by the press within or out of Bolivia; or

(4) When the patentee has allowed a year and a day to elapse since the day when the patent was granted without having put his invention into practical use.

Appendix F.

RATES OF POSTAGE.

Rates of postage chargeable in the United States on mail matter for Bolivia.

[The absence of rates under headings of this table indicates that the correspondence designated by said headings is not transmissible. The condition of optional prepayment in the second column of this table applies only to ordinary letters; other articles must be prepaid.]
